Stratum Dashboards 1.0
A New Enhancement For Stratum.Viewer

Extend Your Stratum Investment With Dashboards

This latest Stratum.Viewer enhancement helps you leverage the info in Stratum, giving you another way to share the reports and graphs already existing in Stratum with key business stakeholders. **If you can use Viewer, you can easily use Dashboards**. Existing content from Stratum.Viewer along with outside information such as websites or blogs can be assembled into one **dashboard that provides a broader picture of business** operations, performance, or other topics important to your organization.

Realize these benefits when you roll out Stratum Dashboards:

- **Focus User Attention** – highlight the most pertinent details for users to keep up with business goals and results.

- **Help Teams Visualize Concepts** – Combine reports with other complimentary content that aids users in understanding key concepts from the larger pool of your business data.

- **Avoid Adding To IT Workload** – Stratum users and admins can independently use Dashboards.

Once created, dashboards can be **shared easily with individuals or groups of users.** Email dashboard links directly to users, incorporate them into Viewer by way of links in user's view groups, or configure them as personalized home pages for users.

Note: Dashboard functionality is available as of version 7.1.1 of Stratum.Viewer. Viewer-authorized users can set up and share dashboards. Contact Silvon Support product.support.usa@silvon.com for info about getting Dashboards.
