Getting Started

Access to Measure Items

Your user profile level controls what you can do with measure items.

User Profile Level	Insert	Edit	Hide	Show	Remove	Rearrange Order in Views	Apply New Sorts/Filters on Them	Edit Existing Sorts/Filters for Them
Casual								x*
Advanced	x	x	x	x	x	x	x	x
View Administrator	x	x	x	x	x	x	x	x
Security Administrator	x	x	x	x	x	x	x	x

***Note:** Casual users can click an existing sort or filter icon to change the sort or filter. They will not see a Sort or Filter option when they right-click in the grid to access the grid pop-up menu.

Introduction to Measure Items

Measure items control the kind of data you see in your views -- sales, accounts receivable, budget, forecast, inventory, etc. Several types of measure items can be created for views, giving you flexibility to pull in data from specific time ranges, from rolling periods of time, or from calculations between multiple pieces of data. The types of measure items you can create are regular measure items with or without time ranges and calculated measure items. You can set up conditional formats, hyperlinks, and pop-up labels on regular and calculated measure items. And you can set up calculated measure items that display images in the grid. In views that have been set up to be planning enabled, you can perform planning on regular measure items.

Examples follow.

Regular Measure Items with Time Ranges

Time ranges can be assigned to regular measure items when the Time Range property for a view is set to Yes. Time ranges can be a single day, weeks, months, or years. Time ranges can be absolute or based. An example of an absolute time range is January 2014 through March 2014. An example of a based time range is the current week of last year through the current week of the current year.

This view has two Daily Sales measure items with time ranges. The time range is the last 90 days, from the current date of September 15 back through June 17.

Regular Measure Items without Time Ranges

Regular measure items without time ranges can be created when the Time Range property for a view is set to No. You can optionally use time hierarchies in these views to group data by absolute or based periods of time, such as the first quarter of each year or a rolling number of periods in time. This view shows Actual Sales data by base year. The view was filtered to focus on the current year.

Calculated Measure Items

Calculated measure items can be set up in all types of views regardless of the Time Range property. Expressions can be built with level members, other measure items, and a wide range of functions such as percent of total or cumulative percent of total. Calculated data items can be set up as distinct if you only want the calculation to be performed once for each level versus for every level member. The view shown in the prior example is shown below with the addition of a percent of total calculation. A conditional format has been applied to the measure item to indicate which products contribute over 5% to the total Sales Amount.

Quick Start - Insert Regular Measure Items

Here is a typical path taken to set up new regular measure items.

1

Right-click the Measure Items folder in viewer explorer, and select [Insert Regular Measure Item](#).

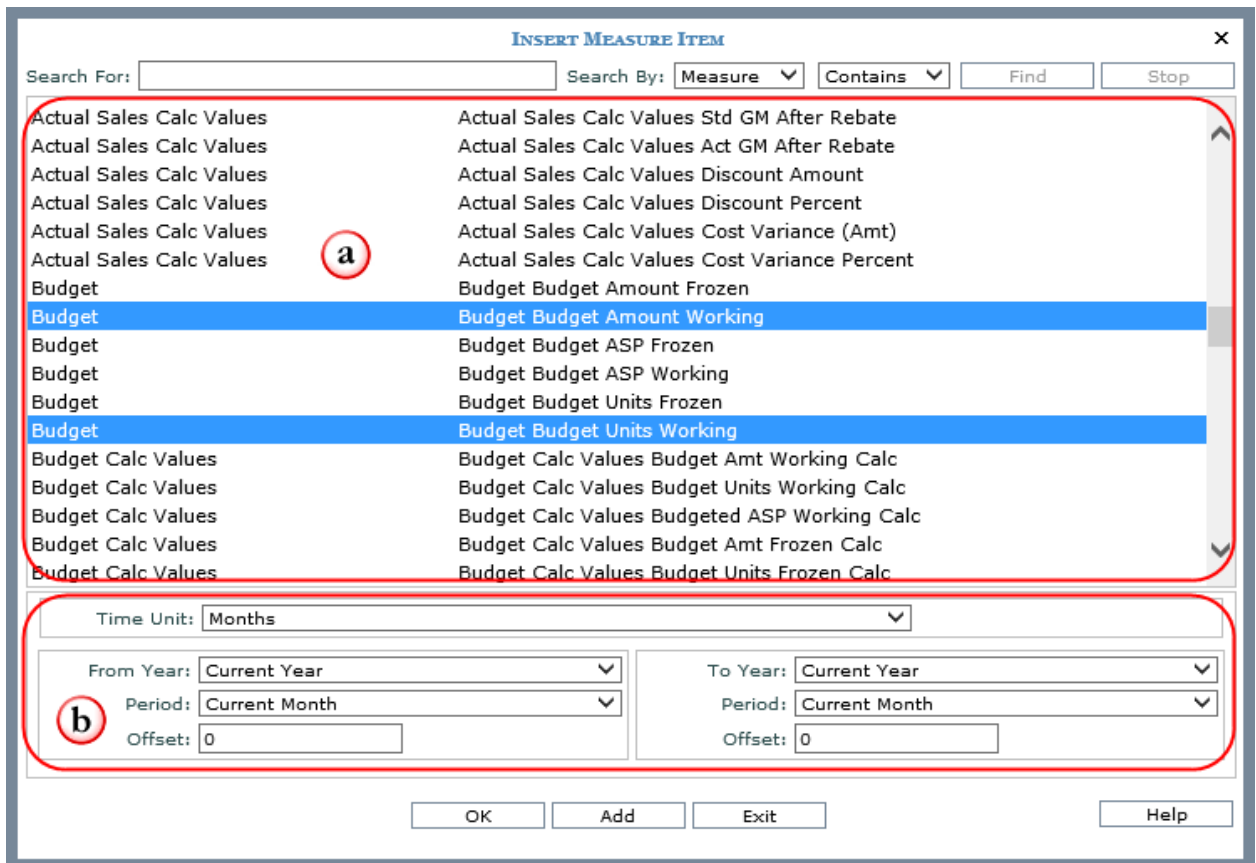

Note: Another option is to right-click the caption for any measure item in the view, and select Insert then select Regular Measure Item.

2

a Select measure and **b** specify time range.

Note: You can select multiple measures at a time to insert into the view. Specifying a time range is only applicable when the Time Ranges property for the Measure Items axis is Yes.

3

Click Add to insert the measure item(s) while leaving the window open to setup additional items.

OR

Click OK to insert the measure item(s) and close the window.

Note: You can optionally customize properties of each inserted measure item. See [Edit a Caption](#) and [Edit Basic Measure Item Properties](#).

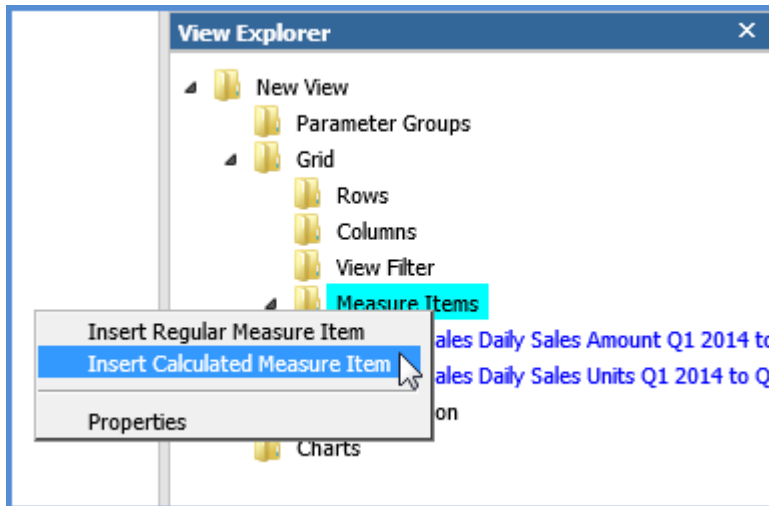

Quick Start - Insert Calculated Measure Items

Here is a typical path taken to set up new calculated measure items.

1

Right-click the Measure Items folder in viewer explorer, and select [Insert Calculated Measure Item](#).

Note: Another option is to right-click the caption for any measure item in the view, and select Insert then select Calculated Measure Item.

2

Set up the expression for the measure item using objects in the view or Analysis Services database and the functions provided.

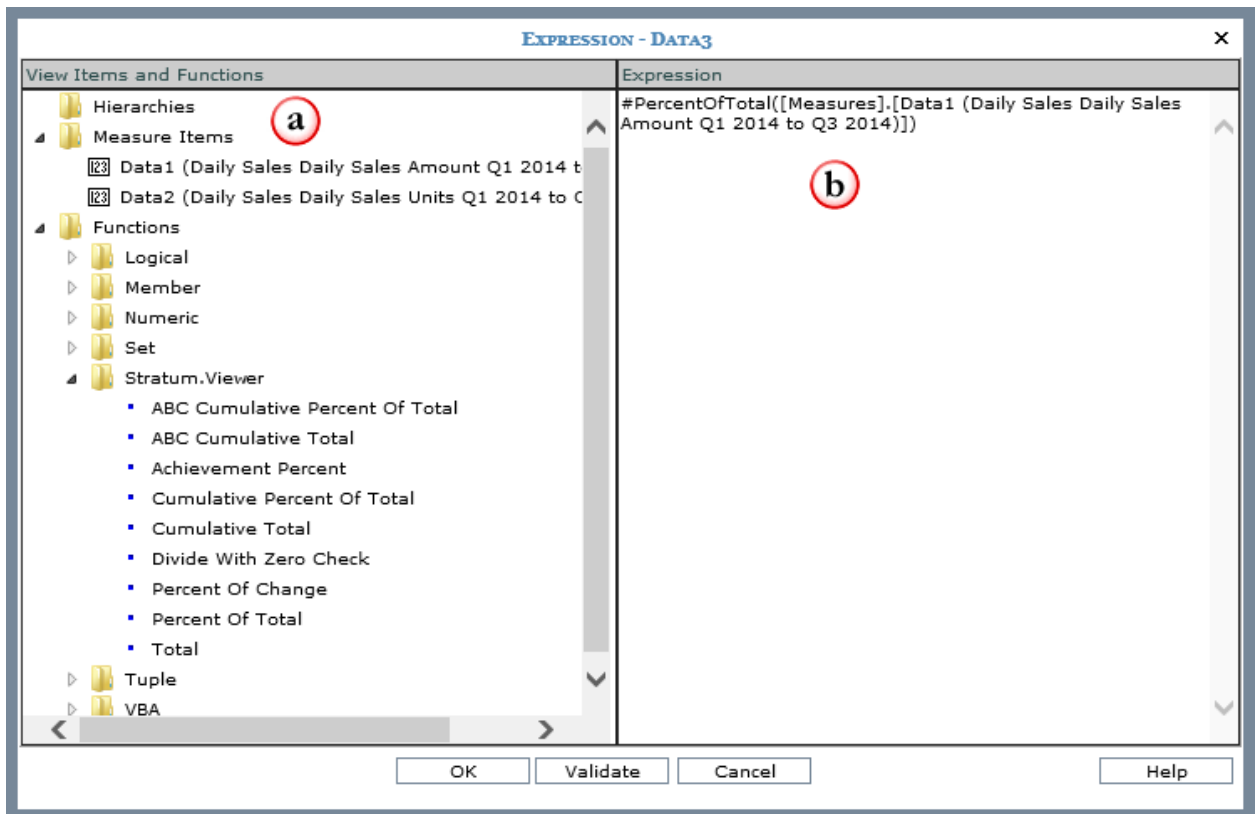

a

Click objects in the View Items and Functions side of the window or drag and drop them into the expression.

b

Manually add objects and make adjustments by typing directly into the Expression side of the window.

Note: See also [Creating Expressions for Calculated Measure Items](#).

3

Click Validate to check the expression then click OK to insert the measure item.

Note: If you skip clicking Validate, the expression will be checked when you click OK.

4

Customize [properties](#) for the measure item. At a minimum, [customize the caption](#) and select a Format String. You can also drag and drop the measure item in view explorer to reposition it within other measure items.

Note: If you want to make this a distinct calculated measure item, select Distinct for the Type.

The screenshot shows the 'View Explorer' window with a tree view. Under 'Measure Items', 'Data3' is selected. Below it, the 'Properties - Data3' dialog box is open. The 'Caption Expression' is set to '[Name]' and the 'Format String' is set to 'None'. Both are circled in red. Other properties include Type: Calculated, Expression: #PercentOfTotal([Measures].[Da...], Value: Yes, Image: No, Conditional Format: No, Pop-up Expression: No, Hyperlink: No, Visible: Yes, Filter: (empty), Sort: None, and Total: Total.

Properties - Data3	
Name	Data3
Caption Expression	[Name]
Type	Calculated
Expression	#PercentOfTotal([Measures].[Da...
Format String	None
Value	Yes
Image	No
Conditional Format	No
Pop-up Expression	No
Hyperlink	No
Visible	Yes
Filter	
Sort	None
Total	Total

Tasks - Inserting

Calculated Measure Items

1. Right-click anywhere in the view or right-click the Measure Items folder in [view explorer](#), and select Insert Calculated Measure Item.
2. In the [Expression window](#), set up the expression by:
 - Clicking or dragging and dropping objects from the View Items and Functions section to the Expression section.
 - Or, by manually entering text in the Expression section.
3. Use the Validate button as needed to check for any errors as you set up the expression.
4. Click OK.
5. {Optional} Customize [properties](#) for the measure item:
 - Edit the caption expression
 - Edit basic properties (name, format string, totals, etc.)
 - Make a measure item "Distinct"

Note: See also [When to Use the "Sum" Total Setting for Measure Items](#).

Regular Measure Items

1. Right-click anywhere in the view or right-click the Measure Items folder in [view explorer](#), and select Insert Regular Measure Item.
2. In the [Insert Measure Item window](#), select the measure that will serve as the basis for your measure item.
 - If needed, use the search fields at the top of the window to narrow down the measures to choose from.
 - To set up multiple measure items at the same time, select multiple measures. You can use Ctrl+Click and Shift+Click to select more than one measure.
3. If there isn't a section for time in the window, go to Step 4.
OR
3. If there is a section for time, use it to set up the time range for the measure item(s). Then go to Step 4. You can leave the properties set to their defaults if that is your desired time range.
 - Use Time Unit to specify the type of time for the range (weeks, months, periods, etc.).
 - Use the From Year, Period, and Offset to specify the starting point for the time range.
 - Use the To Year, Period, and Offset to specify the ending point for the time range.
4. Click Add if you want to insert the measure item(s) while leaving the window open to set up additional measure items.

OR

4. Click OK to insert the measure item(s) and close the window, or click Cancel to cancel the insert.
5. {Optional} Customize other properties for the measure item(s):
 - Edit the caption expression
 - Edit basic properties (name, format string, totals, etc.)

Tasks - Editing

Edit a Measure Item Caption

If the [Properties window](#) for a measure item is open already, skip to Step 2.

1. Right-click the existing caption for the measure item in the view or [view explorer](#), and select Properties.
2. Click the Browse button  next to the Caption Expression field in the Properties window.
3. Use the [Caption Expression window](#) to edit the caption expression.
 - Type static text into the Expression section.
 - Click variables from the Variables folder to use them in the expression.
 - Use the Enter key to insert a new line into the caption. Text or variables entered after the line break will begin on a new line in the rendered caption.
 - Click Evaluate at any time to check the caption that will result from the expression, such as to see how variables used in the expression will look in the rendered caption.
4. Click OK.

See also [Creating Expressions for Captions](#).

Edit Basic Measure Item Properties (name, format string, totals, etc.)

To edit basic properties for individual measure items including the name, format string, hyperlink, pop-up expression, and totals:

1. Right-click the caption for the measure item in the view or [view explorer](#), and select Properties.
2. Change the desired property using the applicable section of the [Properties window](#).

Note: See also [When to Use the “Sum” Total Setting for Measure Items](#).

Edit Expressions for Calculated Measure Items

1. Double-click the caption for the calculated measure item in the view.

OR

1. If the [Properties window](#) for the measure item is open, click the Browse button  next to the Expression field.
2. In the [Expression window](#), make changes by:

- Clicking or dragging and dropping objects from the View Items and Functions section to the Expression section.
 - Or, by manually entering the changes in the Expression section.
3. Use the Validate button as needed to check for any errors in the edited expression.
 4. Click OK.

Edit Measures for Regular Measure Items

See the steps for editing:

- [Measure Items with Time Ranges](#)
- [Measure Items without Time Ranges](#)

See also: [Why isn't there a Section for Time in the Insert/Edit Measure Item Window?](#)

Measure Items with Time Ranges

1. Double-click the caption for the measure item in the view.

OR

1. If the [Properties window](#) for the measure item is open, click the Browse button  next to the Measure field.
2. In the [Edit Measure Item window](#), select one or multiple measure items to edit.
3. Use the Measures drop-down list to select a new measure for the measure item(s).

If needed, use the search button  to open the [Select Measures window](#). Use the window to search for particular types of measures, make your selections, and then click OK or Cancel when you are done to return to the Edit Measure Item window.

4. Click Update to update the selected item(s) and leave the window open to change additional measure items.

OR

4. Click OK to proceed with the edits and close the window.

Measure Items without Time Ranges

1. Double-click the caption for the measure item in the view.
2. In the [Edit Measure Item window](#), select the first measure that you need to edit.
3. Use the Measures drop-down list to select a new measure for the measure item.

If needed, use the search button  to open the [Select Measures window](#). Use the window to search for particular types of measures, make your selection, and then click OK or Cancel when you are done to return to the Edit Measure Item window.

4. Click Update to update the selected item and leave the window open to change additional measure items.

OR

4. Click OK to proceed with the edits and close the window.

Edit the Order of Measure Items

1. In the grid or view explorer, click the caption of the measure item that you want to move and continue holding down the mouse button to display this symbol  followed by the caption.
2. Drag the measure item to the new location and release the mouse button to drop it in that location.
 - If you drop it on the caption of another measure item, it will be positioned **after** that other measure item.
 - If you are working in the grid and want to position the measure item **first** on the measure items axis:
 - If measure items are on columns, drop it on the last header cell on rows
 - If measure items are on rows, drop it on the last header cell on columns.

OR

- If you are working in view explorer and want to position the measure item **first** on the measure items axis, drop it on the Measure Items folder.

Note: If you are working with distinct calculated measure items, you will be permitted to only drop the items before or after all regular or calculated measure items.

Edit Time Ranges for Regular Measure Items

1. Double-click the caption for the measure item in the view.

OR

1. If the [Properties window](#) for the measure item is open, click the Browse button  next to the Measure field.
2. In the [Edit Measure Item window](#), select one or multiple measure items to edit.
3. Use the time properties that remain enabled to change the time range for the selected measure item(s).
4. Click Update to update the selected item(s) and leave the window open to change additional measure items.

OR

4. Click OK to proceed with the edits and close the window, or click Cancel to cancel the edits.

Hide or Show Measure Items

Hide

Use one of these options:

- Right-click the caption for the measure item in the view or [view explorer](#), and select Hide.
- In the properties window for the measure item, change the Visible property to No.

Show

Use one of these options:

- Drag the measure item from view explorer and drop it in the desired location in the grid.
- Right-click the caption for the measure item in [view explorer](#), and select Show.
- In the properties window for the measure item, change the Visible property to Yes.

Remove Measure Items

1. Right-click the caption for the measure item in the view or [view explorer](#), and select Remove.
2. When prompted to confirm the deletion, click OK. Or click Cancel to cancel the change.

See also: [What Happened to a Measure Item that Used to be in my View?](#)

Examples

Creating Expressions for Calculated Measure Items

These tables have example expressions that can be used as models when you are [setting up](#) expressions for calculated measure items.

Note: If you want to set up views that return YTD data, comparisons of current vs past periods, rolling N periods, previous N periods, etc., do so using regular measure items with time ranges. Examples are in [Using Time Ranges vs. Time Hierarchies in Views](#). If you want to set up a calculated measure item that displays an image, see [Display Images for Measure Items](#).

Calculations with Stratum.Viewer Functions

Type of Calculation & Function	Example																																																																
<p>Achievement Percent</p> <p><i>Has a built-in divide by zero check to avoid divide by zero errors.</i></p>	<p>#AchievementPercent([Measures].[Data1 (Actual Sales Sales Amount Q1 2014 to Q3 2014)], [Measures].[Data2 (Budget Budget Amount Frozen Q1 2014 to Q3 2014)])</p> <ul style="list-style-type: none"> Returns the achievement percentage between two measure items -- in this case, the percent of sales achieved in comparison to the budgeted sales. The expression for this function is Measure Item 1 / Measure Item 2 with a divide by zero check. The divide by zero check will return null if Measure Item 2, the divisor, is zero or null. The expression syntax includes the names (Data1 and Data2) and captions of the specified measure items. Recommendations: select a percentage Format String and set Total property to None. <div data-bbox="391 1129 1385 1934" style="border: 1px solid black; padding: 5px;"> <p>View Name: Achievement Percentage</p> <p>View Filter</p> <table border="1"> <thead> <tr> <th>Ship-To Territory >></th> <td>1103</td> </tr> <tr> <th>STerr Long Description</th> <td>Midlantic</td> </tr> <tr> <th>Product</th> <th>Actual Sales Amount Q1 2014 to Q3 2014</th> <th>Budget Amount Q1 2014 to Q3 2014</th> <th>Achievement Percentage</th> </tr> </thead> <tbody> <tr><td>Peach 6oz LnchPk BR* 5B</td><td>\$1,112,705</td><td>\$1,362,841</td><td>82%</td></tr> <tr><td>Peach 6oz LnchPk BR* 5J</td><td>\$1,001,435</td><td>\$1,226,557</td><td>82%</td></tr> <tr><td>Peach 6oz LnchPk BR* 5I</td><td>\$945,799</td><td>\$1,158,415</td><td>82%</td></tr> <tr><td>Pear 6oz LnchPk LS 5B</td><td>\$963,526</td><td>\$1,164,594</td><td>83%</td></tr> <tr><td>Applesauce 12oz PL* 5B</td><td>\$801,970</td><td>\$952,817</td><td>▲ 84%</td></tr> <tr><td>Peach 6oz LnchPk BR* 5H</td><td>\$890,164</td><td>\$1,090,273</td><td>82%</td></tr> <tr><td>Peach 6oz LnchPk BR* 5G</td><td>\$834,529</td><td>\$1,022,131</td><td>82%</td></tr> <tr><td>Pear 6oz LnchPk LS 5J</td><td>\$867,173</td><td>\$1,048,134</td><td>83%</td></tr> <tr><td>Pnappl Slcs 12 oz BR* 5B</td><td>\$815,069</td><td>\$963,263</td><td>▲ 85%</td></tr> <tr><td>Applesauce 12oz PL* 5J</td><td>\$721,773</td><td>\$857,535</td><td>▲ 84%</td></tr> <tr><td>Peach Slcs LS 12oz BR* 5B</td><td>\$792,978</td><td>\$935,409</td><td>▲ 85%</td></tr> <tr><td>Pear 6oz LnchPk LS 5I</td><td>\$818,997</td><td>\$989,905</td><td>83%</td></tr> <tr><td>Peach 6oz LnchPk BR* 5F</td><td>\$778,894</td><td>\$953,989</td><td>82%</td></tr> <tr><td>Applesauce 106oz PL* 5B</td><td>\$966,960</td><td>\$1,150,830</td><td>▲ 84%</td></tr> </tbody> </table> </div>	Ship-To Territory >>	1103	STerr Long Description	Midlantic	Product	Actual Sales Amount Q1 2014 to Q3 2014	Budget Amount Q1 2014 to Q3 2014	Achievement Percentage	Peach 6oz LnchPk BR* 5B	\$1,112,705	\$1,362,841	82%	Peach 6oz LnchPk BR* 5J	\$1,001,435	\$1,226,557	82%	Peach 6oz LnchPk BR* 5I	\$945,799	\$1,158,415	82%	Pear 6oz LnchPk LS 5B	\$963,526	\$1,164,594	83%	Applesauce 12oz PL* 5B	\$801,970	\$952,817	▲ 84%	Peach 6oz LnchPk BR* 5H	\$890,164	\$1,090,273	82%	Peach 6oz LnchPk BR* 5G	\$834,529	\$1,022,131	82%	Pear 6oz LnchPk LS 5J	\$867,173	\$1,048,134	83%	Pnappl Slcs 12 oz BR* 5B	\$815,069	\$963,263	▲ 85%	Applesauce 12oz PL* 5J	\$721,773	\$857,535	▲ 84%	Peach Slcs LS 12oz BR* 5B	\$792,978	\$935,409	▲ 85%	Pear 6oz LnchPk LS 5I	\$818,997	\$989,905	83%	Peach 6oz LnchPk BR* 5F	\$778,894	\$953,989	82%	Applesauce 106oz PL* 5B	\$966,960	\$1,150,830	▲ 84%

Divide with Zero Check

Has a built-in divide by zero check to avoid divide by zero errors.

#DivideWithZeroCheck([Measures].[Data1 (Daily Sales Amount Wk 38 2014 to Wk 38 2014)], [Measures].[Data2 (Daily Sales Units Wk 38 2014 to Wk 38 2014)])

- Divides two numbers with a divide by zero check.
- The expression for this function is Measure Item 1 / Measure Item 2 with a divide by zero check. The divide by zero check will return null if Numeric Expression 2, the divisor, is zero or null.
- The expression syntax includes the names (Data1 and Data2) and captions of the specified measure items.

Percent of Change

Has a built-in divide by zero check to avoid divide by zero errors.

#PercentOfChange([Measures].[Data1 (Actual Sales Amount Q1 2013 to Q3 2013)], [Measures].[Data2 (Actual Sales Sales Amount Q1 2012 to Q3 2012)])

- Returns the percent of change, also known as the variance percentage, between two measure items or expressions -- in this case, the change between YTD sales for two different years.
- The expression for this function is (Measure Item 1 - Measure Item 2) / Measure Item 2 with a divide by zero check. The divide by zero check will return null if Measure Item 2, the divisor, is zero or null.
- The expression syntax includes the names (Data1 and Data2) and captions of the specified measure items.
- Recommendations: select a percentage Format String and set Total property to None.

<p>Extended List Price</p> <p>Uses attribute relationship.</p>	<p>IIF([Product].[Product].CurrentMember.Level.Name="Product",[Product].[Product].Properties("Prod Current List Price") * [Measures].[Data5 (Daily Sales Units Jan 2014 to Sep 2014)], null)</p> <ul style="list-style-type: none"> If the Product level is visible, then the following calculation is performed: [Product].[Product].Properties("Prod Current List Price") * [Measures].[Data5 (Daily Sales Units Jan 2014 to Sep 2014)]. This returns the extended list price by multiplying the Prod Current List Price attribute relationship from the Product level by the Daily Sales Units Jan 2014 to Sep 2014 measure. If the Product level is not visible in the view, the calculation will not be performed and a null value (empty cell) will be returned. The IIF and [Product].[Product].CurrentMember.Level.Name="Product" syntax check for the visibility of the level to which the attribute relationship belongs. The syntax for the measure item used in the expression includes its name (Data5) and caption. The name of the Product level and its hierarchy are included in the syntax. Recommendation: select a monetary Format String. <p>Related views are shown on the next page.</p>																																																																																				

Here is the view when the Product level is visible. The calculation is performed.

Number of Products Sold and Total Number of Products

Uses Count numeric function and CrossJoin function.

Count(CrossJoin({[UPC Global Number].[UPC Global Number].[UPC Global Number].members},{[Measures].[Data2 (Sales Amount Q3 2014 to Q3 2014)]}),EXCLUDEEMPTY)

and

Count(CrossJoin({[UPC Global Number].[UPC Global Number].[UPC Global Number].members},{[Measures].[Data2 (Sales Amount Q3 2014 to Q3 2014)]}),INCLUDEEMPTY)

- The first calculation counts the number of UPC's that have sales. The EXCLUDEEMPTY text is the part of the expression that will exclude UPC members without any sales from the count.
- The second calculation counts the total number of UPC's that exist including those with and without sales. The INCLUDEEMPTY text is the part of the expression that will include UPC members without any sales in the count.
- The MDX for the UPC Global Number level includes the level name and names of its dimension and hierarchy. The level is analyzed against sales amount values for the third quarter 2014, and the syntax for that part of the expression includes the measure item name (Data2) and caption.
- Recommendation: leave the Format String set to None and set Total property to None.

Profit (Sales after Costs)

and

Sales after Returns

Uses Absolute value of a measure item.

[Measures].[Data2 (Actual Sales Sales Amount)]-[Measures].[Data1 (Actual Sales Ext Standard Cost)]

and

[Measures].[Data2 (Actual Sales Sales Amount)]-abs([Measures].[Data4 (Actual Sales Sales Return Amount)])

- The first expression returns the profit, the total sales after costs. The syntax for the two measure items used in the calculation includes their captions and names (Data2 and Data1).
- The second expression returns the sales after returns. The syntax for the two measure items used in the calculation includes their names (Data2 and Data4) and captions. That part of the expression also uses the Abs function to use the absolute value of returns in the calculation.

Return Text Value if Condition is Met

Uses IIF function to check for conditions and determine which results to return.

IIF([Measures].[Data22 (Actual Sales Sales Units Jan to Dec)]>[Measures].[Data2 (Budget Budget Units Frozen Jan to Dec)],"y",null)

- Uses the IIF function to set up an If/Then/Else scenario. If the specified condition is true, then the first specified value will be returned. Otherwise (else), a null value will be returned. In this case, the condition checked for is whether or not Actual Sales Sales Units are greater than Budget Budget Units Frozen. The calculation returns a "y" (for Yes) if the condition is true. If the condition is not true, the calculation returns a null value (empty cell).
- The syntax for the two measure items in both examples includes their names (Data22 and Data2) and captions.
- Recommendations: leave Format String set to None. You can use a variety of values for the returned text, such as a letter or word, based on what best suits your view needs. In this case, null is recommended as the second (Else) value to prevent otherwise empty rows or columns from displaying. For example, if a row is hidden by relationship and empty filter because it has no sales or budget data, it would display if you set the second value in the expression to a 0 or "n" because those results would be considered a value by the relationship and empty filter. Using null as we did keeps results in an empty cell for such rows and therefore the rows will remain hidden.

Standard Cost

Uses Val function and attribute relationship. IIF function checks for presence of the level to which attribute relationship belongs.

IIF([Product].[Product].CurrentMember.Level.Name="Product",Val([Product].[Product].Properties("Prod Std Cost Last Year")*[Measures].[Data2 (Actual Sales Units)], null)

- If the Product level is visible in the view, then the following calculation is performed: Val([Product].[Product].Properties("Prod Std Cost Last Year")*[Measures].[Data2 (Actual Sales Units)]). This returns the standard cost for last year and uses the Prod Std Cost Last Year attribute relationship multiplied by the Actual Sales Units to determine the results. If the Product level is not visible in the view, the calculation will not be performed and a null value (empty cell) will be returned.
- The IIF and [Product].[Product].CurrentMember.Level.Name="Product" syntax check for the visibility of the level to which the attribute relationship belongs. The syntax for the measure item used in the expression includes its name (Data2) and caption.
- Recommendation: select a monetary Format String.

The next page shows the view when the Product level is visible. The calculation is performed.

<p>Variance Percentage</p>	<p>Use the Percent of Change function when you want to include a variance percentage calculation in your view. That function is a Stratum.Viewer function that automatically includes a divide by zero check in the calculation to avoid divide by zero errors. See the first table in this topic for an example.</p>																																																																																																																																																																																														

Days Until Expiration

Uses the Date Difference function in combination with the Today date function and an attribute relationship.

DateDiff("d", Now(), [Lot].[Lot].Properties("Lot Expiration Date"))

- Returns the days until items expire, in this case, Lots. This calculation was built by selecting the Date Difference function, specifying "d" to calculate the difference in days, then selecting the Today function (which returned the Now() syntax), and finally selecting the Lot Expiration Date attribute relationship from the Lot level. The Date Difference and Today functions are in the VBA folder of the [Expression window](#).
- The current date in this case was August 15, 2014. The difference between that date and the Lot Expiration Date gives us the results in the Days Until Expiration date column in the example that follows.
- Recommendations: leave the Format String set to None and set the Total property to None.

Notes: Results returned with negative numbers mean the expiration date has already been passed and it occurred the specified number of days ago. This example happens to calculate the "days" until expiration; therefore, it uses the parameter of "d" in the Date Difference function. Here are other parameters that can be used for calculations that involve other intervals of time: yyyy for year, q for quarter, m for month, y for day of year, d for day, w for weekday, ww for week, h for hour, m for minute, and s for second.

Creating Expressions for Captions

Examples of caption expressions that use different combinations of variables and static text are shown on the following pages. Examples are shown for all types of measure items -- regular with time ranges, regular without time ranges, and calculated. Caption expressions can include a combination of the following elements or just one of these elements, whatever your preference:

- Variables that specify the type of data to return such as the name of the underlying measure, the long description of the From and To periods for time ranges, or the name and description of conditional formats applied to the measure items. Stratum.Viewer evaluates the variables when you run a view and pulls in the proper data from the most current data in Analysis Services database on which the view was built.
- Static text that remains the same each time the view is executed.
- Line breaks that place different parts of the caption on separate lines. If you don't use line breaks, only text wrapping will control the caption display. Line wrapping updates automatically as the size of the grid area or browser changes.

Measure Items with Time Ranges

Here are the properties for a measure item with a time range. The measure item is based on the Daily Sales Daily Sales Amount measure from the Daily Sales category.

The screenshot shows the 'INSERT MEASURE ITEM' dialog box. At the top, there is a search bar with 'daily' entered, and search criteria set to 'Measure' and 'Contains'. Below the search bar is a table with two columns: 'Category' and 'Measure'. The table contains two rows: 'Daily Sales' with 'Daily Sales Daily Sales Amount' and 'Daily Sales' with 'Daily Sales Daily Sales Units'. Below the table is a pagination control showing '1 to 2 of 2' and navigation arrows. At the bottom of the dialog, there are configuration options for the time range, which are highlighted with a red oval. These options include 'Time Unit' set to 'Months', 'From Year' set to 'Current Year', 'To Year' set to 'Current Year', 'Period' set to 'January' on the left and 'Current Month' on the right, and 'Offset' set to '0' for both sides. At the very bottom, there are buttons for 'OK', 'Add', 'Exit', and 'Help'.

Period: January Period: Current Month

Offset: 0 Offset: 0

OK Add Exit Help

Here are some examples of caption expressions that were set up for the measure item and what each executed caption looked like in the view. In these examples, the current year is 2014 and the current month is September. The time elements in the evaluated captions reflect that current state of the data. Variables are the parts of the expressions that have brackets [] around them.

Measure Items without Time Ranges

Here are the properties for a measure item without time ranges. This measure item also is based on the Daily Sales Daily Sales Amount measure from the Daily Sales category.

The screenshot shows a dialog box titled "INSERT MEASURE ITEM" with a close button (X) in the top right corner. At the top, there is a search interface with a "Search For:" text box containing the word "daily", a "Search By:" dropdown menu set to "Measure", a "Contains" dropdown menu, and "Find" and "Stop" buttons. Below this is a table with two columns: "Category ▲" and "Measure". The table contains two rows: the first row is highlighted in blue and shows "Daily Sales" under Category and "Daily Sales Daily Sales Amount" under Measure; the second row shows "Daily Sales" under Category and "Daily Sales Daily Sales Units" under Measure. Below the table, there is a pagination control showing "1 to 2 of 2" and navigation arrows. At the bottom of the dialog box, there are four buttons: "OK", "Add", "Exit", and "Help".

Here is the same calculated measure item with a conditional format applied to it. The conditional format is named Track Below 5% and it displays a yellow arrow when percent of total is below 5%. The next example shows the grid after edits were made to the caption expression, including using the Conditional Format Name variable in the expression.

Displaying Indicators in Views

You can apply conditional formats to measure items. They provide the ability to visually represent and highlight data in the Viewer grid using indicators that are based on a predefined set of criteria. Conditional formats are applied by setting the Conditional Format property for a measure item to Yes and then using the Select Conditional Format window.

This view has a conditional format applied to highlight ranges of gross margin values. A green, yellow, or red indicator arrow will display depending on the measure item value. Additionally, values that fall into the red conditions are highlighted with a yellow background. The value is hidden but displayed in the measure item pop-up label.

Using Time Ranges vs. Time Hierarchies in Views

The following table lists examples of when to use time ranges and when to use time hierarchies to achieve various types of time analysis in views. In most cases, you can achieve the desired analysis using time ranges. Views showing these examples are on the next few pages.

Time Ranges used to...	Time Hierarchies used to...
<ul style="list-style-type: none"> Compare Different Measures at the Same Point in Time – Current Week/Current Year, Weeks YTD, and Previous 3 Months views. Compare the Same Measure at Different Points in Time – Current Week, Current Month, and YTD view; Variance Current Month and YTD Last Year/Current Year view; and Period 26 – 33 in 2012, 2013, 2014 view. Display Trending Data – Rolling 12 Weeks and Current Year by Month views. 	<ul style="list-style-type: none"> Display Trending Data – Last Year/Current Year by Month and All Years by Month views.

Compare Different Measures at the Same Point in Time

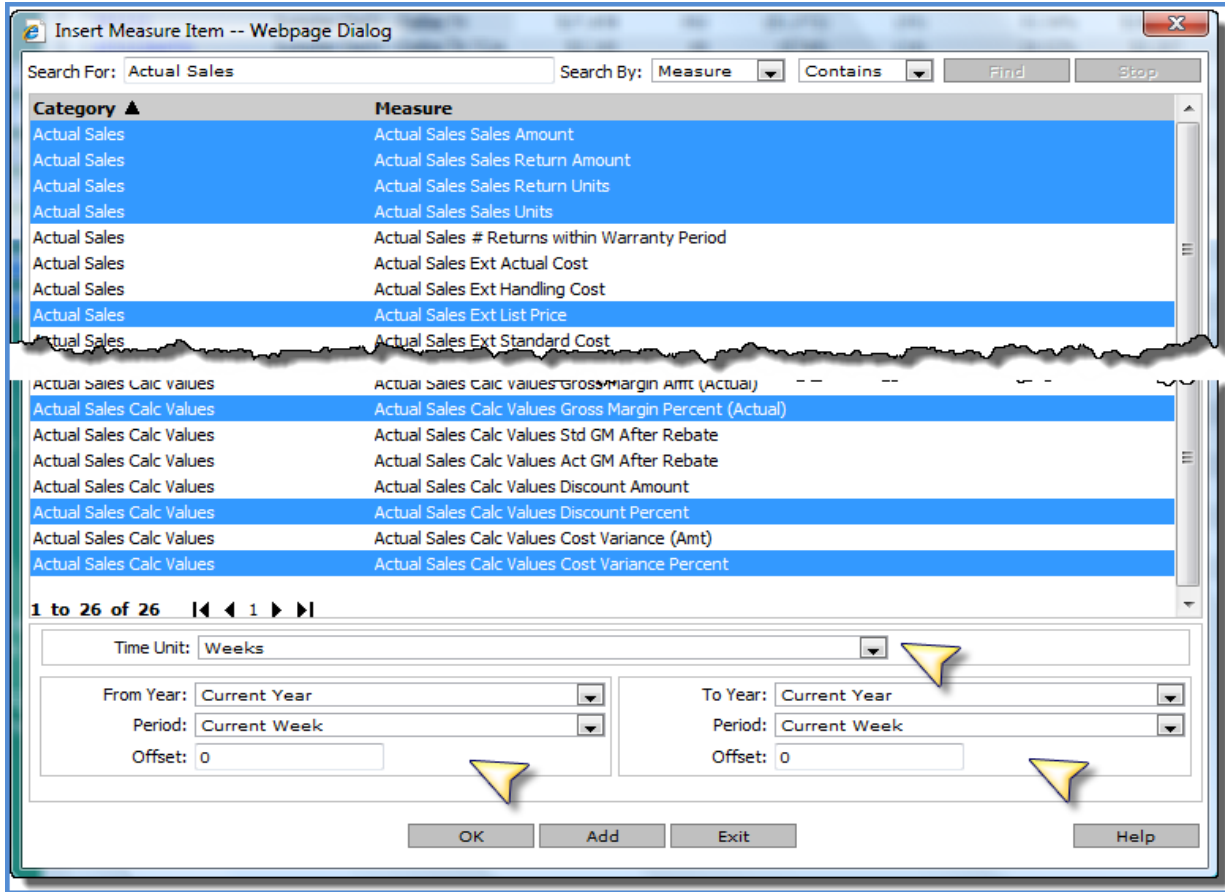

Example 1 – Current Week/Current Year

This view displays measure items based on different Actual Sales measures, and all are for the same point in time – the current week of the current year (in this case, Week 38 of 2014).

The screenshot shows a software interface with a toolbar at the top containing icons for save, print, search, and other functions. Below the toolbar, the view name is 'Ship-To Sales Current Wk Current Yr' and the view filter is empty. The main data table has the following columns:

Customer Ship-To	Actual Sales Sales Amount Wk 38 2014 to Wk 38 2014	Actual Sales Sales Return Amount Wk 38 2014 to Wk 38 2014	Actual Sales Sales Return Units Wk 38 2014 to Wk 38 2014	Actual Sales Sales Units Wk 38 2014 to Wk 38 2014	Actual Sales Ext List Price Wk 38 2014 to Wk 38 2014	Actual Sales Calc Values Gross Margin Percent (Actual) Wk 38 2014 to Wk 38 2014	Actual Sales Calc Values Discount Percent Wk 38 2014 to Wk 38 2014	Actual Sales Calc Values Cost Variance Percent Wk 38 2014 to Wk 38 2014

Offsets were used to define part of the time range for the measure items. The “From” point in time was defined by specifying a -3 offset to the Current Month of the Current Year. Here are the rest of the time range properties:

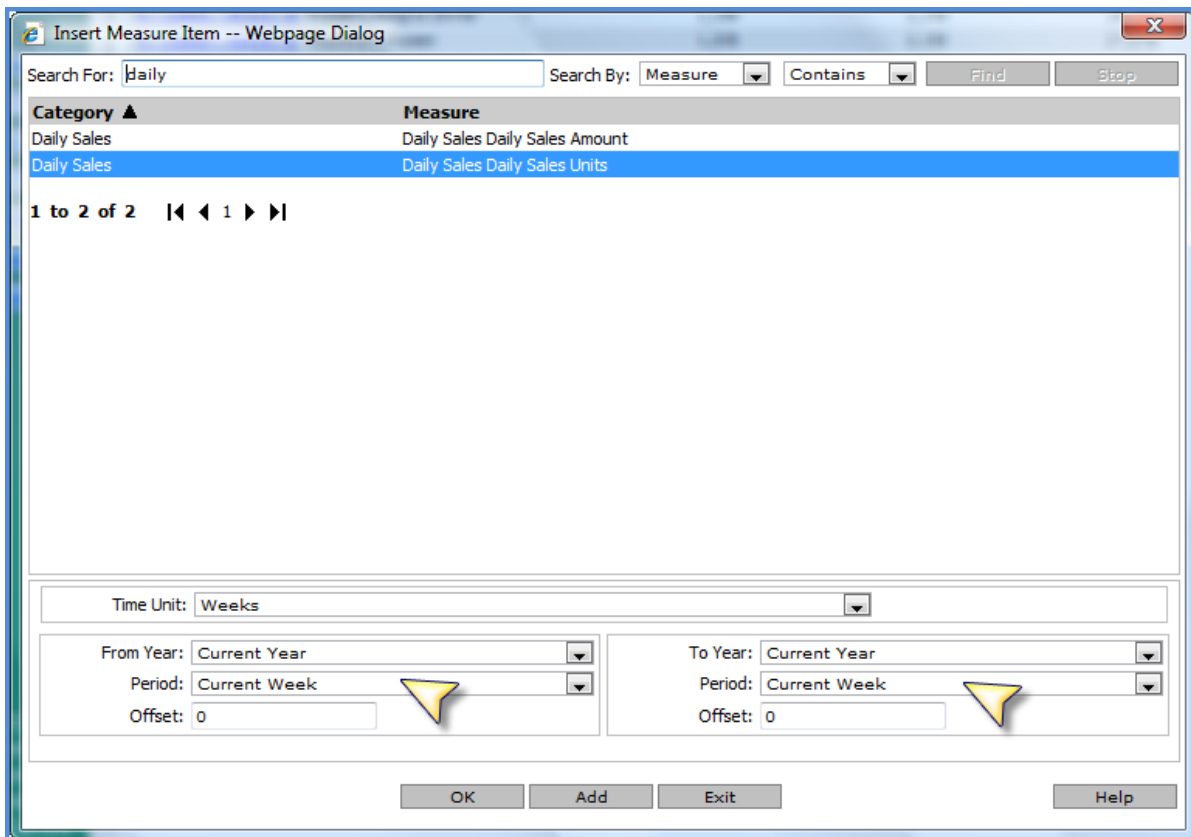

Compare the Same Measure at Different Points in Time

Example 1 – Current Week, Current Month, and YTD

All the measure items in this example are based on the Daily Sales Daily Sales Units measure. The different points in time being analyzed are current week, current month, and YTD – in this case Week 38, September, and January 1 through September 15 of 2014.

For current month current year:

For YTD last year:

For YTD current year:

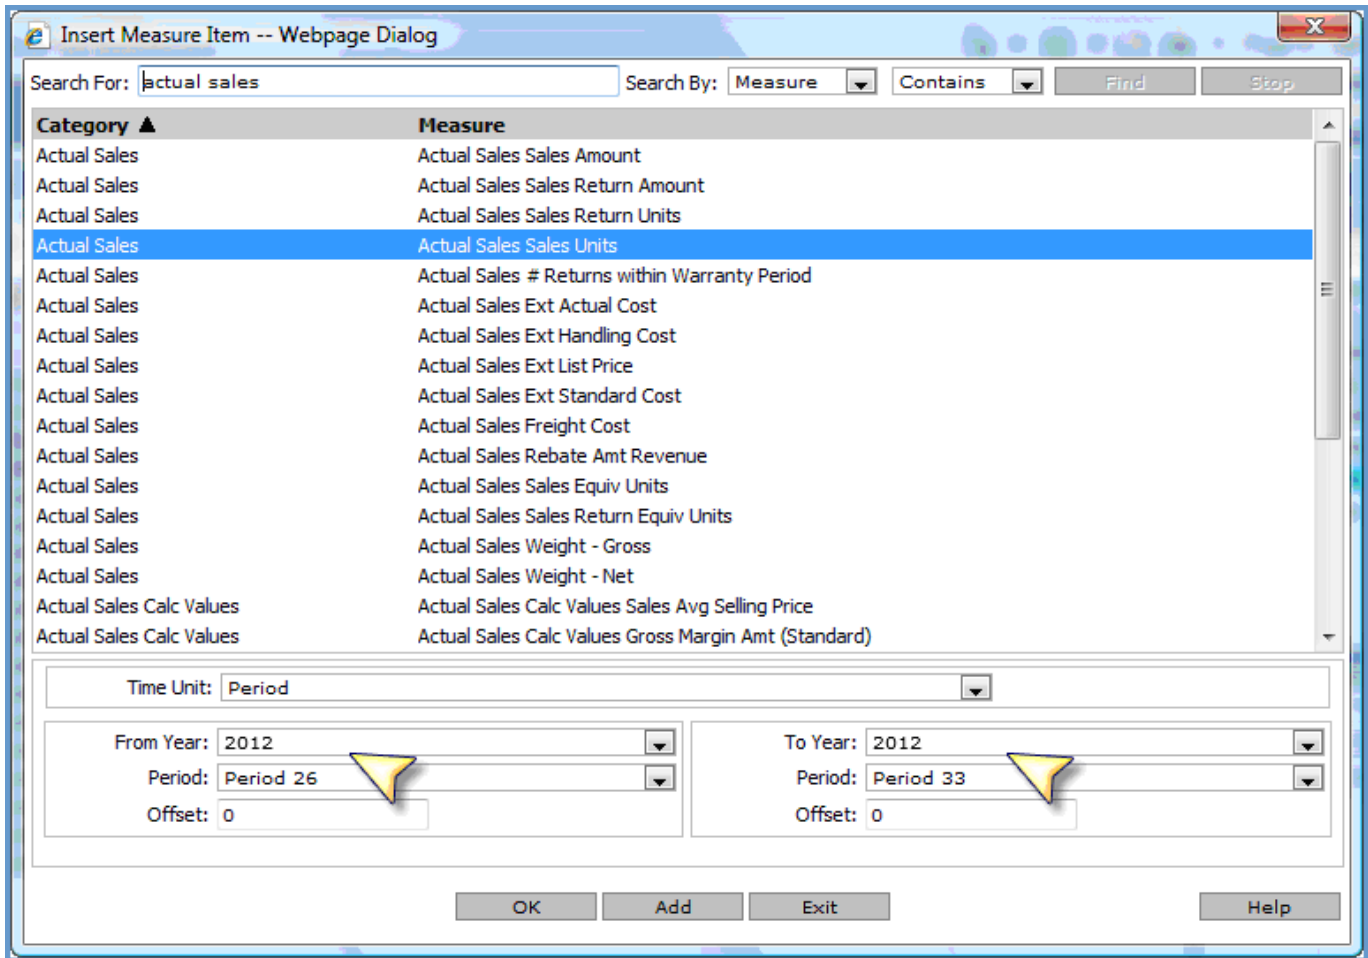

Example 3 – Period 26 – 33 in 2012, 2013, 2014

All measure items in this view are based on the Actual Sales Sales Units measure. The same periods for several different years are being analyzed – Period 26 through 33 in 2012, 2013, and 2014. That type of analysis is helpful for comparing unique periods of time year by year, such as comparing seasonal sales promotions year by year.

UPC Global Number	UPC Long Description	Actual Sales Sales Units Per26 2012 to Per33 2012	Actual Sales Sales Units Per26 2013 to Per33 2013	Actual Sales Sales Units Per26 2014 to Per33 2014

Time range properties for the current week were:

Offsets to the Current Week of the Current Year were used to create the rest of the measure items. For example, the From and To offsets were both set to -1 for the prior week measure item (Week 36), were set to -2 for the 2 weeks ago measure item (Week 35), and so on through using -11 From and To offsets for the 12 weeks ago measure item (Week 26).

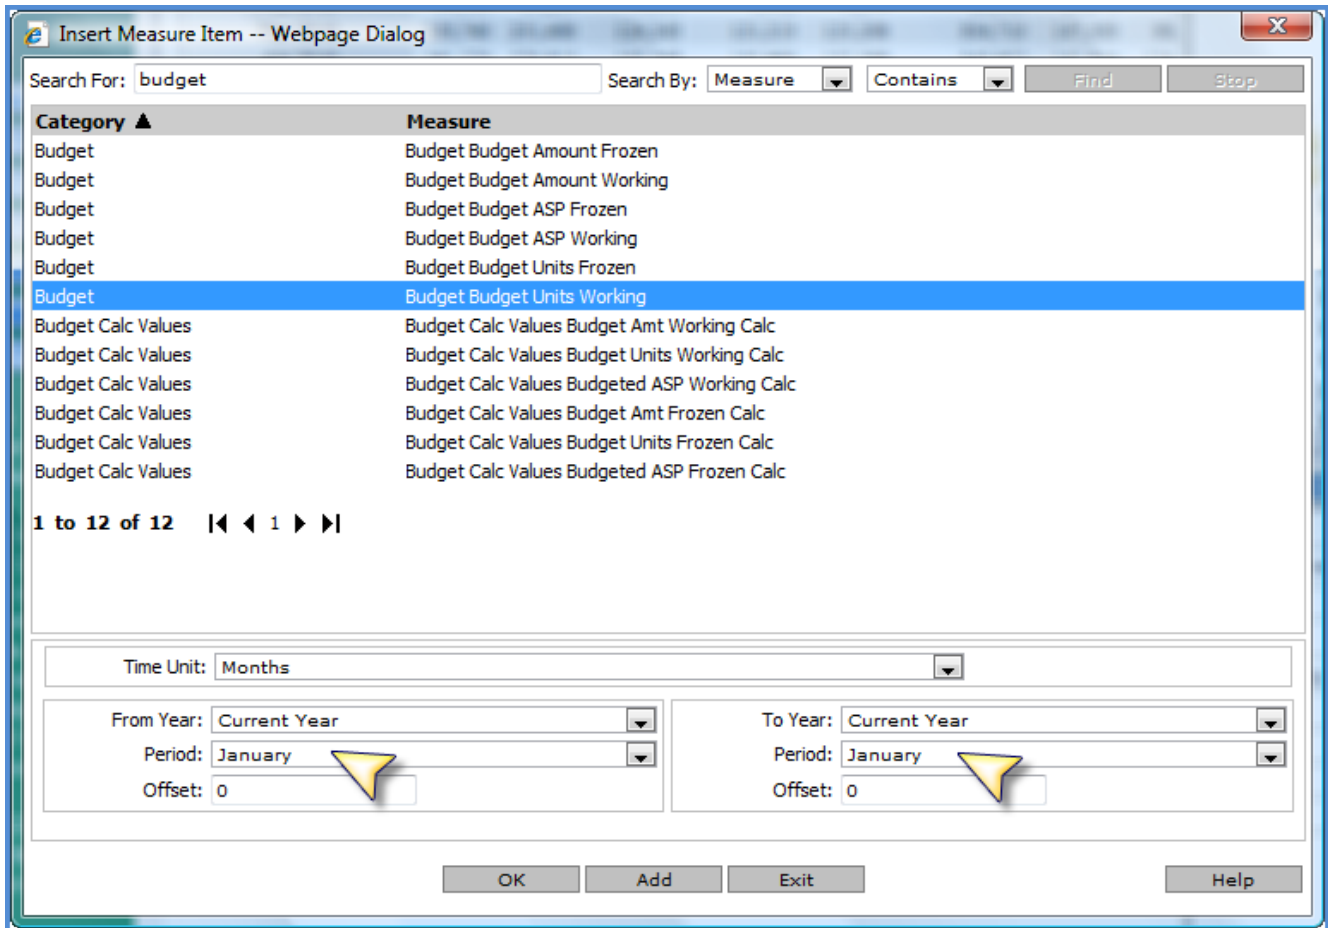

Example 2 – Current Year by Month

This view shows budget data by month for the current year only – January through December of 2014.

Caption Expression Window

This window can be accessed from two different locations. If accessed from the Application window, you can set the default caption expressions that Stratum.Viewer will apply whenever a user adds a new measure item to a view. When accessed from the Measure Item Properties window, you can adjust the caption expression for the selected measure item.

1

Variables – You can click these variables to use them in your expression.

Regular Measure Item with Time Range – Valid variables when Time Range = “Yes.”

Variable Name	Description
Name	Resolves to the name of the measure item.
Category	Resolves to the category of the selected measure for the measure item.
Measure	Resolves to the name of the selected measure for the measure item.
From Period Short Desc	Resolves to the Stratum.Planner ViewSetItem short description associated with the From Period of the Measure Item. If the From Period uses a based time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
From Period Long Desc	Resolves to the Stratum.Planner ViewSetItem long description associated with the From Period of the Measure Item. If the From Period uses a based time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.

From Year YY	Resolves to the last 2 positions of “Year” from the ViewSetItem in Stratum.Planner associated with the From Year of the Measure Item. If the From Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
From Year YYYY	Resolves to the “Year” from the ViewSetItem in Stratum.Planner associated with the From Year of the Measure Item. If the From Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
From Year Long Desc	Resolves to the Long Description from the Year ViewSetItem in Stratum.Planner associated with the From Year of the Measure Item. If the From Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
To Period Short Desc	Resolves to the Stratum.Planner ViewSetItem short description associated with the To Period of the Measure Item. If the To Period uses a based time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
To Period Long Desc	Resolves to the Stratum.Planner ViewSetItem long description associated with the To Period of the Measure Item. If the To Period uses a based time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
To Year YY	Resolves to the last 2 positions of “Year” from the ViewSetItem in Stratum.Planner associated with the To Year of the Measure Item. If the To Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
To Year YYYY	Resolves to the “Year” from the ViewSetItem in Stratum.Planner associated with the To Year of the Measure Item. If the To Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
To Year Long Desc	Resolves to the Long Description from the Year ViewSetItem in Stratum.Planner associated with the To Year of the Measure Item. If the To Year uses a based hierarchy, the corresponding absolute time hierarchy, then resolves to the ViewSetItem of the associated absolute time hierarchy.
Conditional Format Name	Resolves to the name of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.
Conditional Format Description	Resolves to the description of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.

Regular Measure Item without Time Range – Valid variables when Time Range = “No.”

Name	The name of the measure item.
Category	The category of the selected measure for the measure item.
Measure	The name of the selected measure for the measure item.
Conditional Format Name	Resolves to the name of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.
Conditional Format Description	Resolves to the description of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.

Calculated Measure Item – Valid variable for calculated and distinct calculated measure items.

Name	The name of the measure item.
Conditional Format Name	Resolves to the name of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.
Conditional Format Description	Resolves to the description of a condition format that has been applied to the measure item. If this variable is used and no conditional format has been applied, a blank space holder will display in the resolved expression for the measure item.

2

Expression – Define or modify the expression by clicking on a variable. The selected variable will display under the Expression on the right side of the window. Also, you can manually enter static text in the Expression portion of the window. The Enter key inserts a new line within the caption. This gives you more control over how the caption will display.

3

Caption – Displays the evaluated caption so you can verify what the caption will look like. This area is updated when Evaluate is clicked.

4

Evaluate – The caption will display under the Caption area once Evaluate is clicked. You can review the caption before accepting it.

Edit Measure Item Window

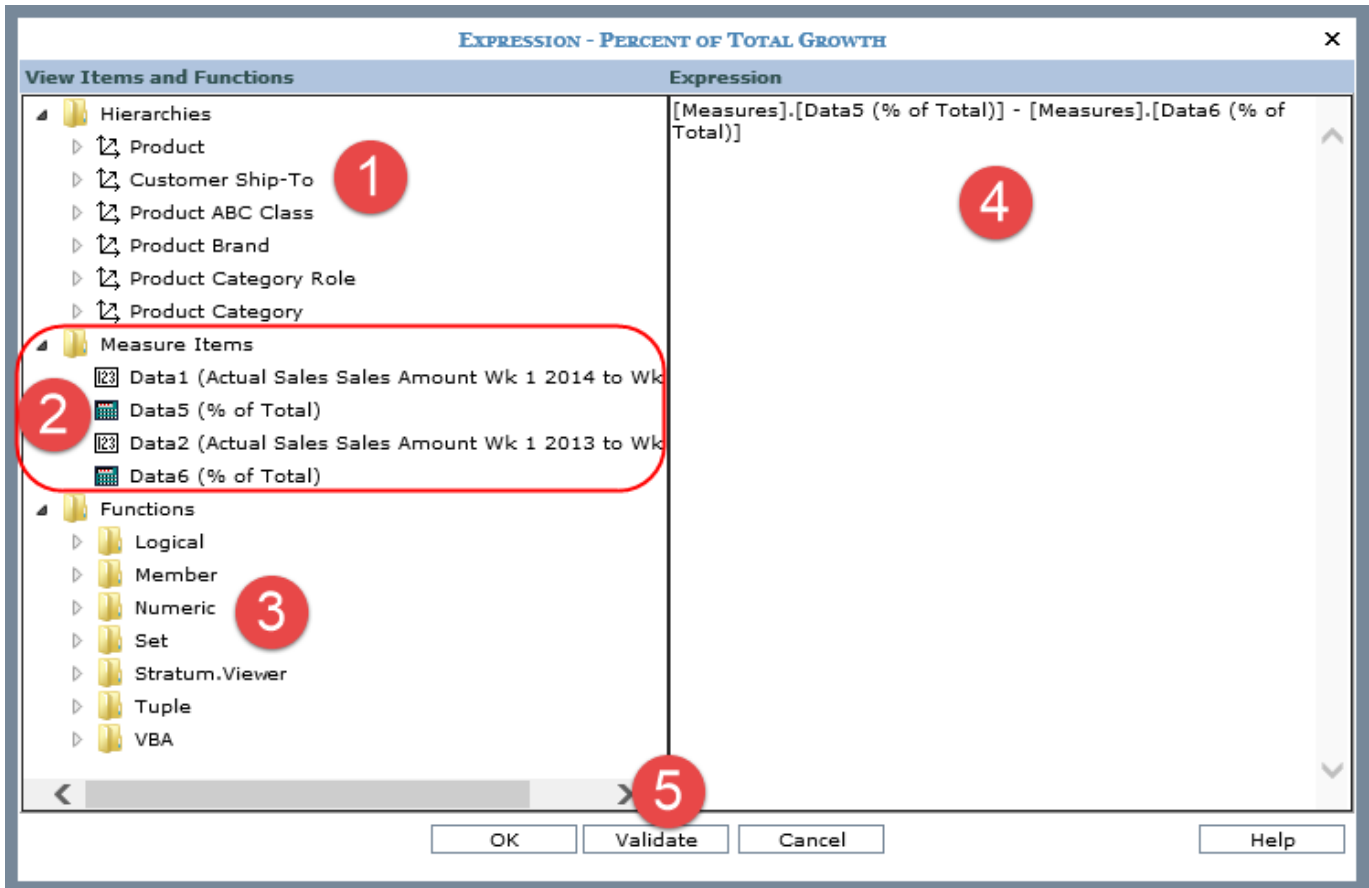

<p>1</p>	<p>Measure Items - If you are working with measure items that have time ranges, you can select one or more items at a time to edit. You can use Ctrl+Click and Shift+Click to select more than one item. When multiple measure items are selected, only properties in common are enabled. If you are working with measure items without time ranges, you can select one item at a time for editing.</p>
<p>2</p>	<p>Paging Controls - Use the paging arrows and links to move between pages of measure items. Controls are active only when there are multiple pages of measure items.</p>
<p>3</p>	<p>Measure List and Search Button  - Use the list to choose a different measure for selected measure item(s). Measures are grouped by categories. Or, click the search button and use the Select Measure window. If you have multiple measures selected for editing and the measure items are from different categories, this list will be disabled.</p>
<p>4</p>	<p>Time Properties - Use the time properties to edit time ranges for the measure item(s). The properties only display if the view you're working with has its main Time Range property set to Yes.</p> <ul style="list-style-type: none"> • Time Unit - Select the unit of time for the measure item(s). For example, weeks, months, or quarters. • From Year / Period / Offset - Use to determine the starting point for the measure item's time range. You can use all absolute, all based, or a combination of absolute and based time properties to define the point in time. Optionally use the Offset property in combination with the year and period to further customize the time range. The property defaults to 0. You can enter a positive offset or negative offset value such as 1 or -1 to define how many period(s) to move forward or backward from the designated year / period. • To Year / Period / Offset - Use to determine the ending point for the measure item's time

range. The To properties behave in the same manner as the From properties described above.

5

OK / Update / Exit - OK applies the edits and closes the window. Update applies the edit but leaves the window open so you can edit other measure items. Exit closes the window without making any edits.

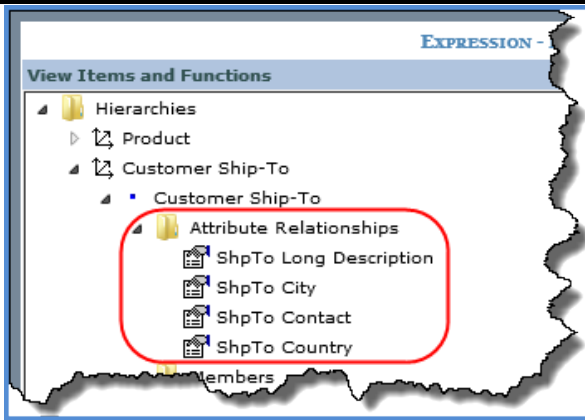

Expression Window for Views

1

Hierarchies – Hierarchies, levels, and attribute relationships that are part of the view definition will appear in the View Items and Function portion of the Expression window. They appear in the same order as in the view explorer and regardless of whether or not they are visible or actively showing in the grid.

Levels can be expanded to see the Attribute Relationships and Members folders. If attribute relationships were selected for the level, they will display when the Attribute Relationships folder is expanded.

- **Levels and Attribute Relationships** - Click a level or attribute relationship to add it to the expression. Objects can also be drag and dropped into the Expression portion of the window.
- **Members** - Another tool for building the expression is the Members folder. Click it to access the Select Filter Method window. From there, you can access the Select or Advanced Select Members window. This allows you to select specific members for the expression. Or, you can access the Named Set window and select a named set for the expression in cases when you are working with a single level time dimension.

When you add objects in this manner to the Expression, they are added in MDX format. That format includes a reference to the object dimension and hierarchy. The standard MDX format for objects commonly used in expressions follows.

- **Level** - [Dimension name].[Hierarchy name].[Level name].members
- **Attribute Relationship** - [Dimension name].[Hierarchy name].Properties("Attribute Relationship name")
- **Member** - [Dimension name].[Hierarchy name].[Level name].[Member value]

You can also add objects to the expression by typing directly in the Expression portion of the window. For example expressions and MDX, see [Creating Expressions for Calculated Measure Items](#).

2

Measure Items – The Measure Items section lists all the measure items associated with the view. Each measure item displays as Name (Caption). The name is the unique identifier associated with the measure item, which can be seen in the Properties window for the measure item. The caption makes it user friendly. They appear in the same order as in the view explorer.

You can include measure items as part of the expression using any of the following methods:

- Select measure items by clicking or drag and drop.
- Key in measure item names directly in the Expression portion of the window in proper MDX format:

[Measures].[Name(Caption)] or [Measures].[Name]

where Name is the unique identifier that you can see for the measure item displayed in the measure item folder of the expression window.

You can also key in any measure that is part of the cube associated with the view. The format to use for measures is [Measures].[Name] where Name is the full name for the measure (for example, Actual Sales Sales Units or Budget Budget Amount Frozen). For example expressions and MDX, see [Creating Expressions for Calculated Measure Items](#).

3

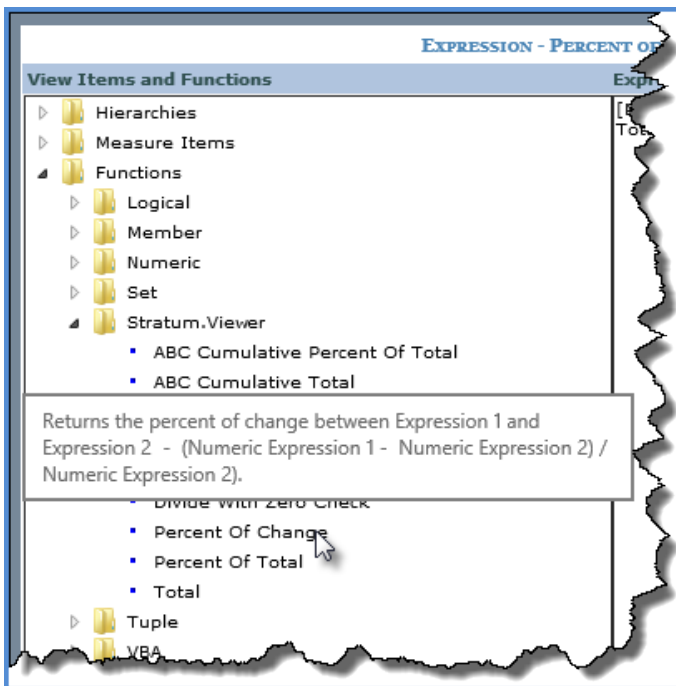

Functions – A Functions folder provides you with logical, member, numeric, set, Stratum.Viewer-specific, tuple, and VBA functions that can be used for building the calculated or distinct calculated measure item expression. You can select a function by clicking, double clicking, or drag and drop. You can also key in a function directly in the Expression portion of the window.

If you select a function for your expression, then the formula for it will display in the Expression section and each parameter will be enclosed in double arrows (<< >>). Function parameters enclosed in double arrows, such as «PARAMETER», are required. Parameters enclosed in brackets and double arrows, such as [«PARAMETER»], are optional. You can highlight each parameter and type over it directly in the Expression section. Or you can click the needed element from the tree structure in the window and it will be inserted into that section of the function.

The Stratum.Viewer folder includes custom functions, such as cumulative and percent of total functions. If you use them in an expression, they will be preceded by a pound sign (#) to distinguish them from standard MDX functions. The Stratum.Viewer specific functions are:

- ABC Cumulative Percent of Total
- ABC Cumulative Total
- Achievement Percent
- Cumulative Percent of Total
- Cumulative Total
- Divide With Zero Check
- Percent of Change
- Percent of Total
- Total

There are pop-up labels for all functions, and they give you a brief description of the functions.

4

Expression – MDX expression associated with the measure item.

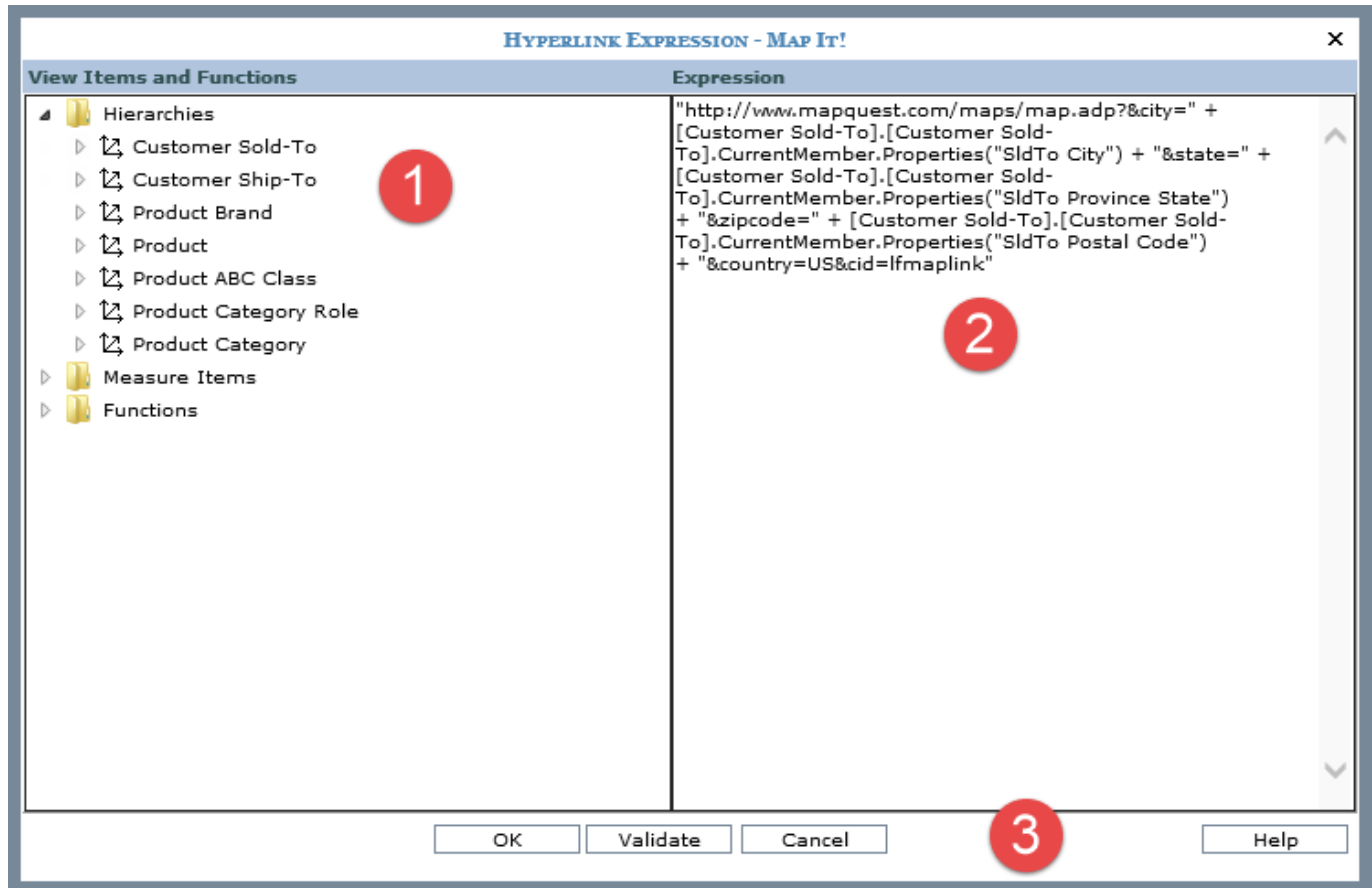

Note: Objects not visible in a view or not part of a view definition can be used in an expression by manually entering them into the Expression portion of the window. You must refer to them by their valid MDX format and they must exist in the cube associated with the view.

5

Validate – Click the Validate button at any point while you are building the expression. Stratum.Viewer will verify whether or not the format of your expression is valid. If you do not click the Validate button while building the expression, then validation will be performed once you click the OK

button.

Hyperlink Expression Window

1

View Items – The hierarchies, attribute relationships, and measure items associated with the view can be included in the hyperlink expression. Use the view items and functions to define your hyperlink expression by clicking on or dragging and dropping the item into the Expression area. You can also key static text directly into the Expression portion of the window.

Functions - A Functions folder provides you with numeric, member, date, tuple, and Stratum.Viewer-specific functions that can be used for building the hyperlink expression.

2

Expression – The evaluated expression will be an active hyperlink when the measure item is clicked on. The hyperlink can direct users to other applications, websites or views.

Examples follow and are also shown in [Use Hyperlinks in a View](#):

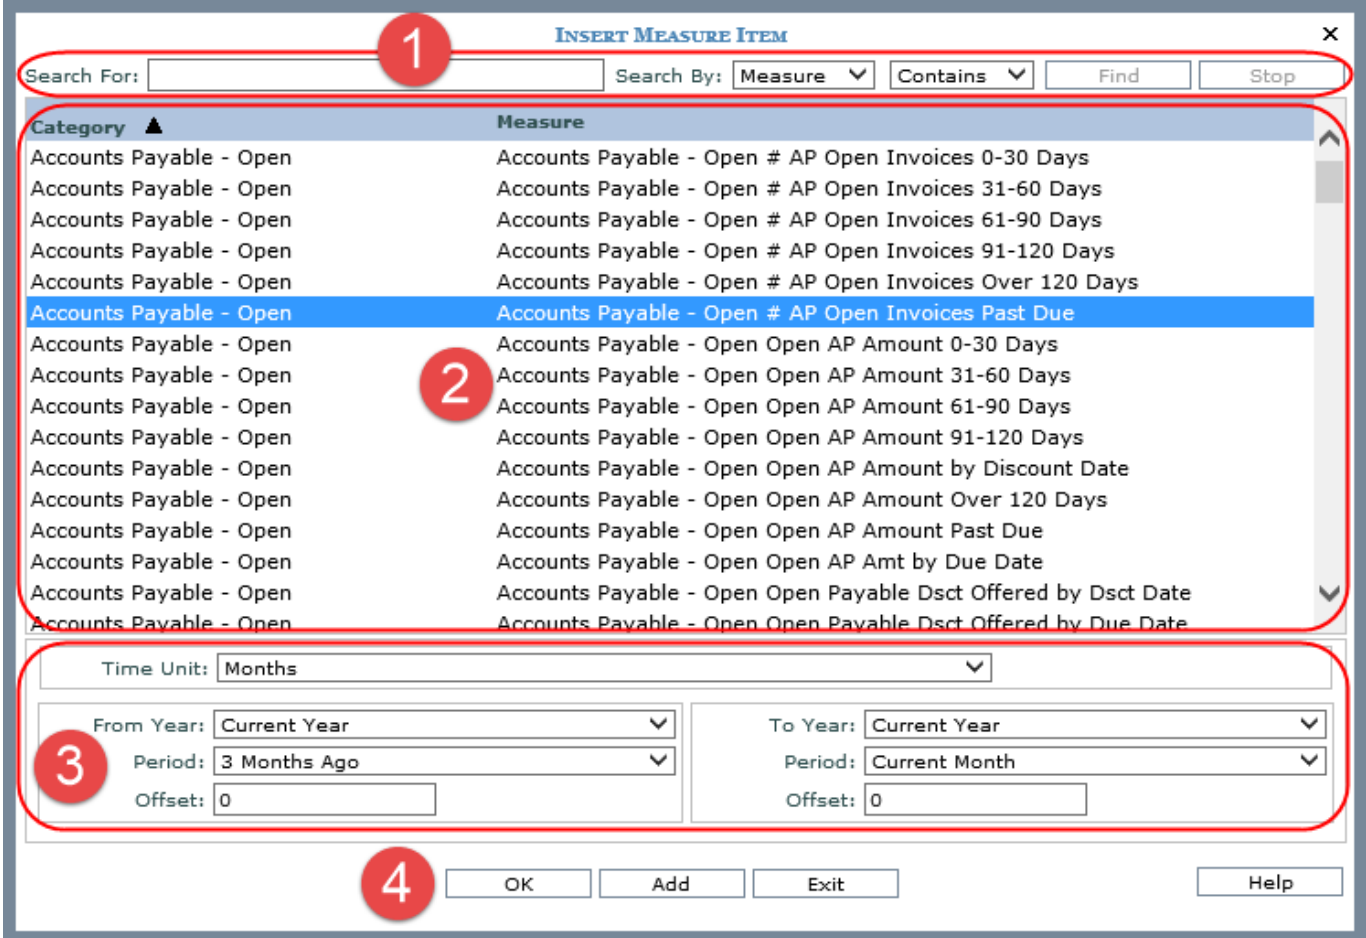

Access a website from a hyperlink. For example: "http://www.mapquest.com" would take the user to the Mapquest home page.

Access a website using attribute relationships as parameters. For example:

1. "http://www.mapquest.com/maps/map.adp?&city=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo City") + "&state=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Province State") + "&zipcode=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Postal Code") + "&country=US&cid=lfmaplink"
2. Iif([Customer SoldTo].[Customer SoldTo].Properties("SldTo Long Description")=null, null, "http://www.google.com/search?hl=en&q=" + [Customer SoldTo].Properties("SldTo Long

	<p>Description"))</p> <p>Access another Stratum.Viewer view from a hyperlink. For example: http://silvonxyz:55003/ViewWindow.aspx?ViewId=139</p> <p>Access another StratumViewer view from a hyperlink that passes current member information as a parameter to the view when it runs. For example: <a +[salesperson].[salesperson].currentmember.name+""="" href="http://silvonxyz:55003/ViewWindow.aspx?ViewId=139&vp:Rep=">"http://silvonxyz:55003/ViewWindow.aspx?ViewId=139&vp:Rep="+[Salesperson].[Salesperson].CurrentMember.name+" "</p>
3	<p>OK – Click to validate your hyperlink expression and close the window.</p> <p>Validate – Click at any point while you are building the expression. Stratum.Viewer will verify whether or not the format of your expression is valid. Blank is not a valid expression.</p> <p>Cancel – Click to close the window without making any changes.</p> <p>Help – Click to open help about this window.</p>

Insert Measure Item Window

1	<p>Search section - Use the Search For field and values in the Search By drop-down list to narrow down the measures displayed in the window. Search using one or more criteria separated by semicolons (;) and by the category or measure. Additional search specifications can be associated with the search, for example, Contains, Greater Than, or Not Equal To.</p>
2	<p>Measure section - Select one or more measures to serve as the basis for the measure items that you are inserting. You can use Ctrl+Click and Shift+Click to select more than one measure. Measures are</p>

	listed by their category, and the section can be sorted. If a search has been executed, the section is refreshed to display search results. The remainder of the window will be populated with information based on the measures you select.
3	<p>Time Properties - Use the time properties to define time ranges for the measure item(s) that you are setting up. The properties only display if the view you're working with has its main Time Range property set to Yes.</p> <ul style="list-style-type: none"> • Time Unit - Select the unit of time for the measure item(s). For example, weeks, months, or quarters. • From Year / Period / Offset - Use to determine the starting point for the measure item's time range. You can use all absolute, all based, or a combination of absolute and based time properties to define the point in time. Optionally use the Offset property in combination with the year and period to further customize the time range. The property defaults to 0. You can enter a positive offset or negative offset value such as 1 or -1 to define how many period(s) to move forward or backward from the designated year / period. • To Year / Period / Offset - Use to determine the ending point for the measure item's time range. The To properties behave in the same manner as the From properties described above.
4	<p>OK / Add / Exit - OK inserts the measure item(s) and closes the window. Add inserts the item(s) and leaves the window open so you can insert more measure items. Exit closes the window without inserting any items.</p>

Pop-up Label Expression Window

POP-UP LABEL EXPRESSION - PERCENT OF TOTAL GROWTH [X]

View Items and Functions | **Expression**

Variables

- Conditional Format Name **1**
- Conditional Format Description
- Conditional Format Rule
- Measure Item Caption
- Measure Item Value

Hierarchies

Measure Items

Functions

Expression

"Percent of Total Growth is " + #MeasureItem("Value") + " .
Up arrow represents growth greater than .01%.
Horizontal arrow represents growth between .01 to 0%.
Down arrow represents a negative growth." **2**

3

OK Validate Cancel Help

1

View Items – Use the view items and functions to define your pop-up label expression by clicking on or dragging and dropping the item into the Expression area. The conditional format name, description, and rule can be included in the pop-up label, as well as the caption and value of the associated measure item. The hierarchies, attribute relationships, and measure items associated with the view can be included in the pop-up label. You can also key static text directly into the Expression portion of the window.

Note: If you use the Conditional Format variables in an expression and no conditional format exists for the measure item, then three blank spaces will display for the variables in the resulting pop-up label. The same is true for Conditional Format Rule variables in use in cases where a rule for the corresponding conditional format would produce a null value for the measure item.

Functions - A Functions folder provides you with numeric, member, date, tuple, and Stratum.Viewer-specific functions that can be used for building the pop-up label expression.

2

Expression – The evaluated expression will be displayed when the cursor is hovered over the measure item value, image, or indicator. Anytime the user hovers over that measure item within the view grid, the pop-up label will display.

- Click an item from the View Items and Functions side of the window to add it to the expression.
- Use double quotes to enclose any static text included in expressions.
- Use a plus sign + to concatenate parts of a multi-part expression.
- Blank expressions are not valid.
- An expression that results in an error will display #ERR in the executed pop-up label.

Examples follow. See [Define Pop-up Labels for Measure Items](#) for more examples.

A pop-up label can be used to display the measure item value when value is set to “No”. For example: #MeasureItem("Value") will display the measure item value when the user hovers over a conditional format icon.

A pop-up label can be used to display the measure item value and conditional format rules. For example:

"Percent of Total Growth is " + #MeasureItem("Value") + " .
Up arrow represents growth greater than .01%
Horizontal arrow represents growth between .01 to 0%.
Down arrow represents a negative growth."

The above example will display as shown below.

A pop-up label can be static text that tells the user additional information about a measure item. For example: “Percent of Total Growth displayed in this view has not been adjusted for returns.”

3

OK – Click to validate your pop-up label expression and close the window.

Validate – Click at any point while you are building the expression. Stratum.Viewer will verify whether or not the format of your expression is valid.

Cancel – Click to close the window without making any changes.

Help – Click to access help specific to the Pop-up Label Expression window.

Properties Windows for Individual Measure Items

Regular Measure Items

Property	Value
Name	Data1
Caption Expression	[Measure] [From Period Short Desc] [From Year ...]
Type	Regular
Measure	Actual Sales Sales Amount
Format String	As Is
Value	Yes
Image	No
Conditional Format	No Sales Above Goal
Pop-up Expression	Yes "Indicator displays for sales over \$5 mi
Hyperlink	No
Visible	Yes
Filter	Recursive Top Count 15
Sort	Descending
Total	Total

1	<p>Name – The text in this field determines the unique name that Stratum.Viewer will use to identify a measure item in the view. You can edit this field as needed. Default names given to new measure items are DataN. The “N” is a sequential number assigned by Stratum.Viewer to create a unique name. You will be prompted to make corrections to the name if you enter a duplicate name, use any spaces in the name, use too many characters (more than 50), or use invalid characters.</p> <p>Caption Expression - A read only field that shows the expression behind the caption for a measure item. The resolved text generated by the expression creates the caption, which is the text that displays for the measure item in the view and other areas of the application such as view explorer. The Caption Expression window can be accessed for editing the expression by clicking the Browse button next to the field.</p>
2	<p>Type – This property shows the type of measure item you are working with – either regular, calculated, or distinct calculated. The property will be set to “Regular” if you are inserting or editing a regular measure item.</p> <hr/> <p>Note: See the next table for information about calculated and distinct calculated types.</p> <p>Measure – This field is a read only field that displays the underlying measure you selected when setting up the regular measure item.</p> <ul style="list-style-type: none"> For measure items with time ranges, clicking the Browse Button  next to the Measure field opens the Edit Measure Item window. Use that window to edit the measure item's underlying measure or time range. The main Time Range property for a view must be set to Yes for the Properties window to behave in this manner. For measure items without time ranges, clicking the search button  next to the Measure field opens the Select Measure window for editing the underlying measure. The main Time Range property for a view must be set to No for the Properties window to behave in this manner.

	manner.
3	Format String – Use this drop-down list to apply a format such as decimal places, monetary symbols, commas, or a combination of formatting.
4	<p>Value – Determines if the measure item value displays in the Viewer grid. Set to Yes to display value. Set to No to hide the value, for example, in cases where you want to display only the conditional format icon for a measure item.</p> <p>Image – This property is used when setting up calculated measure items that display images. See the next table for information about this property.</p>
5	<p>Conditional Format – Controls the display of icons, and cell and text formatting for the measure item by applying the conditional format rules. The Browse button  is only enabled when the Conditional Format field is set to Yes. When enabled, you can click the button to access the Select Conditional Format window to edit the conditional format associated with the measure item or create a new one. The name of the selected conditional format displays in the text box left of the  icon.</p>
6	<p>Pop-up Expression – Use this property to specify whether the selected measure item has a pop-up label that will display when you hover over the measure item value, indicator, or image. The Browse button  is only enabled when the Pop-up Expression field is set to Yes. When enabled, you can click the button to access the Pop-up Label Expression window to edit the existing expression or create a new one. The active pop-up expression displays in the text box left of the  icon.</p> <p>Hyperlink – Choose Yes if you want a hyperlink defined for the cell of a measure item. The Browse button  is only enabled when the Hyperlink field is set to Yes. When enabled, you can click the button to access the Hyperlink Expression window to edit the expression or create a new one. The hyperlink defined displays in the text box left of the  icon.</p>
7	<p>Filter and Sort – Use to add, edit, or remove filters and sorts. For filters, select the operator from the drop-down list and enter the value to filter by in the field next to the list. Pop-up labels showing filter criteria will show for the Filter field after a filter has been applied.</p> <p>If your view has levels on the same axis as measure items, these properties will be disabled until you have applied an initial filter or sort via the grid.</p>
8	<p>Total – Use to control the type of total that is performed for a measure item. The default setting for all measure items is Total.</p> <ul style="list-style-type: none"> • None – No total will be displayed. • Total – This designation takes into account any underlying calculations for a measure item's definition when generating Grand Totals, sub-totals, and All Others – such as calculations defined in a measure item expression or associated with a Stratum.Planner calculated value. • Sum – This designation means that Viewer will generate totals by adding the values displayed in measure item detail cells. That summing will be used to generate the Grand Totals, sub-totals, and All Others. This type of total is intended for special cases where you don't want any of the underlying calculations that Viewer performs to be used when generating total values. You might choose to use a Sum total when a measure item calculation includes an IIF statement, such as a calculation with IF, Then, Else conditions. See also When to Use the "Sum" Total Setting for Measure Items.

Calculated and Distinct Calculated Measure Items

Properties - Percent of Total Growth	
1	Name: Data7
2	Caption Expression: Percent of Total Growth
3	Type: Calculated
4	Expression: [Measures].[Data5 (% of Total)] - [Measures]
5	Format String: #,###.000%
6	Value: No
7	Image: No
8	Conditional Format: Yes, Percent of Total Growth
	Pop-up Expression: Yes, #MeasureItem("Value")
	Hyperlink: No
	Visible: Yes
	Filter:
	Sort: None
	Total: Total

1	<p>Name – The text in this field determines the unique name that Stratum.Viewer will use to identify a measure item in the view. You can edit this field as needed. Default names given to new measure items are DataN. The “N” is a sequential number assigned by Stratum.Viewer to create a unique name. You will be prompted to make corrections to the name if you enter a duplicate name, use any spaces in the name, use too many characters (more than 50), or use invalid characters.</p> <p>Caption Expression – A read only field that shows the expression behind the caption for a measure item. The resolved text generated by the expression creates the caption, which is the text that displays for the measure item in the view and other areas of the application such as view explorer. The Caption Expression window can be accessed for editing the expression by clicking the Browse button next to the field.</p>
2	<p>Type – This property shows the type of measure item you are working with – either regular, calculated, or distinct calculated. The property will be set to “Calculated” or “Distinct Calculated” if you are inserting or editing that type of measure item.</p> <hr/> <p>Note: See the previous table for information about regular types.</p> <p>Expression – When "Calculated" or "Distinct Calculated" is the measure item type, an Expression field shows in this window. It's a read only field that shows the expression for calculating the measure item. The Expression window can be accessed for editing the expression by clicking the Browse button  next to the field.</p> <p>Note that when you are using a calculated measure item to display images in a view that the expression will determine the location/name of the image file for Stratum.Viewer to display.</p> <ul style="list-style-type: none"> • The image file must reside in the Stratum.Viewer application folders. It is recommended that all custom images reside in a subfolder of the Images folder of the Stratum.Viewer application. • Supported file types for images are *.jpg, *.jpeg, *.png, *.bmp, *.gif, *.tif, and *.tiff. • The image will display according to its original, default size.

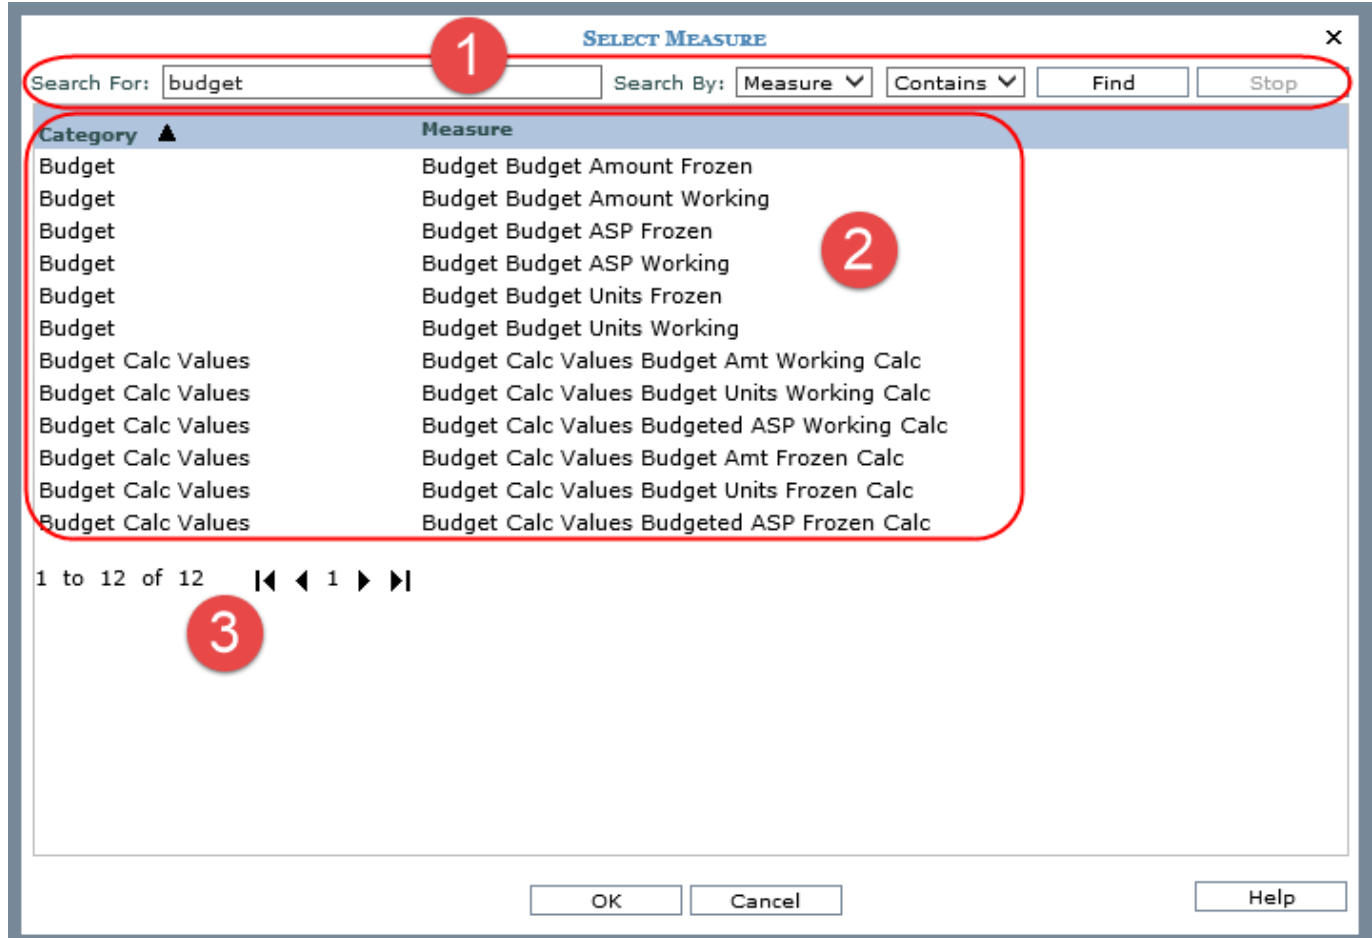

3	<p>Format String – Use this drop-down list to apply a format such as decimal places, monetary symbols, commas, or a combination of formatting.</p>
4	<p>Value – Determines if the measure item value displays in the Viewer grid. Set to Yes to display value. Set to No to hide the value, for example, in cases where you want to display only the conditional format icon for a measure item.</p> <p>Image – This property is used when setting up calculated measure items that display images. You use the Expression window to define the location of the image and then set this property to Yes in order for the defined image to display in the grid. See item 2 above.</p>
5	<p>Conditional Format – Controls the display of icons, and cell and text formatting for the measure item by applying the conditional format rules. The Browse button  is only enabled when the Conditional Format field is set to Yes. When enabled, you can click the button to access the Select Conditional Format window to edit the conditional format associated with the measure item or create a new one. The name of the selected conditional format displays in the text box left of the  icon.</p>
6	<p>Pop-up Expression – Use this property to specify whether the selected measure item has a pop-up label that will display when you hover over the measure item value, indicator, or image. The Browse button  is only enabled when the Pop-up Expression field is set to Yes. When enabled, you can click the button to access the Pop-up Label Expression window to edit the existing expression or create a new one. The active pop-up expression displays in the text box left of the  icon.</p> <p>Hyperlink – Choose Yes if you want a hyperlink defined for the cell of a measure item. The Browse button  is only enabled when the Hyperlink field is set to Yes. When enabled, you can click the button to access the Hyperlink Expression window to edit the expression or create a new one. The hyperlink defined displays in the text box left of the  icon.</p>
7	<p>Filter and Sort – Use to add, edit, or remove filters and sorts. For filters, select the operator from the drop-down list and enter the value to filter by in the field next to the list. Pop-up labels showing filter criteria will show for the Filter field after a filter has been applied.</p> <p>If your view has levels on the same axis as measure items, these properties will be disabled until you have applied an initial filter or sort via the grid.</p>
8	<p>Total – Use to control the type of total that is performed for a measure item. The default setting for all measure items is Total.</p> <ul style="list-style-type: none"> • None – No total will be displayed. • Total – This designation takes into account any underlying calculations for a measure item’s definition when generating Grand Totals, sub-totals, and All Others – such as calculations defined in a measure item expression or associated with a Stratum.Planner calculated value. • Sum – This designation means that Viewer will generate totals by adding the values displayed in measure item detail cells. That summing will be used to generate the Grand Totals, sub-totals, and All Others. This type of total is intended for special cases where you don’t want any of the underlying calculations that Viewer performs to be used when generating total values. You might choose to use a Sum total when a measure item calculation includes an IIF statement, such as a calculation with IF, Then, Else conditions. See also When to Use the “Sum” Total Setting for Measure Items.

Properties Window for Measure Items Axis

Properties - Measure Items		✕
Time Range	Yes	▼
Axis	Columns	▼
Drilldown View	None	▼

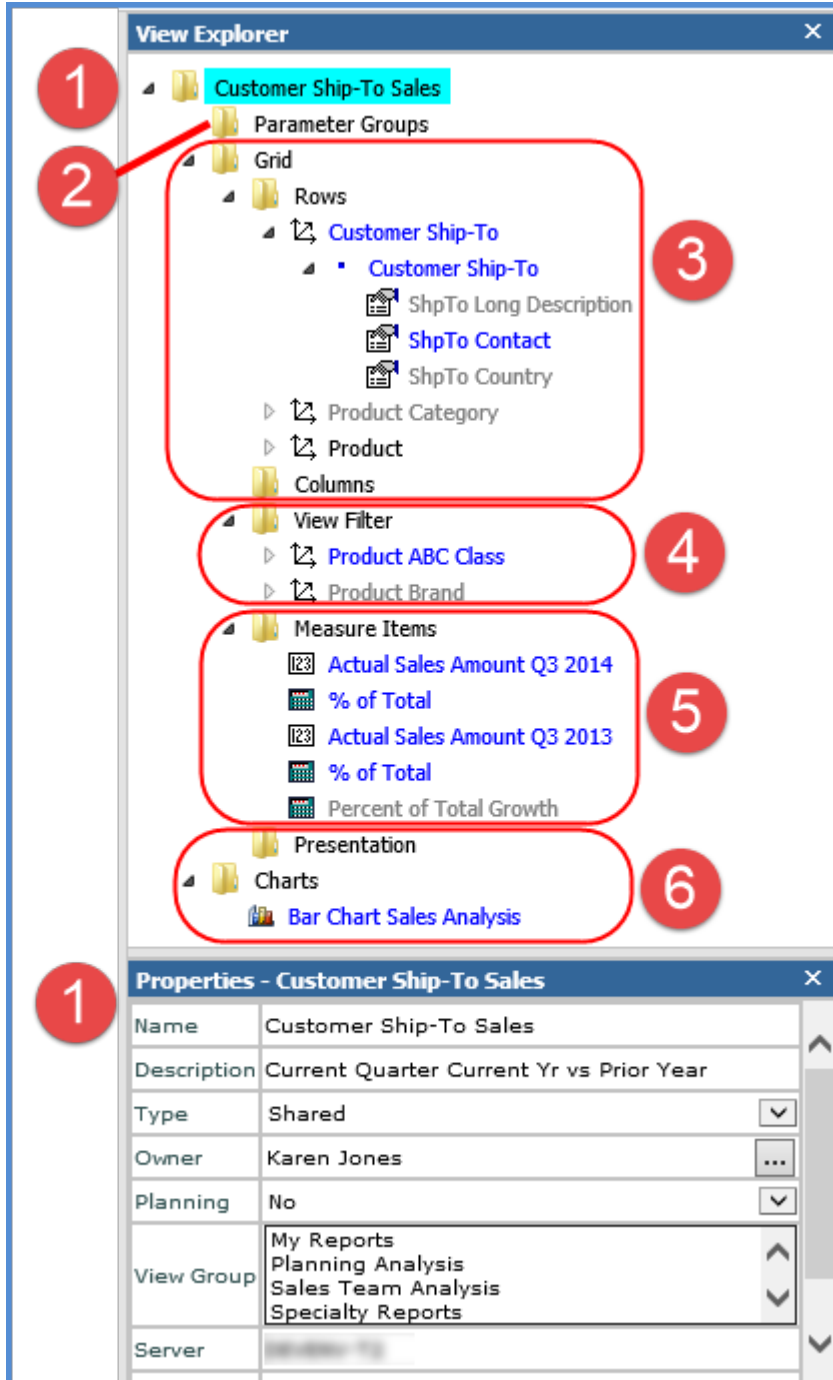

<p>1</p>	<p>Time Range – This controls the type of measure items that you can set up for the view – either measure items with time ranges (Yes) or measure items without time ranges (No). Leave the property set to Yes if you want to work with measure items that have time ranges. Time hierarchies will not be available. Change the property to No if you want to work with measure items without time ranges and want to be able insert time hierarchies into the view.</p> <p>Changing this property for existing views will impact existing measure items and time hierarchies.</p> <ul style="list-style-type: none">• Change from Yes to No = existing measure items will be removed. Then you can work with time hierarchies and measure items without time ranges.• Change from No to Yes = existing measure items and time hierarchies will be removed. Then you can work with measure items that have time ranges.
<p>2</p>	<p>Drilldown View - Assign a drilldown view if you want to drill from measure items to another view, for example, to a view with related or complimentary data to the originating view. Choose from views that you normally have access to in the application.</p>

Select Measure Window

<p>1</p>	<p>Search section - Use the Search For field and values in the Search By drop-down list to narrow down the measures displayed in the window. Search using one or more criteria separated by semicolons (;) and by the category or measure. Additional search specifications can be associated with the search, for example, Contains, Greater Than, or Not Equal To.</p>
<p>2</p>	<p>Measure section - Select a measure for the measure item. Measures are listed by their category and the section can be sorted. If a search has been executed, the section is refreshed to display search results.</p>
<p>3</p>	<p>Paging Controls - Use the paging arrows and links to move between pages of measure. Controls are active only when there are multiple pages of measures.</p>

View Explorer

The elements in view explorer are organized into a tree structure that has expandable/collapsible folders. Folders are described in the following table. Color-coding is used throughout to help you distinguish which items will be visible in the grid and which are hidden.

- **Items in blue text** – Any items currently shown in the grid. Their Visible property is “Yes” in their Properties window.
- **Items in black text** – Any items that are not actively shown in the grid, but that have a Visible property of “Yes.” This means they will display in the grid once you reach them in the drill down path for the view.

- **Items in grey text** – Any items that have a Visible property of “No.” For levels, this means they will not display in the grid as you drill through it. Attribute relationships, measure items, and charts displayed in grey text also will not display in the grid. You can right-click on them anytime and select Show to make change their Visible property.

When you click an item, it is highlighted in a bright blue box like the view name, “Customer Ship-To Sales,” in the above example. When double-clicked, the Properties window of the active item opens at the bottom of the view explorer as shown in the above example. You can also right-click to invoke a pop-up menu of actions to take on items from view explorer.

1	<p>View name folder – displays the name of the view. Double-click to access the Properties window for editing basic properties like the Name, Type, Planning, and View Group properties. Administrators can use the Owner property to change the owner of a view.</p>
2	<p>Parameter Groups folder – for parameter groups and parameters within each group. As you insert groups and parameters, they will display under this folder. Each group and parameter has a related Properties window. You can drag and drop groups and parameters within each group to rearrange them.</p>
3	<p>Grid folder – The folders for Rows, Columns, View Filters, and Measure Items are organized under the Grid folder. From the Grid folder, you can access a Grid Properties window which determines if the grid is visible and if paging is enabled for the grid display.</p> <p>Rows and Columns folders – All of the included levels and attribute relationships, grouped by hierarchy, display appropriately in the Rows and Columns folder. You can move hierarchies along with their levels and attribute relationships between the Rows, Columns, or View Filter by dragging and dropping them within view explorer or into the grid from view explorer. Properties windows exist for hierarchies, levels, and attribute relationships in these folders. Use them to hide or show items, set up filters or sorting, control totals, etc.</p> <ul style="list-style-type: none"> • Hierarchies  – This image displays next to the names of hierarchies. • Levels  – Blue boxes next to a level indicate the level it is based for all the levels in its hierarchy. For example, a level with one box next to it would be the first level for its hierarchy. A level with two boxes next to it would be the second level available in its hierarchy, and so forth. • Attribute Relationships  – This image displays next to the names of attribute relationships for levels.
4	<p>View Filter folder – Levels included in the view filter. Setting up a view filter requires a level to be in the View Filter section and then applying a filter to that level. Drag or drop the desired level(s) into the View Filter section of the grid or into the View Filter folder of view explorer.</p>
5	<p>Measure Items folder – All measure items defined for this view display in the folder. You can edit, insert, remove and hide measure items from this folder. The Time Range controls the type of measure items that you can set up for the view – either measure items with time ranges (Yes) or measure items without time ranges (No). You can also use the Properties windows for individual measure items to change their caption, images, conditional formatting, pop-up labels, hyperlinks, filtering, sorting, totals, etc.</p> <ul style="list-style-type: none"> • Regular Measure Item  – This image displays next to regular measure items. • Calculated Measure Item  – This image displays next to calculated measure items. • Distinct Calculated Measure Item  – This image displays next to distinct calculated measure items.
6	<p>Presentation folder – The properties for this folder are used to set the default presentation format for the view (either Viewer or Excel) and to determine whether or not users will be prompted to choose the presentation format before the view opens for them.</p>

Chart folder – The Chart folder displays the names of any charts  that you have created for a view. Charts displayed in blue are currently visible in the grid. Charts displayed in grey are hidden. Charts can be dragged and dropped in the folder to change the order in which they display in the grid.

Advanced Concepts

Availability of Time Range Properties

A couple factors influence the availability of time range properties in the Insert Measure Item window and Edit Measure Item window.

Properties for Time Unit, From/To Year, Period, and Offset only display when the Time Range property for the view is set to Yes. See [Why isn't there a Section for Time in the Insert/Edit Measure Item Window?](#)

In cases where Time Range = Yes and you select multiple measure items in the windows, all of the properties will display but some of them may be disabled. Only properties that the selected measure items have in common will be enabled.

Default Values for Captions

The content of captions assigned to new measure items in your views are controlled by application settings. You can customize captions after adding measure items to views or leave captions set to the application default.

The state of the expressions for default captions upon first use of Stratum.Viewer is shown below. There is a unique caption expression defined for each type of measure item -- regular measure items with time ranges, regular measure items (those without time ranges), and calculated measure items. Security administrators can make adjustments to these defaults to match the preferences of your company. To do so, they click the Browse button  next to the expression and make changes in the [Caption Expression window](#).

Measure Item Caption Expression	
Regular with Time Range:	<input type="text" value="[Measure] [From Period Short Desc] [From Year YYYY] to [To Period Short Desc] [To Year YYYY]"/> 
Regular:	<input type="text" value="[Measure]"/> 
Calculated:	<input type="text" value="[Name]"/> 

The next few pages have examples of how the above default caption expressions translate into captions in a view.

Regular with Time Range

Here are the measures and time ranges specified for two new, regular measure items with time.

Next are the measure items in the view. The captions consist of six elements:

- [Measure] - the name of the underlying measure.
- [From Period Short Desc] [From Year YYYY] - the short description of the From period and four-digit year of the From year.
- The text " to "
- [To Period Short Desc] [To Year YYYY] - the short description of the To period and four-digit year of the To year.

Calculated

Here is a calculated measure item being set up for the same view as the prior one. You can see the existing regular measure items in the [Expression window](#), designated by their names Data1 and Data2 followed by the respective captions. Measure item names are in the format of DataN by default. The caption for the calculated measure item will be the name Data3 because our default caption expression for that type of measure item is [Name] and 3 is the next number available to assign to a name. You can see this measure items caption in the title of the Expression window.

```

OK Validate Cancel Help

Here is the measure item in the view. You can see the default caption of Data3 in the view, view explorer, and the [Properties window](#). You could give the measure item a more specific name by clicking the Browse button  in the Properties window and making changes in the [Caption Expression window](#).

The screenshot displays three windows from a data visualization tool:

- View Name: Daily Sales Current Year by Category**: A table with columns for Year, Product Category, Daily Sales Amount, Daily Sales Units, and Data3. The Data3 column shows percentages.
- View Explorer**: A tree view showing the hierarchy of the view, with 'Data3' highlighted under Measure Items.
- Properties - Data3**: A window showing the properties of the 'Data3' measure item. The 'Caption Expression' property is set to '[Name]' and is circled in red.

Year	Product Category	Daily Sales Amount	Daily Sales Units	Data3
2014				
200		\$179,363,438	367,285	14.86%
201		\$699,506,755	1,319,282	53.39%
202		\$67,234,940	108,322	4.38%
203		\$59,555,686	106,560	4.31%
204		\$142,865,453	316,674	12.82%
207		\$40,893,302	62,800	2.54%
208		\$162,443,565	190,091	7.69%
Grand Total		\$1,351,863,138	2,471,013	100.00%

Define Pop-up Labels for Measure Items

You can define pop-up labels for individual measure items using the Pop-up Label Expression property. You can include static text, variables, or a combination. When you specify a pop-up label, it takes precedence over other properties that would normally impact what displays in pop-up label text. If a pop-up label is defined, then it will display as the pop-up label text. If no pop-up label is defined but a hyperlink exists on the measure item, then the hyperlink displays in the pop-up label. If no pop-up label or hyperlink is defined but there is a drilldown view defined for the Measure Items axis, then the pop-up label will be the text 'Drill To' followed by the name of the drilldown view.

The basic steps for defining a pop-up label and a few examples follow.

1. Right-click the measure item in the view or [view explorer](#) and select Properties.
2. In the [Properties window](#), select Yes for the Pop-up Label Expression property.
3. In the [Pop-up Label Expression window](#), set up an expression to define the pop-up label and then click OK.
 - Click an item from the View Items and Functions side of the window to add it to the expression,
 - Use double quotes to enclose static text.
 - Use a plus sign + to concatenate parts of a multi-part expression.

Example – Static Text & View Information

This expression uses static text in combination with information from the view. The pop-up label will vary as you click on each Map It! measure item value based on corresponding Customer Sold-To member information.

"Click here to go to MapQuest for " + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Long Description")

POP-UP LABEL EXPRESSION - MAP IT! ✕

View Items and Functions	Expression

150180	GoodFoods -- Western		Google	\$253,657,307	9
150120	Sumpter Dist'n -- Eastern Divi		Google	\$183,844,440	6

Example – Measure Item Value Variable

This expression uses only the Measure Item Value variable.

#MeasureItem("Value")

The screenshot shows a software interface for defining a label expression. The title bar reads "POP-UP LABEL EXPRESSION - GROSS MARGIN AMOUNT JAN 2014 TO SEP 2014". On the left, a tree view titled "View Items and Functions" shows a hierarchy: Variables, Hierarchies, Measure Items, and Functions. Under "Variables", "Measure Item Value" is selected and circled in red. On the right, the "Expression" field contains the text "#MeasureItem('Value')", which is also circled in red.

Product	Actual Sales Amount Jan 2014 to Sep 2014	Returns Amount Jan 2014 to Sep 2014	Ext Actual Cost Jan 2014 to Sep 2014	Gross Margin Amount Jan 2014 to Sep 2014
Pear Hlvs LS 12 oz BR* 0A	\$9,513	(\$965)	\$6,725	\$7,732
Peach Hlvs HS 12 oz BR* 0A	\$6,243	(\$570)	\$4,663	
Applesauce 12oz BR* 0A	\$34,138	(\$3,717)	\$26,406	
FrtCktail HS 12 oz BR* 0A	\$20,521	(\$1,788)	\$15,423	
Pear Slcs LS 12 oz BR* 0A	\$25,353	(\$5,206)	\$21,443	

Example – Static Text & Measure Item Variables

This expression uses static text in combination with the two Measure Item variables.

"The value of " + #MeasureItem("Caption") + " is " + #MeasureItem("Value")

The screenshot shows the same software interface as above. In the "View Items and Functions" pane, "Measure Item Caption" is selected and circled in red. The "Expression" field contains the text: "The value of " + #MeasureItem("Caption") + " is " + #MeasureItem("Value")", which is also circled in red.

Product	Actual Sales Amount Jan 2014 to Sep 2014	Returns Amount Jan 2014 to Sep 2014	Ext Actual Cost Jan 2014 to Sep 2014	Gross Margin Amount Jan 2014 to Sep 2014
Pear Hlvs LS 12 oz BR* 0A	\$9,513	(\$965)	\$6,725	The value of Gross Margin Amount Jan 2014 to Sep 2014 is \$7,732
Peach Hlvs HS 12 oz BR* 0A	\$6,243	(\$570)	\$4,663	
Applesauce 12oz BR* 0A	\$34,138	(\$3,717)	\$26,406	
FrtCktail HS 12 oz BR* 0A	\$20,521	(\$1,788)	\$15,423	
Pear Slcs LS 12 oz BR* 0A	\$25,353	(\$5,206)	\$21,443	
Peach Hlvs LS 12 oz BR* 0A	\$12,838	(\$1,256)	\$9,053	
Peach Slcs LS 16 oz BR* 0A	\$19,834	(\$1,424)	\$14,530	

Example – Static Text & Conditional Format Variables

This expression uses two of the Conditional Format variables separated by static text (a dash mark). The pop-up label is for a measure item that has a conditional format defined for it.

#ConditionalFormat("Name") + " - " + #ConditionalFormat("Description")

POP-UP LABEL EXPRESSION - ACTUAL SALES SALES AMOUNT Wk 38 2014 TO Wk 38 2014

Peach Slcs HS 12 oz BR* 0A	\$27,096	(\$2,678)	\$20,638	\$6,458
Sw Cherries Pittd 12oz BR* 0A	\$39,388	(\$3,823)	\$31,181	\$8,207

Margin is within acceptable range. No action is needed.

Example – Format Variable & Showing Values Behind a Calculation

This expression displays the value of a sales amount measure item followed by a division sign and the value of a sales units measure item. The VBA Format function is used to control the display format of the values in the pop-up label. The pop-up label is meant to show the values behind a calculated measure item's results.

```
Format([Measures].[Data1 (Actual Sales Sales Amount Wk 38 2014 to Wk 38 2014)], "$#,##0.00;($#,##0.00)") + " / " + Format([Measures].[Data2 (Actual Sales Sales Units Wk 38 2014 to Wk 38 2014)], "#,###,##0")
```

The screenshot shows a dialog box titled "POP-UP LABEL EXPRESSION - AVG SELLING PRICE". On the left, there is a tree view of "View Items and Functions" with "VBA" selected and "Format" circled in red. The "Expression" field on the right contains the following VBA code: `Format([Measures].[Data1 (Actual Sales Sales Amount Wk 38 2014 to Wk 38 2014)], "$#,##0.00;($#,##0.00)") + " / " + Format([Measures].[Data2 (Actual Sales Sales Units Wk 38 2014 to Wk 38 2014)], "#,###,##0")`. The entire expression field is also circled in red. At the bottom, there are buttons for "OK", "Validate", "Cancel", and "Help".

Product	Actual Sales Sales Amount Wk 38 2014 to Wk 38 2014	Actual Sales Sales Units Wk 38 2014 to Wk 38 2014	Avg Selling Price
Applesauce 12oz BR* 0A	\$2,679	62	\$43.34
FrtCktail HS 12 oz BR* 0A	\$867	20	\$43.70
Pear Slcs LS 12 oz BR* 0A	\$928	21	\$332.74 / 6
Peach Hlvs LS 12 oz BR* 0A	\$968	22	
Peach Slcs LS 16 oz BR* 0A	\$333	6	\$55.11
Peach Slcs HS 12 oz BR* 0A	\$2,151	49	\$43.51
Peach Slcs LS 12oz BR* 0A	\$675	16	\$43.49
Peach Slcs 12 oz BR* 0A	\$1,427	21	\$65.53

Display Images for Measure Items

Displaying images for measure items involves setting up an expression to define the image name/location and setting the Image property to Yes. You can specify a single image for the entire measure item, in which case each cell for measure item will display same image. Or, you can specify an expression that displays a unique image for each cell based on dynamic text in the expression, such as an image that corresponds to products listed in the view. Typically the Value property is set to No and Total property is set to None in these cases.

Here are the basic steps followed by two examples.

1. Right-click the Measure Items folder in [view explorer](#) and select Insert Calculated Measure Item.
2. In the [Properties window](#), select Calculated as the Type.
3. In the [Expression window](#), set up an expression to define the name and location of the image and then click OK in that window.
 - Image file(s) must reside in the Stratum.Viewer application folders. It is recommended that all custom images reside in a subfolder of the Images folder of the Stratum.Viewer application.
 - Supported file types *.jpg, *.jpeg, *.png, *.bmp, *.gif, *.tif, and *.tiff.
 - Images will display in the grid according to their original, default size.
4. Set the Value property to No.

Note: If you set Value to Yes then the entire expression will display in the cell next to the image.

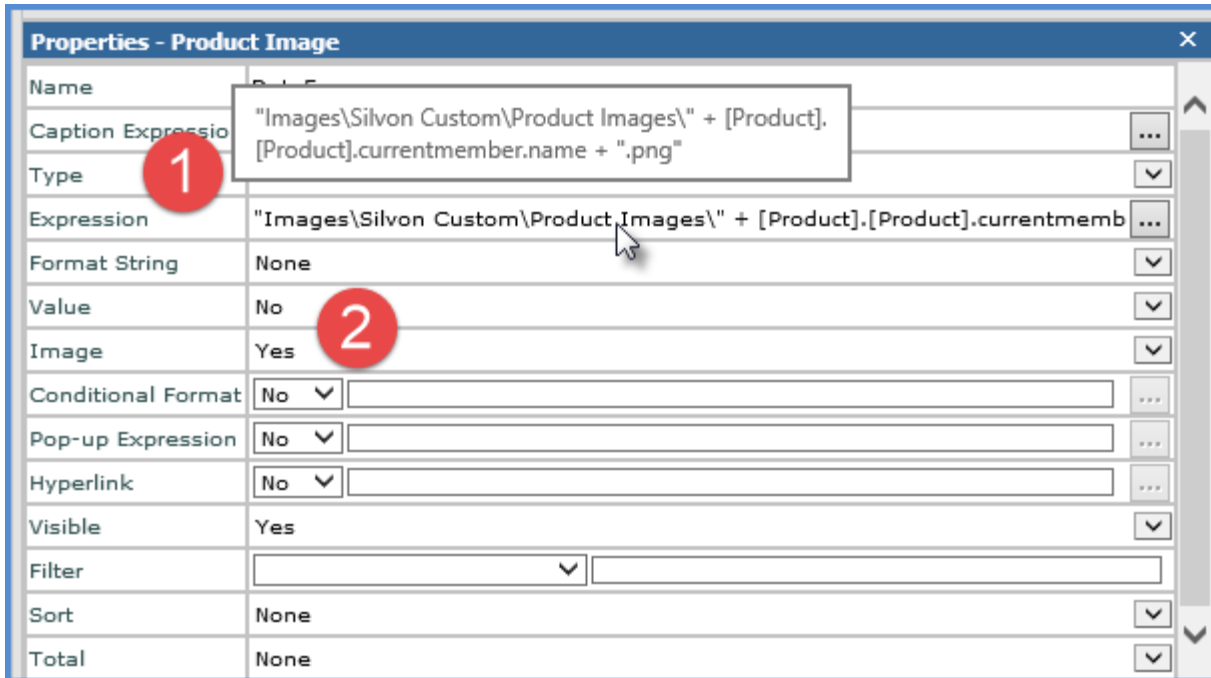

5. Set the Image property to Yes.
6. Set the Total property to None (images aren't needed for total / subtotal rows).
7. {Optional} Enhance the images by defining a hyperlink or pop-up label for the measure item.

Example 1

This view displays an image for each product. The calculated measure item “Product Image” defines the location and file name of the product images.

Product	Prod Long Description	Prod ABC Classification	Product Image	Actual Sales Sales Units Jan 2014 to Sep 2014	Actual Sales Sales Units Jan 2013 to Sep 2013
620A954020	Navel Oranges 0A	D		19,462	24,468
620B954000	Red Ripe Tomatoes 0B	B		15,195	19,665
620A954017	Cherries, Bing 0A	D		13,674	17,260
620A954014	Asparagus 0A	B		13,091	18,148
620A954011	Baby Carrots 0A	A		12,692	17,800
620A954016	Strawberries 0A	C		12,320	17,119
620A954008	Bananas 0A	A		4,588	6,906

The Product Image measure item is defined as follows:

1	<p>Expression – In this example, the product images reside in a subfolder of the Stratum.Viewer Images folder called “Silvon Custom/Product Images”. The first part of the expression determines the location of the product images and the remainder dynamically determines the file name.</p> <p>"Images\Silvon Custom\Product Images\" + [Product].[Product].currentmember.name + ".png"</p>
2	<p>Value – Set to No.</p> <p>Image – Set to Yes (required to display the image defined by the expression).</p> <p>Total – Set to None.</p>

Example 2

The example that follows shows a view containing images with hyperlinks that will take the user to MapQuest and Google using information from each Customer Sold-To attribute relationships. A pop-up label displays additional information for the user.

Customer Sold-To	SldTo Long Description	SldTo City	SldTo Province State	Map It!	Google It!	Actual Sales Sales Amount Wk 1 2014 to Wk 38 2014	% of Total
150100	Wilder Foods -- Eastern Americ	Cincinnati	OH			\$620,691,969	23.34%
150110	Wilder Foods -- Western Americ	Denver	CO		Google	\$554,184,062	20.83%
150150	Harrington's -- Eastern	New York	NY		Google	\$362,426,374	13.63%
150180	GoodFoods -- Western	Beverly Hills	CA		Google	\$253,657,307	9.54%
150120	Sumpter Dist'n -- Eastern Divi	Chicago	IL		Google	\$183,844,440	6.91%
150170	GoodFoods -- Eastern	Dallas	TX		Google	\$170,417,697	6.41%
150160	Harrington's -- Western	Detroit	MI		Google	\$154,194,175	5.80%
150130	Sumpter Dist'n -- Western Divi	Phoenix	AZ		Google	\$135,476,340	5.09%

The Map It! measure item was defined as follows:

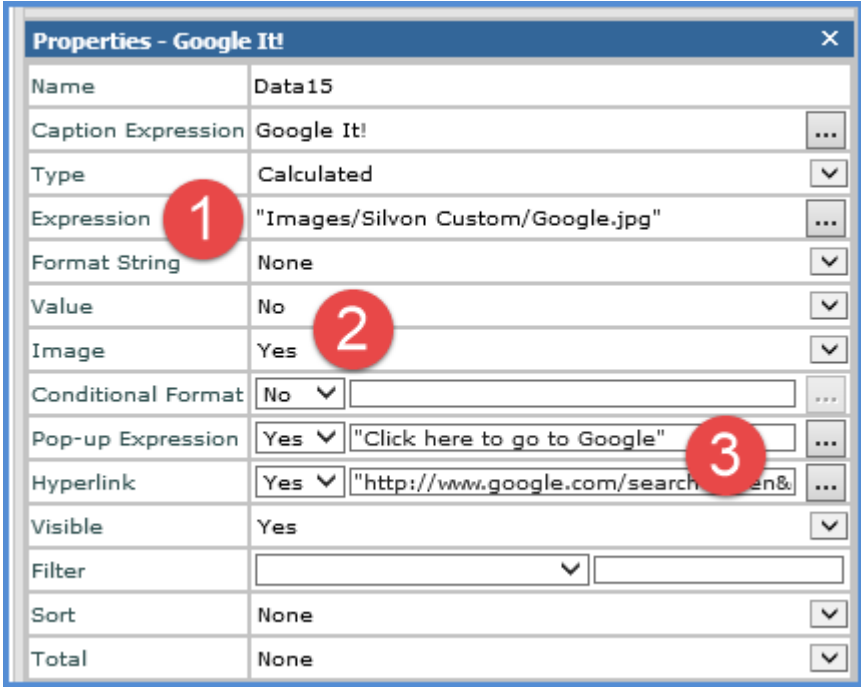

Properties - Map It! [X]

Name	Data14
Caption Expression	Map It! [...]
Type	Calculated [v]
Expression 1	"Images/Silvon Custom/Map.jpg" [...]
Format String	None [v]
Value 2	No [v]
Image	Yes [v]
Conditional Format	No [v] [...]
Pop-up Expression 3	Yes [v] "Click here to go to MapQuest" [...]
Hyperlink	Yes [v] "http://www.mapquest.com/maps" [...]
Visible	Yes [v]
Filter	[v] []
Sort	None [v]
Total	None [v]

1	Expression – In this example, the image resides in a subfolder of the Stratum.Viewer Images folder called “Silvon Custom”. The full expression defines the relative path to the image: "Images/Silvon Custom/Map.jpg"
2	Value – Set to No. Image – Set to Yes (required to display the image defined by the expression).

	Total – Set to None.
3	<p>Pop-up Label Expression – Here’s the expression for the pop-up label: “Click here to go to MapQuest”</p> <p>Hyperlink – Here’s the expression used for the Map It! hyperlink: "http://www.mapquest.com/maps/map.adp?&city=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo City") + "&state=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Province State") + "&zipcode=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Postal Code") + "&country=US&cid=lfmaplink"</p>

The Google It! measure item was defined as follows:

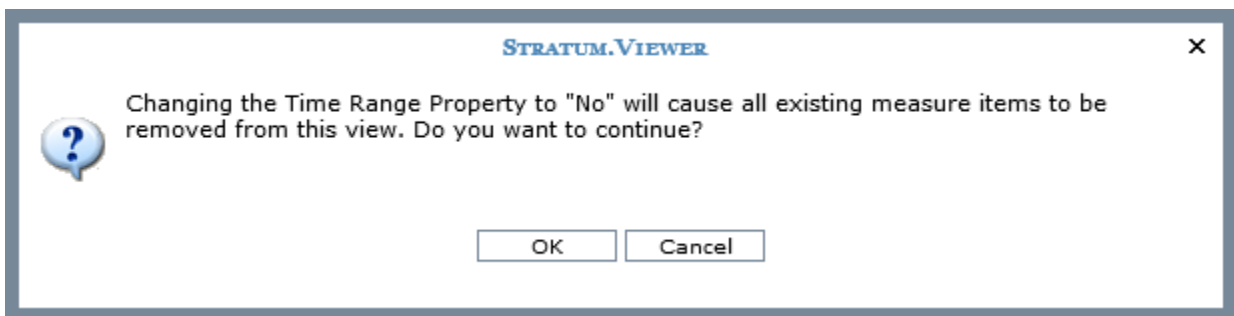

1	<p>Expression – In this example, the image resides in a subfolder of the Stratum.Viewer Images folder called “Silvon Custom”. The full expression defines the relative path to the image: "Images/Silvon Custom/google.jpg"</p>
2	<p>Value – Set to No.</p> <p>Image – Set to Yes (required to display the image defined by the expression).</p> <p>Total – Set to None.</p>
3	<p>Pop-up Label Expression – Here’s the expression for the pop-up label: “Click here to go to Google”</p> <p>Hyperlink – Here’s the expression used for the Google It! hyperlink: "http://www.google.com/search?hl=en&q=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Long Description")</p>

Edit the Axis for Measure Items

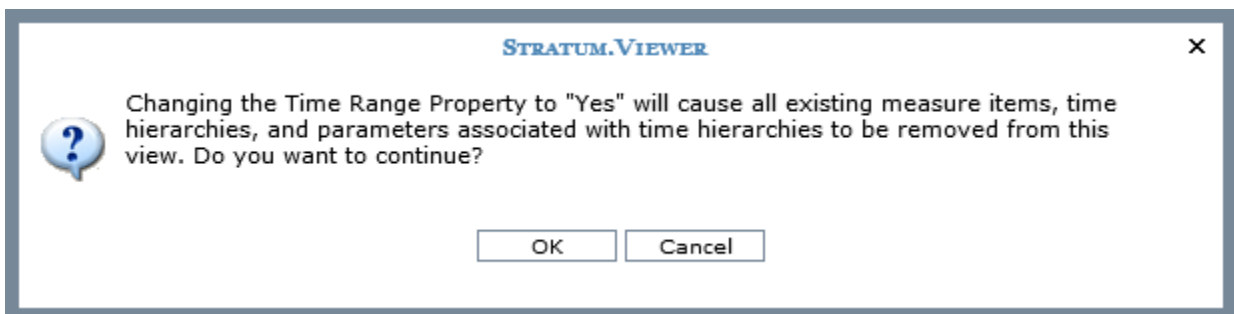

1. Double-click the Measure Items folder in [view explorer](#).
2. In the [Properties window](#), select the desired axis for all measure items -- either the row or column axis.

Edit the Time Range Property for a View

1. Double-click the Measure Items folder in view explorer.
2. In the [Properties window](#), change the Time Range property as desired:
 - Change to "No" if you want to disable time range capabilities with respect to measure items. If your view already has measure items in it, you will be prompted to confirm the change. If you click OK, all existing measure items will be removed from the view.

- Change to "Yes" if you want to enable time range capabilities with respect to measure items. If your view already has measure items and hierarchies in it, you will be prompted to confirm the change. If you click OK, all existing measure items, time hierarchies, and parameters based on time hierarchies will be removed from the view.

See also: [What Happened to a Measure Item that Used to be in my View?](#)

Make a Calculated Measure Item "Distinct"

1. Right-click a calculated measure item in the grid or [view explorer](#), and select Properties.
2. In the [Properties window](#), select Distinct Calculated as the type.
3. Click OK in the prompt that informs you the change will cause the measure item to be moved to the end of the view.
4. {Optional} If you want the measure item positioned at the beginning of the view, drag and drop it to that position in the Measure Items folder of view explorer.

Stratum.Planner Influence on Caption Variables

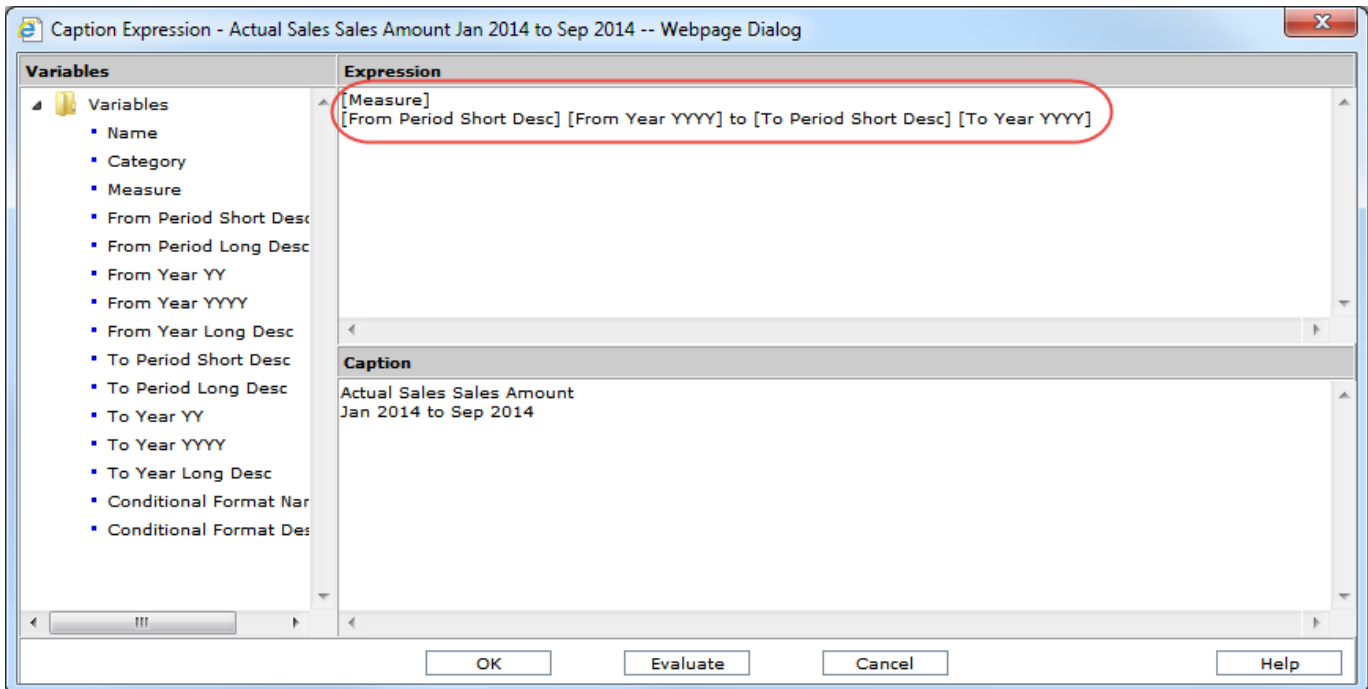

Stratum.Planner ViewSetItem properties are available to you as variables when setting up captions for regular measure items with [time ranges](#) in Stratum.Viewer. The From and To variables you see in the [Caption Expression window](#) correspond to the Short Description, Long Description, and Year properties of ViewSetItems. The property values for the selected variables in an expression will display in the evaluated caption in the grid.

Note: For a full list of From and To variables and what ViewSetItem values they resolve to in the executed caption, see [Caption Expression Window](#). See also [ViewGroups and ViewSets in the Stratum Storage Database](#).

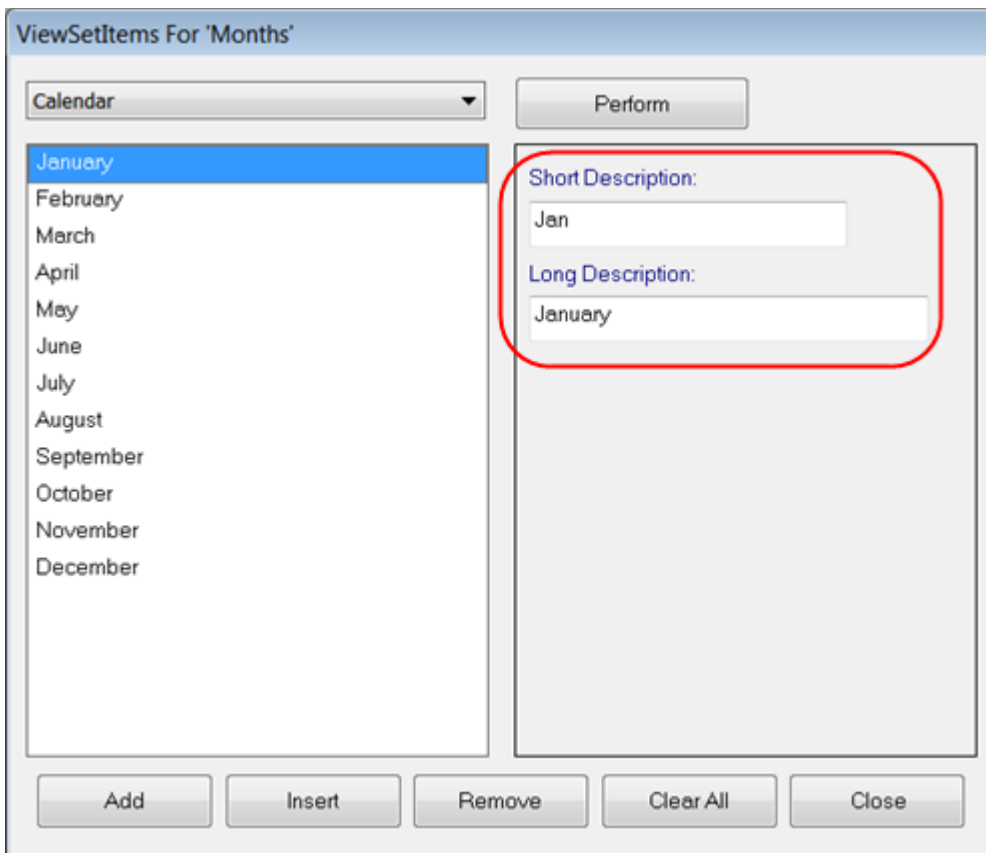

Here is a view with two measure items and their captions.

View Name: <i>Ship-To Region by RepBroker Type</i>				
View Filter				
	RepBroker Type >>	Broker		Grand Total
Ship-To Region	SRgn Regional Sales Manager	Actual Sales Sales Amount Jan 2014 to Sep 2014	Actual Sales Sales Return Amount Jan 2014 to Sep 2014	Actual Sales Amount Jan 2014 to Sep 2014
USA	Beverly Wirtz	\$42,494,992	(\$913,078)	\$42,4
USA	Edward Hanson	\$86,933,867	(\$2,752,794)	\$86,9
USA	Dan Bixman	\$149,464,779	(\$3,816,944)	\$149,4
USA	Catherine Dowling	\$69,647,280	(\$2,458,196)	\$69,6
CAN	Pierre Lejeune	\$91,471,256	(\$2,790,511)	\$91,4
CAN	Gerald Delaney	\$75,880,774	(\$2,415,986)	\$75,8
Grand Total		\$515,892,946	(\$15,147,509)	\$515,8

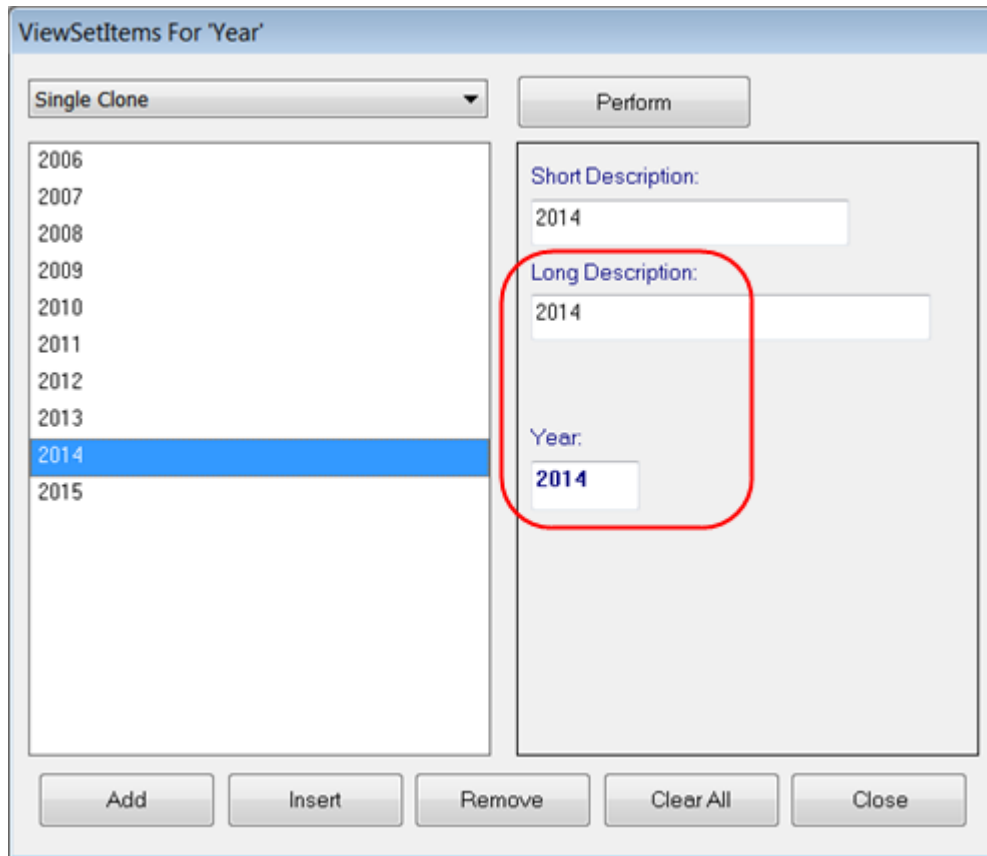

The same expression syntax was used for both measure items. Four of the From and To variables were used to build the caption expression – From Period Short Desc, To Period Short Desc, From Year YYYY, and To Year YYYY.

The short description from the corresponding ViewSetItem is used for the From and To Period Short Desc variables. If our example caption had used the From and To Period Long Desc variables, then the long description from the corresponding ViewSetItem would have been used.

The four digit Year from the corresponding ViewSetItem is used for the From and To Year YYYY variables in our example. If our example caption had used the From and To Year YY variables, then only the last two digits of the Year from the corresponding ViewSetItem would have been used. And if our example caption had used the From Year or To Year Long Desc variables, then the Year Long Description from the corresponding ViewSetItem would have been used in the evaluated expression in the grid.

Stratum.Planner Influence on Time Range Properties for Measure Items

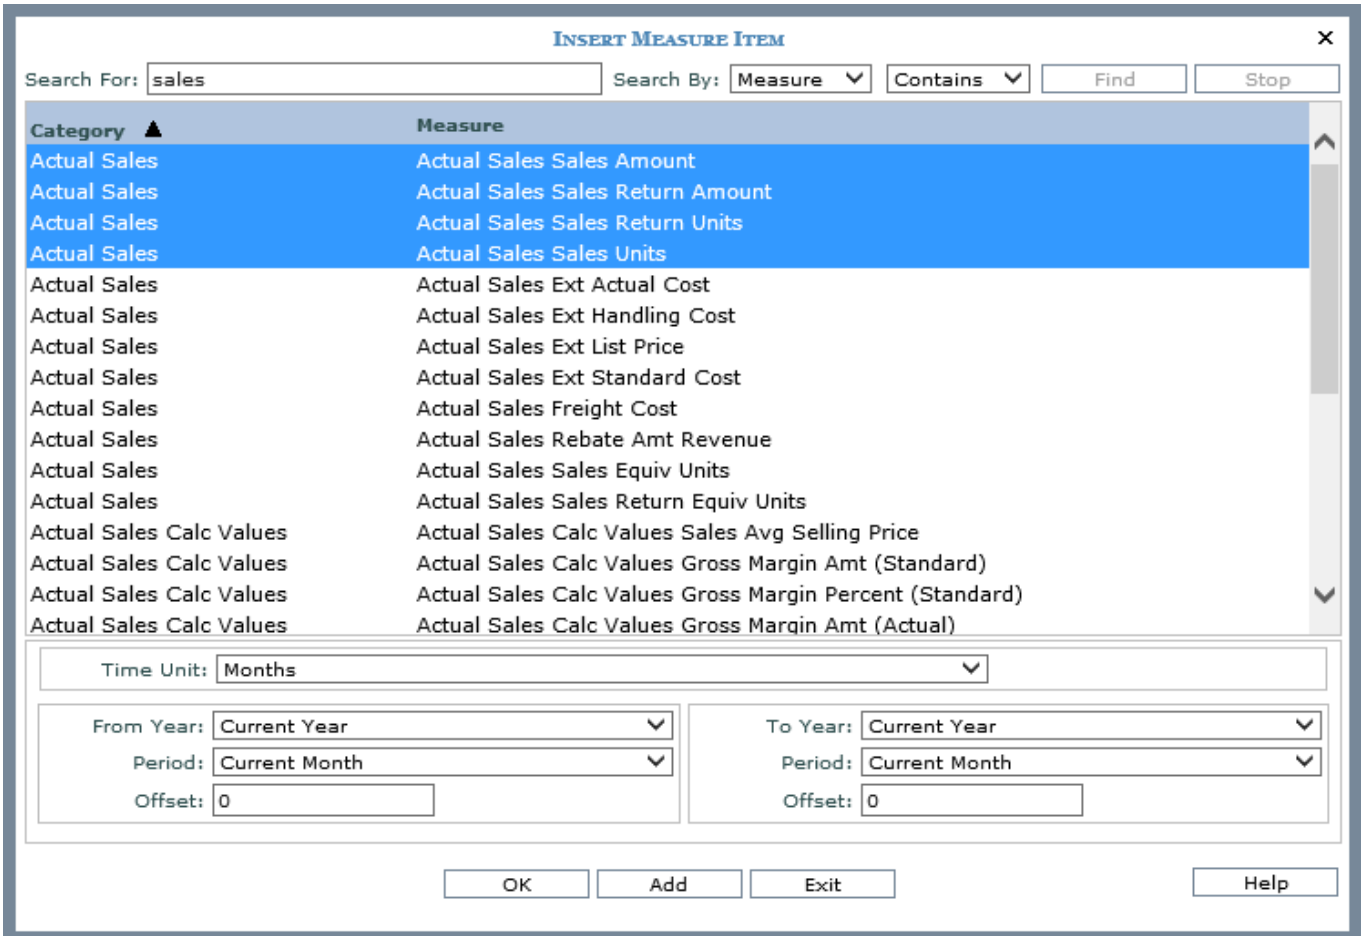

Stratum.Planner ViewGroups, ViewSets, and ViewSetItems impact the options available to you when setting up [time range](#) properties for [regular measure items](#). Time range properties are available in the Insert and Edit Measure Item windows when the Time Range property in a view is [set to Yes](#). See [Time Dimension Creation for Stratum.Viewer](#) for more detailed information about the Stratum.Planner influence on time in Stratum.Connector for Viewer and Stratum.Viewer.

Note: See also [ViewGroups and ViewSets in the Stratum Storage Database](#) and [Using Time Ranges vs. Time Hierarchies in Views](#).

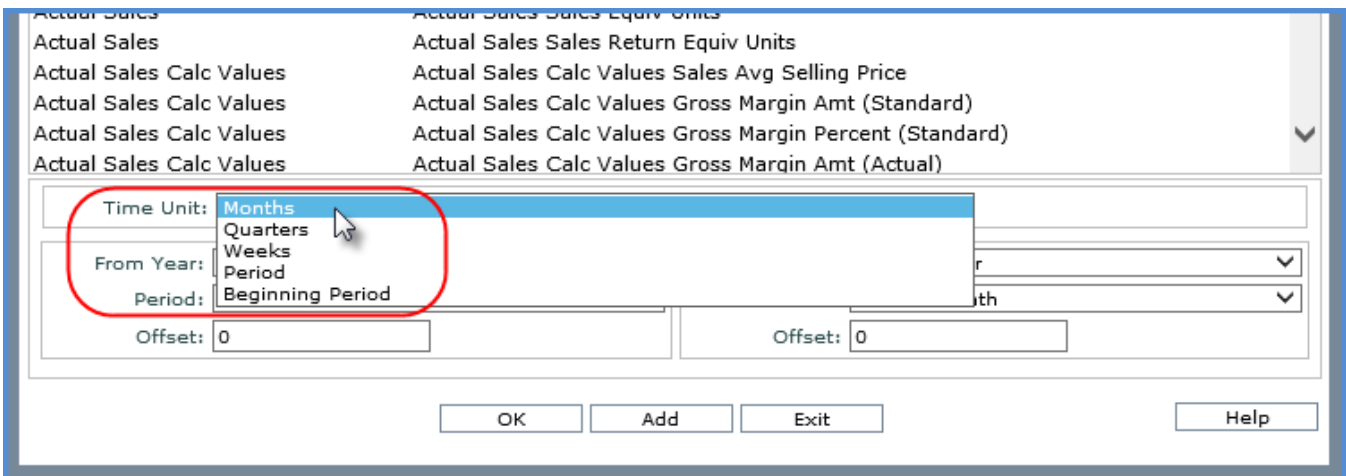

Here is a summary of how your time setup in Stratum.Planner impacts Stratum.Viewer time range properties. An example follows.

- The ViewGroup defined for a Structure Code determines the time units (quarters, months, etc.) available for each measure in the Stratum.Viewer [Insert](#) and [Edit Measure Item window](#). Each absolute periodic ViewSet becomes a time unit.
- The ViewSet priority determines the order in which they display in the Time Unit drop-down list.
- The ViewSetItems from the absolute and based year ViewSets associated with the selected measure are used to create the available To / From years for the time units.
- The ViewSetItems from the absolute and based periodic ViewSets associated with the measure are used to create the available To / From periods for each time unit.
- The based ViewSetItems marked as “Default” in Stratum.Planner will be used as the default year / period for the corresponding time unit.

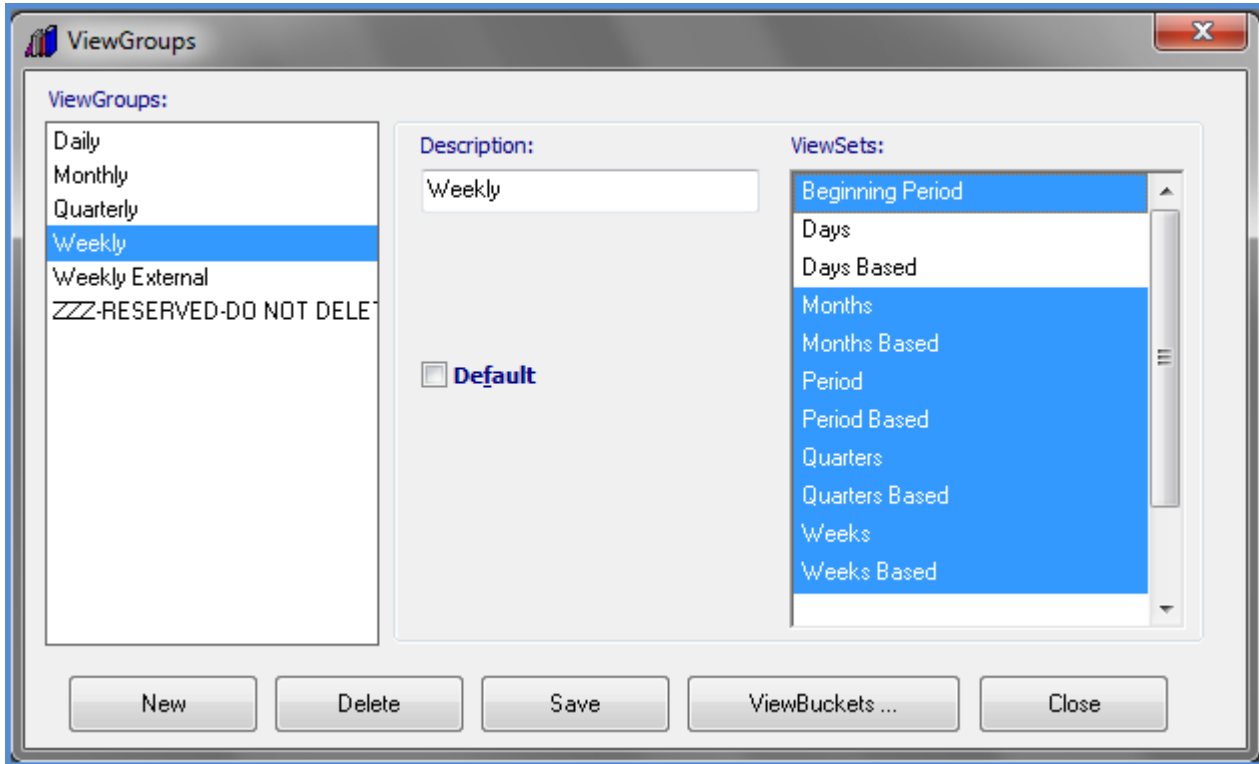

Here are some Actual Sales measures in Stratum.Viewer that belong to the Actual Sales Category.

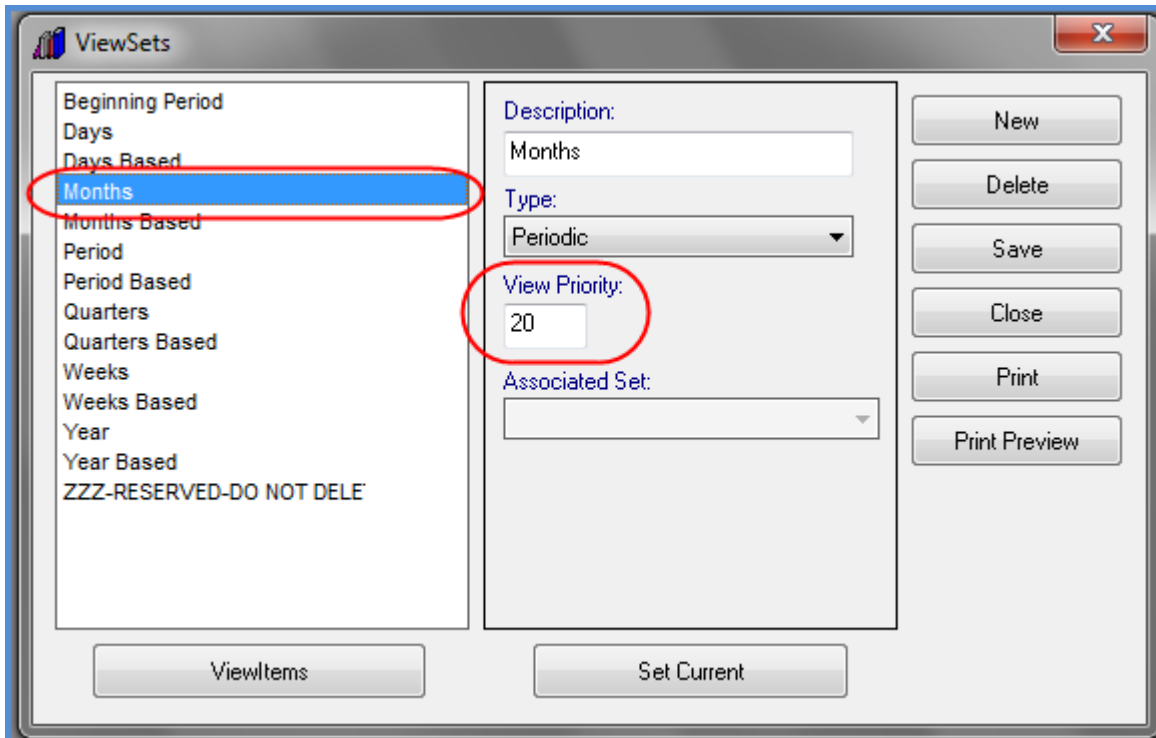

Here are the time units displayed in the Insert Measure Item window. The list of available Time Units is based on the Stratum.Planner ViewGroup associated with the selected measures.

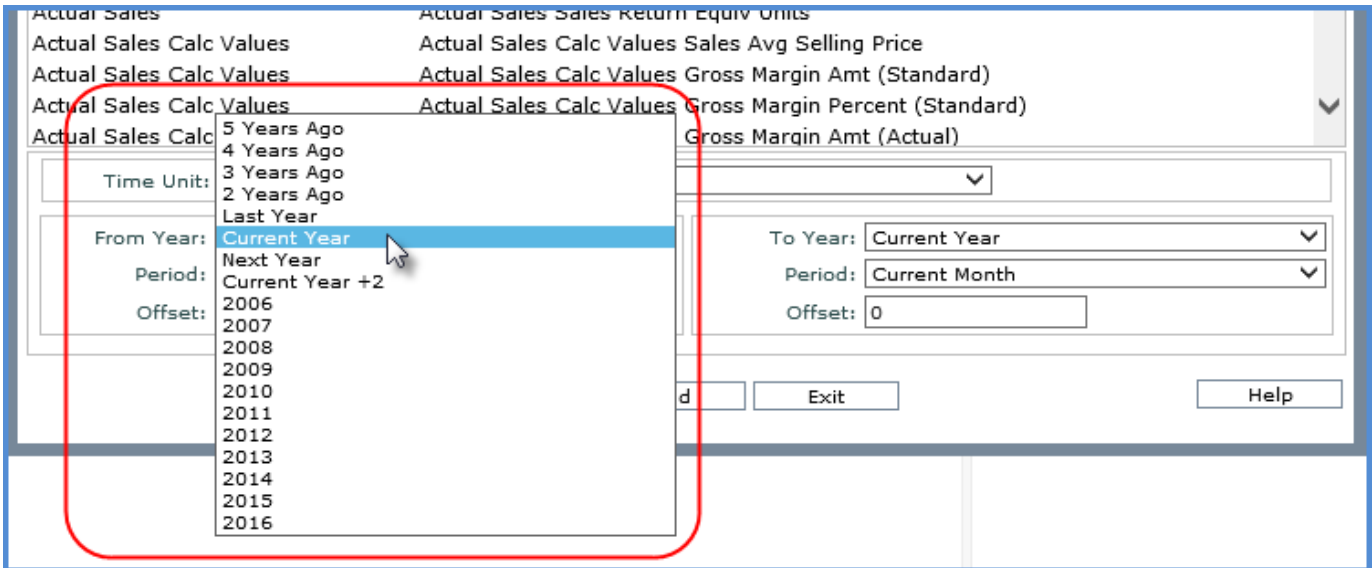

The Stratum.Planner ViewGroup associated with Actual Sales measures is “Weekly”. Each absolute periodic ViewSet associated with this ViewGroup becomes an available time unit for the Actual Sales measures. In this case, the units are Beginning Period, Months, Period, Quarters, and Weeks. They display in the Time Unit drop-down list based on the ViewSet Priority property assigned to them in Stratum.Planner.

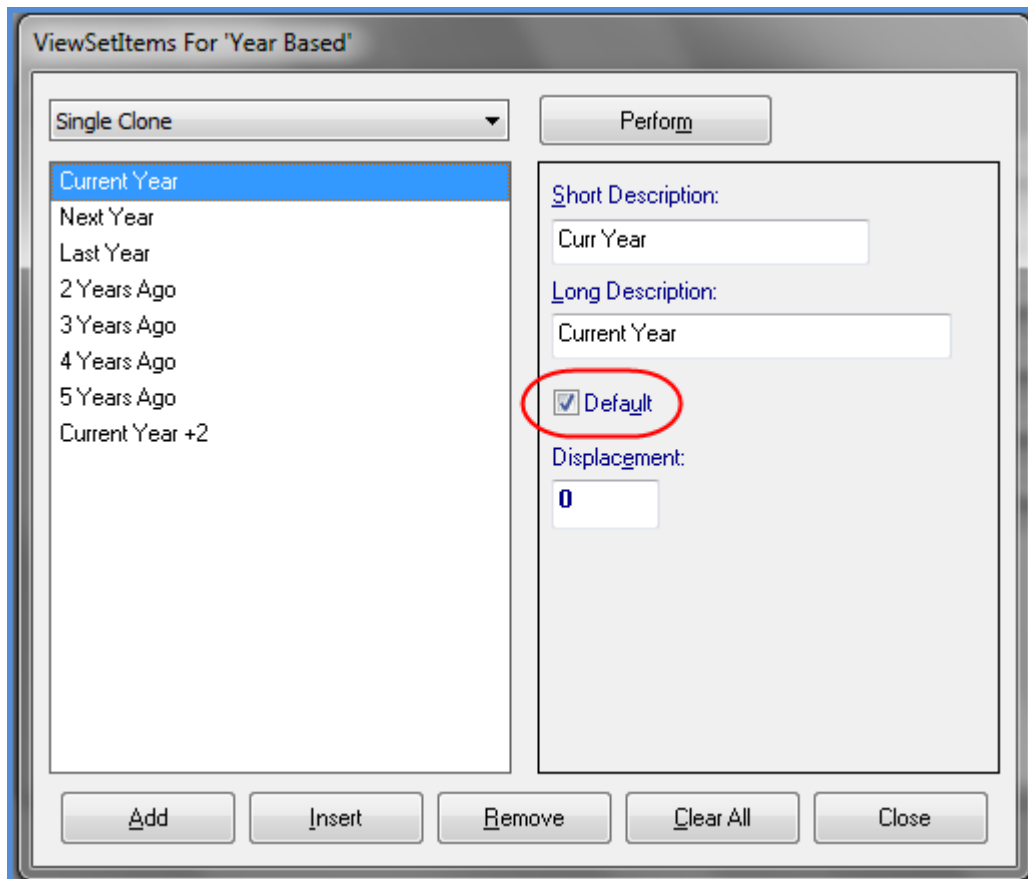

The Months ViewSet has the lowest priority. Therefore, it appears first in the list and is also the default time unit for Actual Sales measures.

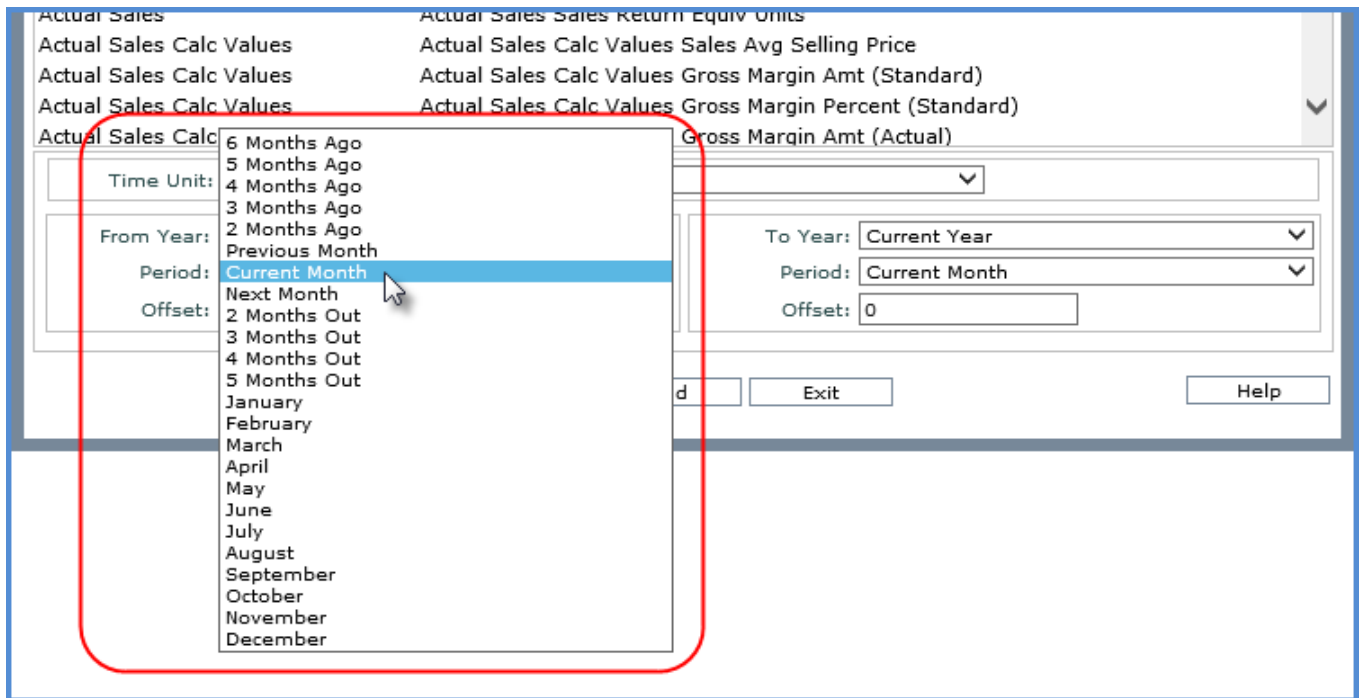

Here is the From Year drop-down list for the Months time unit in the Insert Measure Item window. The available years and year selected by default are determined by ViewSetItems from absolute and based year ViewSets.

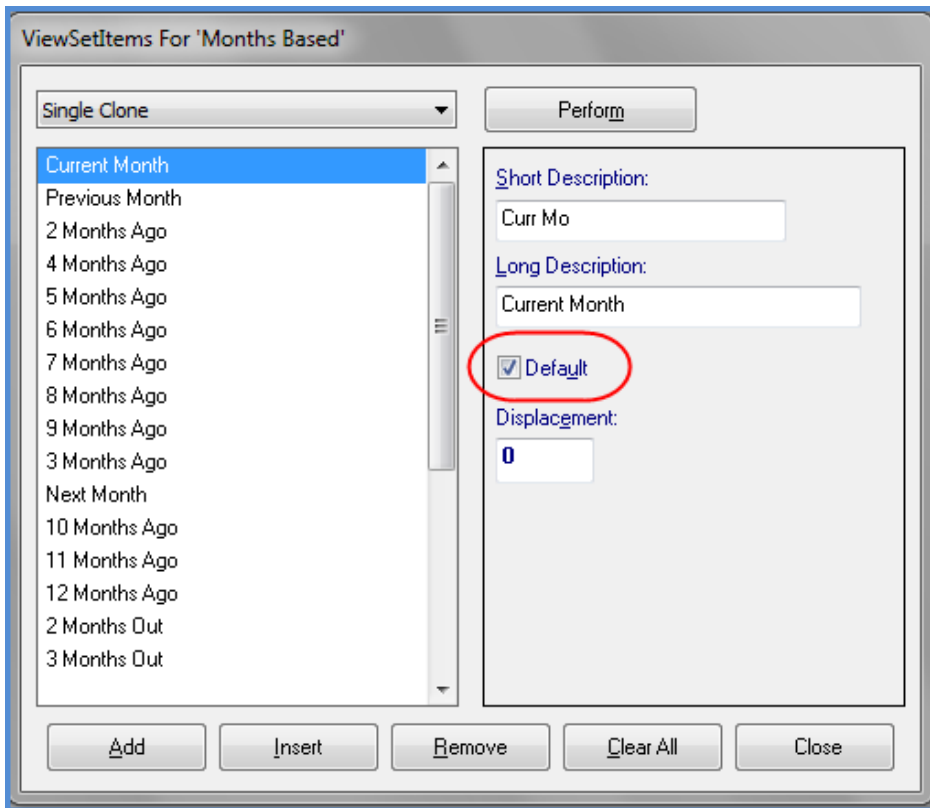

The From Year and To Year drop-down lists in the window are populated with the ViewSetItems from the absolute and based year ViewSets associated with the ViewGroup – in this example the Year Based and Years ViewSets. The years will display based on the priority of their associated ViewSets. In this example, the Based Year ViewSet has a lower priority than the Year ViewSet; therefore, the based years appear before the absolute years. The ViewSetItem defined as the Default for the based ViewSet will be selected as the default for the From Year and To Year drop-down lists. The Default ViewSetItem in this example is Current Year.

Here is the From Period drop-down list for the Months time unit in the Insert Measure Item window. The available periods and period selected by default are determined by ViewSetItems from the Months ViewSet and the associated based periodic ViewSet.

The From Period and To Period drop-down lists in the window will be populated with the applicable time unit's absolute and based periodic ViewSetItems – in this example they are from the Months Based and Months ViewSets. The months will display based on the priority of their associated ViewSets. In this example, the Based Months ViewSet has a lower priority than the Months ViewSet, therefore the based months appear before the absolute months. The ViewSetItem defined as the Default for the based ViewSet will be selected by default for the From Period and To Period drop-down lists. The Default ViewSetItem in this example is Current Month.

Time Dimension Creation for Stratum.Viewer

A single Time dimension with multiple [time hierarchies](#), levels, and attribute relationships is created by Stratum.Connector for Viewer when the application processes the Stratum.Connector for Viewer Analysis Services database. The Time dimension components are based on the ViewGroups and ViewSets associated with each measure group selected in Stratum.Connector for Viewer.

Note: See also [ViewGroups and ViewSets in the Stratum Storage Database](#), [Using Time Ranges vs. Time Hierarchies in Views](#), and [Stratum.Planner Influence on Time Range Properties for Measure Items](#).

Stratum.Connector for Viewer creates absolute, based, and rolling based time hierarchies that will be available in any view that has its [Time Range property set to No](#). The time hierarchies, levels, and attribute relationships can be used in rows, columns, and the view filter and can be used for filtering purposes, in graphs, and for calculated measure items. Time hierarchies and their components can be used in the same manner as non-time hierarchies and their components.

- [Time Hierarchies](#)
- [Time Members](#)

Time Hierarchies

When Stratum.Connector for Viewer creates the Time dimension, the application begins by analyzing the ViewSets associated with each selected Measure Group. ViewSets are the basis for creating the time hierarchies, levels, and attribute relationships. ViewSetItems of a ViewSet are used to create time members, and ViewSetItem long descriptions are used as the values for the time members.

Time Hierarchy Naming Conventions

Two time hierarchies are created for each absolute periodic ViewSet associated with a selected measure group in Stratum.Connector for Viewer.

The names of the first hierarchy and its levels follow the patterns of:

Hierarchy:	[Year ViewSet Name] + [Periodic ViewSet Name]
First Level:	[Year ViewSet Name]
Second Level:	[Periodic ViewSet Name]

The names of the second hierarchy and its level follow the patterns of:

Hierarchy:	[Periodic ViewSet Name]
Level:	[Periodic ViewSet Name]

Three time hierarchies are created for each based periodic ViewSet associated with a selected measure group in Stratum.Connector for Viewer.

The names of the first hierarchy and its levels follow the patterns of:

Hierarchy:	[Based Year ViewSet Name] + [Based Periodic ViewSet Name]
First Level:	[Based Year ViewSet Name]
Second Level:	[Based Periodic ViewSet Name]

The names of the second hierarchy and its level follow the patterns of:

Hierarchy:	Rolling + [Based Year ViewSet Name] + [Based Periodic ViewSet Name]
First Level:	[Based Year ViewSet Name]
Second Level:	[Based Periodic ViewSet Name]

The names of the third hierarchy and its level follow the patterns of:

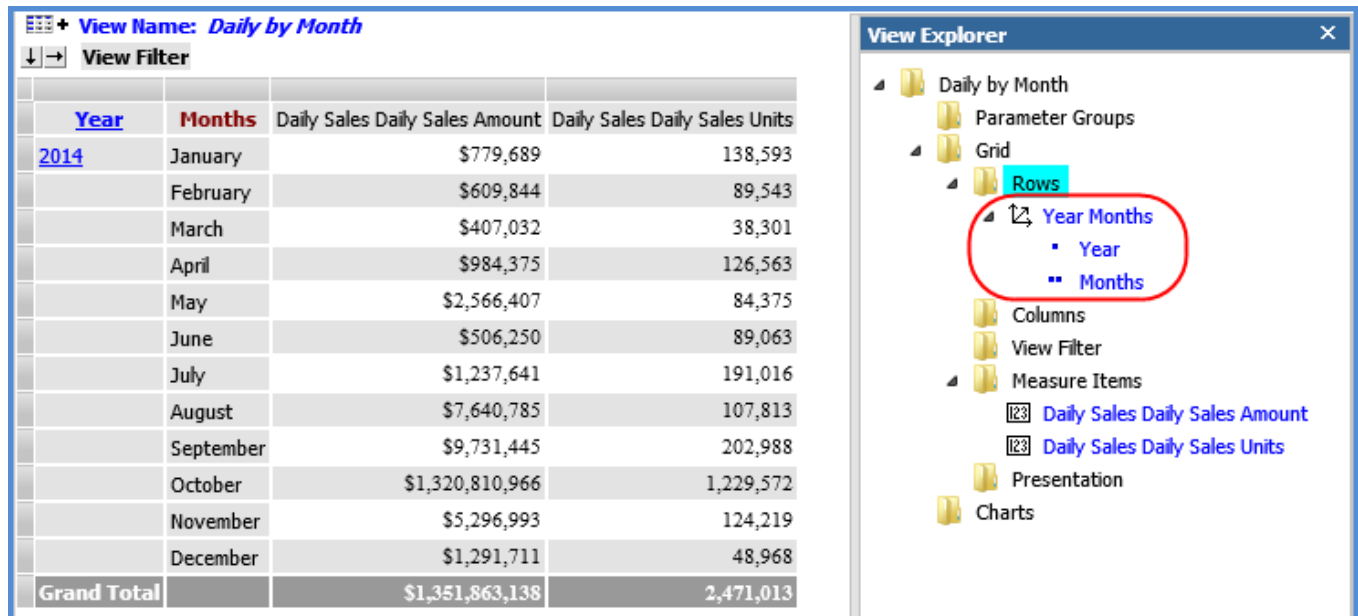

Hierarchy:	Rolling + [Based ViewSet Name]
Level:	[Based ViewSet Name]

Time Hierarchy Example

Following is an example of the hierarchies created for the absolute periodic ViewSet “Months” and the associated based periodic ViewSet “Months Based”.

Two hierarchies are created for the Months ViewSet.

1. The first hierarchy is Years Months, and it contains two levels. The first level is Year, for the associated Year ViewSet. The second level is Months, for the absolute periodic ViewSet. This time hierarchy can be used to create period based views that allow the user the ability to drill from year to period on the same axis.

The screenshot displays a BI tool interface. On the left, a data table titled "View Name: Daily by Month" is shown. The table has columns for Year, Months, Daily Sales, Daily Sales Amount, and Daily Sales Units. The Year column is filtered to 2014. The Months column lists the months from January to December. The Daily Sales column shows the number of sales, and the Daily Sales Amount column shows the total sales for each month. The Daily Sales Units column shows the number of units sold. A Grand Total row is at the bottom. On the right, the View Explorer pane shows the hierarchy of the view. The hierarchy is: Daily by Month > Grid > Rows > Year Months > Year > Months. The Year Months node is circled in red.

Year	Months	Daily Sales	Daily Sales Amount	Daily Sales Units
2014	January		\$779,689	138,593
	February		\$609,844	89,543
	March		\$407,032	38,301
	April		\$984,375	126,563
	May		\$2,566,407	84,375
	June		\$506,250	89,063
	July		\$1,237,641	191,016
	August		\$7,640,785	107,813
	September		\$9,731,445	202,988
	October		\$1,320,810,966	1,229,572
	November		\$5,296,993	124,219
	December		\$1,291,711	48,968
Grand Total			\$1,351,863,138	2,471,013

- The second hierarchy is Months, and it contains a single level with the same name. Stratum.Connector for Viewer also creates Named Sets associated with this level that can be used in creating period based YTD views. This time hierarchy can be used in conjunction with other time hierarchies to create period based views with year on one axis and period on the other.

Year >>	2012		2013		2014		Gr
Months	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units	Da
January	\$573,851	96,461	\$623,751	110,874	\$779,689	138,593

Grand Total	\$996,282,287	1,719,825	\$1,081,490,510	1,976,810	\$1,351,863,138	2,471,013	\$3,4

Three hierarchies are created for the Months Based ViewSet.

- The first hierarchy is Year Based Months Based, and it contains two levels. The first level is Year Based, for the associated based year ViewSet. The second level is Months Based, for the based periodic ViewSet. This time hierarchy can be used to create period based views that allow users the ability to drill from year to period on the same axis using based definitions. The members for this time hierarchy will change as the current month definition changes since the members for each based year must be part of the same absolute year.

Year Based	Year Based Months Based-Abs Year	Months Based	Year Based Months Based -Months Based-Abs Months	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units
Current Year	2014	8 Months Ago	January	\$779,689	138,593
		7 Months Ago	February	\$609,844	89,543
		6 Months Ago	March	\$407,032	38,301
		5 Months Ago	April	\$984,375	126,563
		4 Months Ago	May	\$2,566,407	84,375
		3 Months Ago	June	\$506,250	89,063
		2 Months Ago	July	\$1,237,641	191,016
		Previous Month	August	\$7,640,785	107,813
		Current Month	September	\$9,731,445	202,988
		Next Month	October	\$1,320,810,966	1,229,572
		2 Months Out	November	\$5,296,993	124,219
		3 Months Out	December	\$1,291,711	48,968
Grand Total				\$1,351,863,138	2,471,013

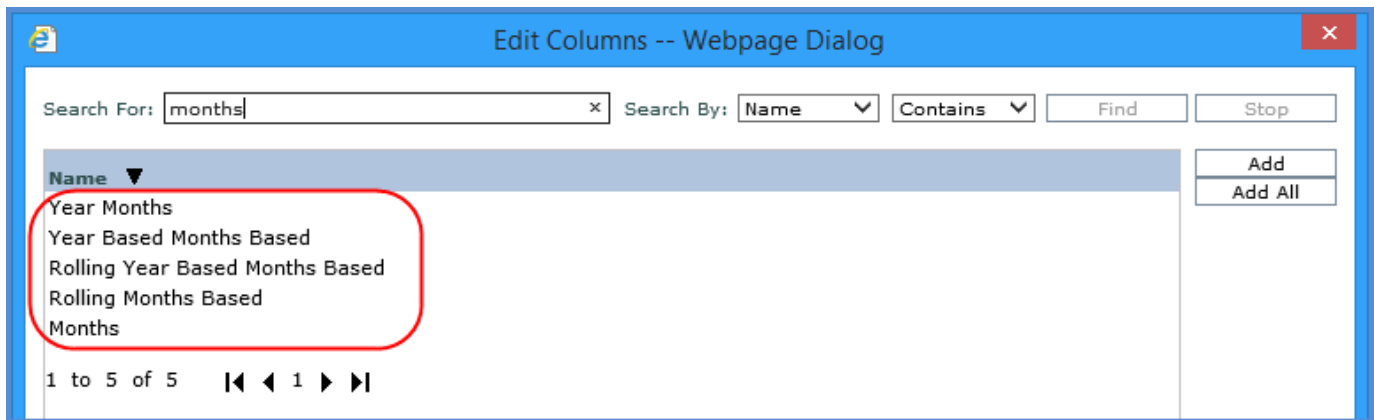

2. The second hierarchy is Rolling Year Based Months Based, and it also contains two levels. The first level is Year Based, for the associated based year ViewSet. The second level is Months Based, for the based periodic ViewSet. This time hierarchy can be used to create period based views that allow users the ability to see a rolling set of periods that can cross year boundaries. Since the members for a rolling based year do not have to belong to the same absolute year, this hierarchy should not be used in views that show annual data.

Year Based	Rolling Year Based Months Based-Year Based-Abs Year	Months Based	Rolling Year Based Months Based-Abs Months	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units
Current Year	2014	6 Months Ago	2014/March	\$407,032	38,301
		5 Months Ago	2014/April	\$984,375	126,563
		4 Months Ago	2014/May	\$2,566,407	84,375
		3 Months Ago	2014/June	\$506,250	89,063
		2 Months Ago	2014/July	\$1,237,641	191,016
		Previous Month	2014/August	\$7,640,785	107,813
		Current Month	2014/September	\$9,731,445	202,988
		Next Month	2014/October	\$1,320,810,966	1,229,572
		2 Months Out	2014/November	\$5,296,993	124,219
		3 Months Out	2014/December	\$1,291,711	48,968
Grand Total				\$1,350,473,605	2,242,877

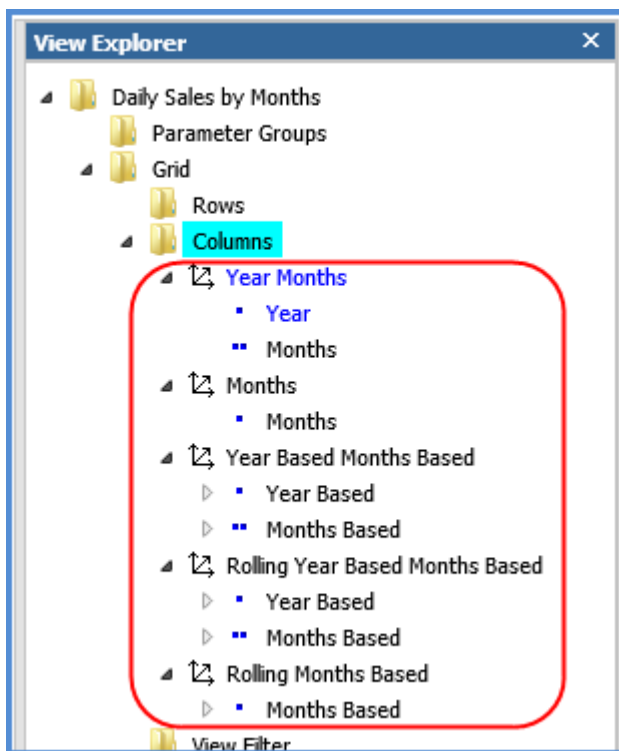

3. The third hierarchy is Rolling Months Based, and it contains a single level with the same name for the based ViewSet. This time hierarchy can be used in conjunction with other time hierarchies to create period based view with year on one axis and period on the other.

Year Based	2 Years Ago	Last Year	Current Year				
	2012	2013	2014				
Months Based	Rolling Months Based-Months Based-Abs Months	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units	Daily Sales Daily Sales Amount	Daily Sales Daily Sales Units
6 Months Ago	March	\$299,575	26,658	\$325,625	30,641	\$407,032	38,301
5 Months Ago	April	\$724,500	88,088	\$787,500	101,250	\$984,375	126,563
4 Months Ago	May	\$1,888,875	58,725	\$2,053,125	67,500	\$2,566,407	84,375
3 Months Ago	June	\$372,600	61,988	\$405,000	71,250	\$506,250	89,063
2 Months Ago	July	\$910,904	132,947	\$990,113	152,813	\$1,237,641	191,016
Previous Month	August	\$5,623,618	75,038	\$6,112,628	86,250	\$7,640,785	107,813
Current Month	September	\$7,162,344	141,280	\$7,785,156	162,390	\$9,731,445	202,988
Next Month	October	\$972,116,889	855,782	\$1,056,648,773	983,657	\$1,320,810,966	1,229,572
2 Months Out	November	\$3,898,587	86,456	\$4,237,594	99,375	\$5,296,993	124,219
3 Months Out	December	\$950,700	34,082	\$1,033,369	39,175	\$1,291,711	48,968
4 Months Out	January	\$573,851	96,461	\$623,751	110,874	\$779,689	138,593
5 Months Out	February	\$1,759,845	62,322	\$487,875	71,635	\$609,844	89,543
Grand Total		\$996,282,287	1,719,825	\$1,081,490,510	1,976,810	\$1,351,863,138	2,471,013

The image that follows shows the months hierarchies in the Stratum.Viewer Edit window.

The following view explorer example and table show the levels for the hierarchies. Here are the Months and Months Based hierarchies and levels as seen in view explorer.

Similar hierarchies are created for the other absolute based ViewSets as shown in this table.

ViewSet:	Hierarchies:	Levels:
Quarters	Year Quarters	Year
		Quarters
	Quarters	Quarters
Quarters Based	Year Based Quarters Based	Year Based
		Quarters Based
	Rolling Year Based Quarters Based	Year Based

		Quarters Based
	Rolling Quarters Based	Quarters Based
Months	Year Months	Year
		Months
	Months	Months
Months Based	Year Based Months Based	Year Based
		Months Based
	Rolling Year Based Months Based	Year Based
		Months Based
	Rolling Months Based	Months Based
Weeks	Year Weeks	Year
		Weeks
	Weeks	Weeks
Weeks Based	Year Based Weeks Based	Year Based
		Weeks Based
	Rolling Year Based Weeks Based	Year Based
		Weeks Based
	Rolling Weeks Based	Weeks Based

Time Members

The next two sections have information about the members for the different types of time hierarchies. ViewSetItem long descriptions are used as the values for time members.

Absolute Time

Time hierarchies built for absolute ViewSets have member lists for specific periods of time. Consider the hierarchies and levels created for the Months ViewSet earlier in this topic. Example member lists for each level are shown below along with images from Stratum.Planner showing the ViewSetItem long descriptions.

Hierarchy: Year Months

Level 1:	Level 2:
Year	Months
2012	January February March

2013	December
	January
	February
	March

2014	December
	January
	February
	March

	December

Hierarchy: Months

Level:
Months
January
February
...
December

Here are the related long descriptions from the Year and Months ViewSetItems in Stratum.Planner.

The screenshot shows a window titled "ViewSetItems For 'Year'". At the top left is a dropdown menu set to "Single Clone" and a "Perform" button. Below this is a list of years from 2006 to 2015. The year 2014 is highlighted in blue. To the right of the list are three input fields: "Short Description:" with the value "2014", "Long Description:" with the value "2014" (circled in red), and "Year:" with the value "2014". At the bottom of the window are five buttons: "Add", "Insert", "Remove", "Clear All", and "Close".

Based Time

Remember there are three time hierarchies built for based periodic ViewSets. The first hierarchy members are determined by absolute member values that fall into the actual calendar years. Example member lists for each level follow along with images from Stratum.Planner showing the ViewSetItem long descriptions.

Here are example members for levels in the first hierarchy, Year Based Months Based. The member list for Months Based will vary depending on which Based Members fall into the actual calendar years. In the example below, April 2014 is the current month. Given this, the member 4 Months Ago will not be included in the member list for the Months Based level because it does not belong to the current year. For example, Current Year Current Period = April 2014, Current Year Previous Month = March 2014, Current Year 2 Months Ago = February 2014, Current Year 3 Months Ago = January 2014. This means that Current Year 5 Months Ago corresponds to December 2013 and since it is not part of Year 2014, that member will not apply to the Months Based member list.

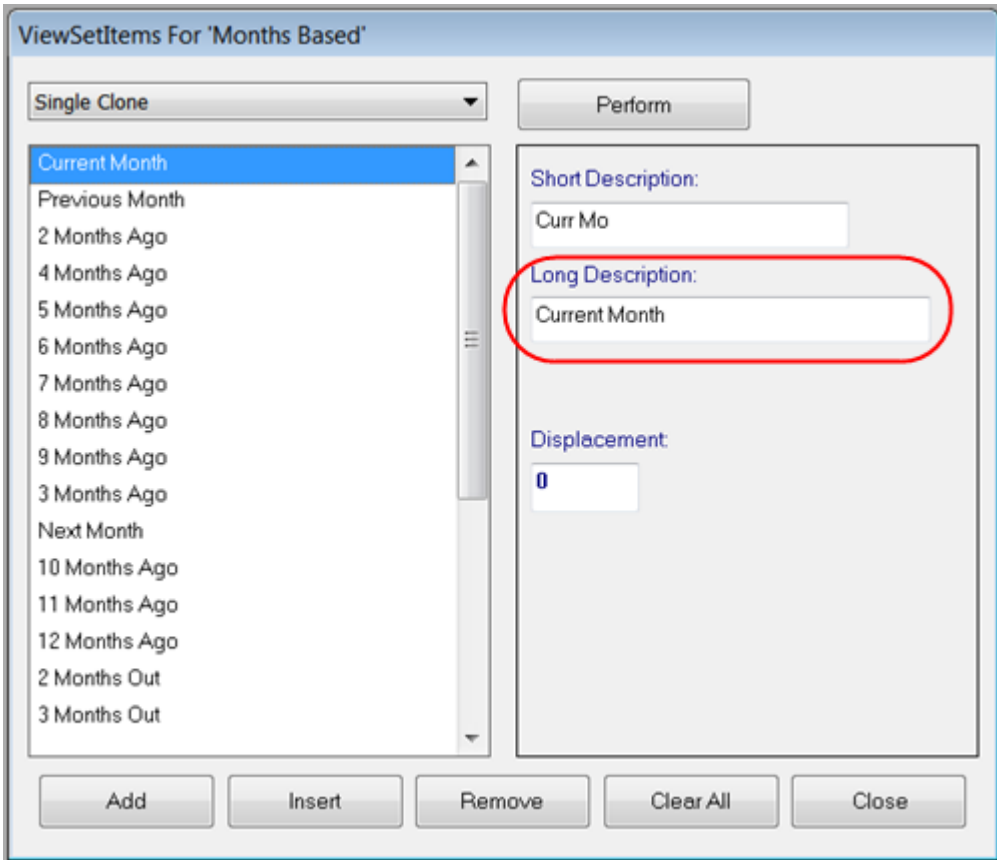

Hierarchy: Year Based Months Based

Level 1:		Level 2:	
Year Based	Absolute Year	Months Based	Absolute Month
2 Years Ago	2012	3 Months Ago	January 2012
2 Years Ago	2012	2 Months Ago	February 2012
2 Years Ago	2012	Previous Month	March 2012
2 Years Ago	2012	Current Month	April 2012
Last Year	2013	3 Months Ago	January 2013
Last Year	2013	2 Months Ago	February 2013
Last Year	2013	Previous Month	March 2013

Last Year	2013	Current Month	April 2013
Current Year	2014	3 Months Ago	January 2014
Current Year	2014	2 Months Ago	February 2014
Current Year	2014	Previous Month	March 2014
Current Year	2014	Current Month	April 2014

Here are the related long descriptions from Year Based and Months Based ViewSetItems in Stratum.Planner. The corresponding absolute ViewSetItems are the ones shown earlier in this section.

The screenshot shows a software interface titled "ViewSetItems For 'Year Based'". It features a list of items on the left side, with "Current Year" selected. To the right of the list are three input fields: "Short Description" with the value "Curr Year", "Long Description" with the value "Current Year" (highlighted with a red oval), and "Displacement" with the value "0". At the top right is a "Perform" button. At the bottom are five buttons: "Add", "Insert", "Remove", "Clear All", and "Close".

As the current month changes, the members for each based year and their Absolute Year and Month are updated. For example, in May 2014 the 4 Months Ago member is added to each based year and the Absolute Year and Month are updated for all members to what is shown below.

Level 1:		Level 2:	
Year Based	Absolute Year	Months Based	Absolute Month
2 Years Ago	2012	4 Months Ago	January 2012
2 Years Ago	2012	3 Months Ago	February 2012
2 Years Ago	2012	2 Months Ago	March 2012
2 Years Ago	2012	Previous Month	April 2012
2 Years Ago	2012	Current Month	May 2012
Last Year	2013	4 Months Ago	January 2013
Last Year	2013	3 Months Ago	February 2013
Last Year	2013	2 Months Ago	March 2013
Last Year	2013	Previous Month	April 2013
Last Year	2013	Current Month	May 2013
Current Year	2014	4 Months Ago	January 2014
Current Year	2014	3 Months Ago	February 2014
Current Year	2014	2 Months Ago	March 2014
Current Year	2014	Previous Month	April 2014
Current Year	2014	Current Month	May 2014

Hierarchy: Rolling Year Based Months Based

Example members for levels in the Rolling Year Based Months Based hierarchy are shown next. As in the previous example, April 2014 is the current period. The member list for the Year Based level always contains the same number of members. The number of members in the level cannot exceed the number of ViewSetItems in the related Absolute ViewSet. In the case of Rolling Year Based Months Based, it is related to the Monthly ViewSet; therefore, its Months Based level can contain up to and including 12 members.

In this case, each rolling based year has 12 members.

Level 1:		Level 2:	
Rolling Year Based Months Based	Absolute Year	Months Based	Absolute Month
2 Years Ago	2012	6 Months Ago	October 2011
2 Years Ago	2012	5 Months Ago	November 2011
2 Years Ago	2012	4 Months Ago	December 2011
2 Years Ago	2012	3 Months Ago	January 2012
2 Years Ago	2012	2 Months Ago	February 2012
2 Years Ago	2012	Previous Month	March 2012
2 Years Ago	2012	Current Month	April 2012
2 Years Ago	2012	Current Month +.1	May 2012
2 Years Ago	2012	Current Month + 2	June 2012
2 Years Ago	2012	Current Month + 3	July 2012
2 Years Ago	2012	Current Month + 4	August 2012
2 Years Ago	2012	Current Month + 5	September 2012
Last Year	2013	6 Months Ago	October 2012
Last Year	2013	5 Months Ago	November 2012
Last Year	2013	4 Months Ago	December 2012
Last Year	2013	3 Months Ago	January 2013
Last Year	2013	2 Months Ago	February 2013
Last Year	2013	Previous Month	March 2013
Last Year	2013	Current Month	April 2013
Last Year	2013	Current Month +.1	May 2013
Last Year	2013	Current Month + 2	June 2013
Last Year	2013	Current Month + 3	July 2013
Last Year	2013	Current Month + 4	August 2013
Last Year	2013	Current Month + 5	September 2013
Current Year	2014	6 Months Ago	October 2013
Current Year	2014	5 Months Ago	November 2013
Current Year	2014	4 Months Ago	December 2013
Current Year	2014	3 Months Ago	January 2014
Current Year	2014	2 Months Ago	February 2014
Current Year	2014	Previous Month	March 2014

Current Year	2014	Current Month	April 2014
Current Year	2014	Current Month +.1	May 2014
Current Year	2014	Current Month + 2	June 2014
Current Year	2014	Current Month + 3	July 2014
Current Year	2014	Current Month + 4	August 2014
Current Year	2014	Current Month + 5	September 2014

As the current month changes, the members for each Rolling Based Year remain the same. Only their Absolute Year / Month are updated. For example, in May 2014 the Absolute Year and Month is updated for all members to what is shown below.

Level 1:		Level 2:	
Rolling Year Based Months Based	Absolute Year	Months Based	Absolute Month
2 Years Ago	2012	6 Months Ago	November 2011
2 Years Ago	2012	5 Months Ago	December 2011
2 Years Ago	2012	4 Months Ago	January 2012
2 Years Ago	2012	3 Months Ago	February 2012
2 Years Ago	2012	2 Months Ago	March 2012
2 Years Ago	2012	Previous Month	April 2012
2 Years Ago	2012	Current Month	May 2012
2 Years Ago	2012	Current Month +.1	June 2012
2 Years Ago	2012	Current Month + 2	July 2012
2 Years Ago	2012	Current Month + 3	August 2012
2 Years Ago	2012	Current Month + 4	September 2012
2 Years Ago	2012	Current Month + 5	October 2012
Last Year	2013	6 Months Ago	November 2012
Last Year	2013	5 Months Ago	December 2012
Last Year	2013	4 Months Ago	January 2013
Last Year	2013	3 Months Ago	February 2013
Last Year	2013	2 Months Ago	March 2013
Last Year	2013	Previous Month	April 2013
Last Year	2013	Current Month	May 2013
Last Year	2013	Current Month +.1	June 2013
Last Year	2013	Current Month + 2	July 2013
Last Year	2013	Current Month + 3	August 2013
Last Year	2013	Current Month + 4	September 2013
Last Year	2013	Current Month + 5	October 2013
Current Year	2014	6 Months Ago	November 2013
Current Year	2014	5 Months Ago	December 2013

Current Year	2014	4 Months Ago	January 2014
Current Year	2014	3 Months Ago	February 2014
Current Year	2014	2 Months Ago	March 2014
Current Year	2014	Previous Month	April 2014
Current Year	2014	Current Month	May 2014
Current Year	2014	Current Month +.1	June 2014
Current Year	2014	Current Month + 2	July 2014
Current Year	2014	Current Month + 3	August 2014
Current Year	2014	Current Month + 4	September 2014
Current Year	2014	Current Month + 5	October 2014

Hierarchy: Rolling Months Based

Similar logic as used for the Rolling Year Based Months Based hierarchy is used to determine members for the Months Based level of the last time hierarchy of Rolling Months Based.

Level:	
Months Based	Absolute Month
6 Months Ago	October
5 Months Ago	November
4 Months Ago	December
3 Months Ago	January
2 Months Ago	February
Previous Month	March
Current Month	April
Current Month +.1	May
Current Month + 2	June
Current Month + 3	July
Current Month + 4	August
Current Month + 5	September

If there were more than 12 ViewSetItems associated with Months Based, such as exists in this example, then Stratum.Connector for Viewer would allow members for the ViewSetItem in the 0 (zero) offset position as well as some prior to and after that position. The number of ViewSetItems before the 0 offset position that Stratum.Connector for Viewer includes is based on the formula $x/2$, where "x" equals the number of ViewSetItems for the Absolute ViewSet. The number of ViewSetItems after the 0 offset position that Stratum.Connector for Viewer includes is based on the formula $x/2 - 1$.

Note: In the event of ViewSetItems with no ViewSetItems after the 0 offset position, Stratum.Connector for Viewer would use the ViewSetItem in the offset position and take the remaining allowed number of members (x-1) from the positions prior to the offset position.

Offset Member Position:	ViewSetItems:
-20	Previous Month -20
.....
-1	Previous Month
0	Current Month
+1	Current Month +1
.....
+20	Current Month +20

Following the formula described above, members for these 12 ViewSetItems would be included as members for the Months Based level of the Rolling Year Based Months Based hierarchy:

- Previous Month -5
- Previous Month -4
- Previous Month -3
- Previous Month -2
- Previous Month -1
- Previous Month
- Current Month
- Current Month +1
- Current Month +2
- Current Month +3
- Current Month +4
- Current Month +5

Use Hyperlinks in a View

Hyperlinks can be added to measure items for use in directing users to other applications, websites or views. The hyperlinks can be used in combination with other measure item features, such as for measure items that display images in views.

The basic steps for adding a hyperlink and a few examples follow.

1. Double-click the measure item in [view explorer](#).
2. In the [Properties window](#), set the Hyperlink property to Yes.

- In the [Hyperlink Expression window](#), set up an expression to define the hyperlink and then click OK in that window.
- {Optional} Customize other measure item features such as applying a conditional format or pop-up label.

Example – Open a Website and Pass View Information to Website

Example 1

This example uses a URL only in the hyperlink expression. Clicking the hyperlink in the related view will access the Mapquest home page.

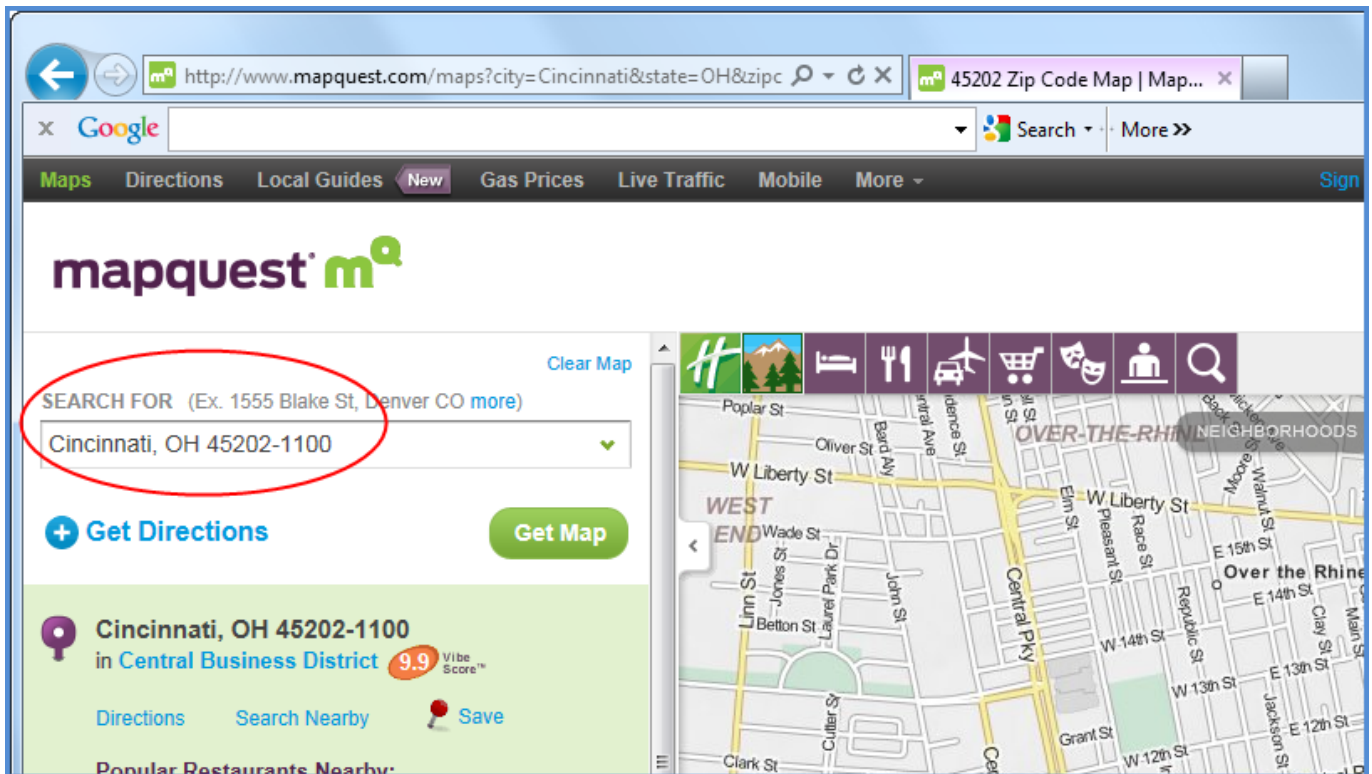

"http://www.mapquest.com"

Example 2 and 3

The next examples include view information in the hyperlink expression. In the first example, several attribute relationships for Customer Sold-To are used in the expression. The city, state, and postal code information derived from the current member are used as parameter values in the URL.

"http://www.mapquest.com/maps/map.adp?&city=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo City") + "&state=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Province State") + "&zipcode=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Postal Code") + "&country=US&cid=lfmaplink"

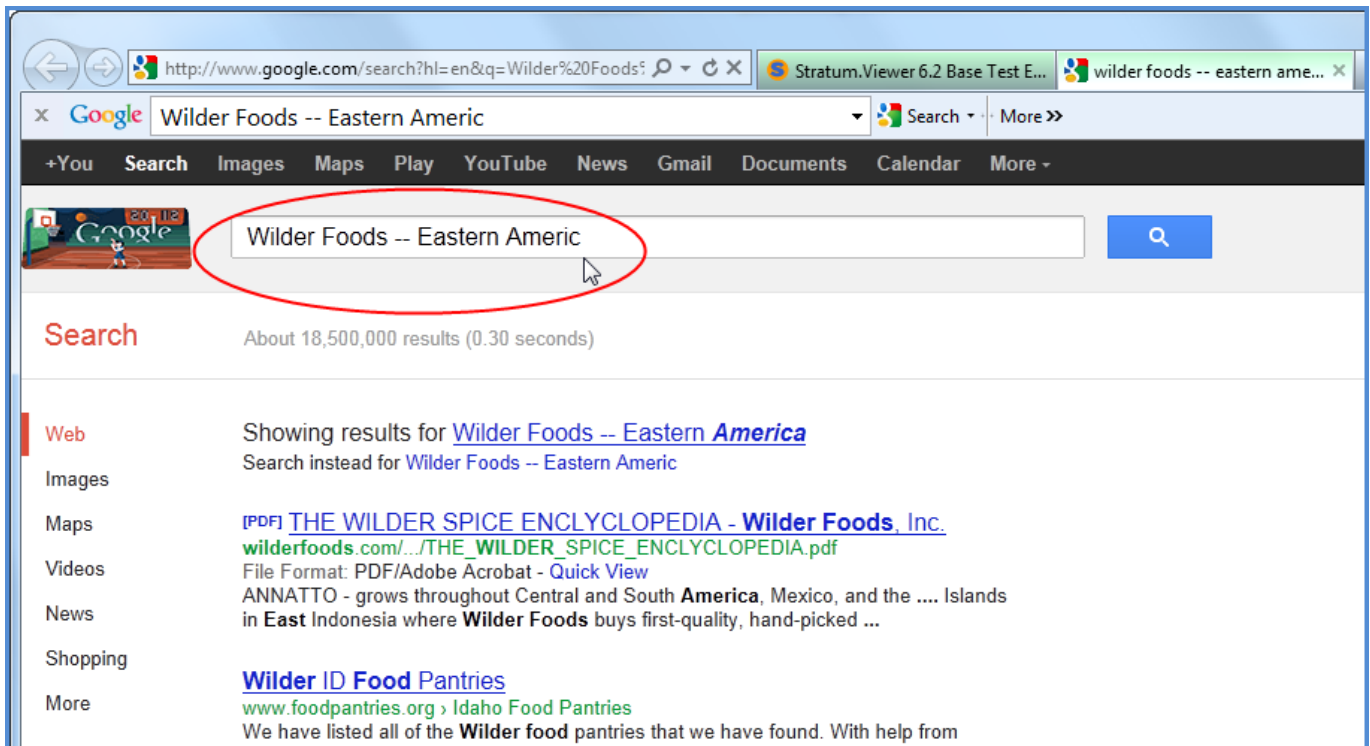

Customer Sold-To	SldTo Long Description	SldTo City	SldTo Province State	Map It!	Google It!	Actual Sales Sales Amount Wk 1 2014 to Wk 38 2014	% of Total
150100	Wilder Foods -- Eastern Americ	Cincinnati	OH		Google	\$620,691,969	23.34%
150110	Wilder Foods -- Western Americ	Denver	CO		Google		20.83%
150150	Harrington's -- Eastern	New York	NY		Google	\$362,426,374	13.63%
150180	GoodFoods -- Western	Beverly Hills	CA		Google	\$253,637,307	9.54%
150120	Sumpter Dist'n -- Eastern Divi	Chicago	IL		Google	\$183,844,440	6.91%

The second example has syntax that first checks to see if a particular attribute relationship exists. If so, the hyperlink opens to Google and searches on that attribute relationship. The SldTo Long Description is the attribute relationship used in the expression.

lIf([Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Long Description")=null, null, "http://www.google.com/search?hl=en&q=" + [Customer Sold-To].[Customer Sold-To].CurrentMember.Properties("SldTo Long Description"))

Customer Sold-To	SldTo Long Description	SldTo City	SldTo Province State	Map It!	Google It!	Actual Sales Sales Amount Wk 1 2014 to Wk 38 2014	% of Total	Actual Sales Wk 1 2013 to
150100	Wilder Foods -- Eastern Americ	Cincinnati	OH		Google	\$620,691,969	23.34%	\$1,000,000,000
150110	Wilder Foods -- Western Americ	Denver	CO		Google			
150150	Harrington's -- Eastern	New York	NY		Google	\$362,426,374	13.63%	
150180	GoodFoods -- Western	Beverly Hills	CA		Google	\$253,657,307	9.54%	
150120	Sumpter Dist'n -- Eastern Divi	Chicago	IL		Google	\$183,844,440	6.91%	

Example – Run another View and Filter it with Member Information from Original View

Example 1

This example opens another view and runs it based on that view definition only. The Stratum.Viewer URL and ID for the view are used in the expression.

“http://silvonxyz:60001/ViewWindow.aspx?ViewId=10391”

Here is a view containing the hyperlink.

Sales Dir	Product Category	PCat Long Description	Actual Sales Sales Amount Jan 14 to Sep 14	Budget Budget Amount Frozen Jan 14 to Sep 14
Helen Briggs	200	Fresh Vegetables	\$252,288,148	\$292,343,197
	201	Canned Fruit	\$1,592,446,315	\$1,911,515,291
	202	Pork		\$113,635,199
	203	Beef	\$82,517,494	\$95,124,551
	204	Fresh Fruit	\$174,091,318	\$283,061,692
	207	Frozen Fruit Products	\$62,914,286	\$73,351,506
	208	Frozen Prepared Dinners	\$163,326,546	\$193,111,782
	Helen Briggs Total		\$2,425,211,606	\$2,882,143,218
Steve Mentas	200	Fresh Vegetables	\$183,642,551	\$216,193,890
	201	Canned Fruit	\$484,321,714	\$580,609,405
	202	Pork	\$62,803,326	\$74,025,994

Here is the other view, Revenue Trending by Customer which will open and prompt you to choose a sales director for which you want to see view data. The prompting comes from parameters tied to a level in the View Filter of the view.

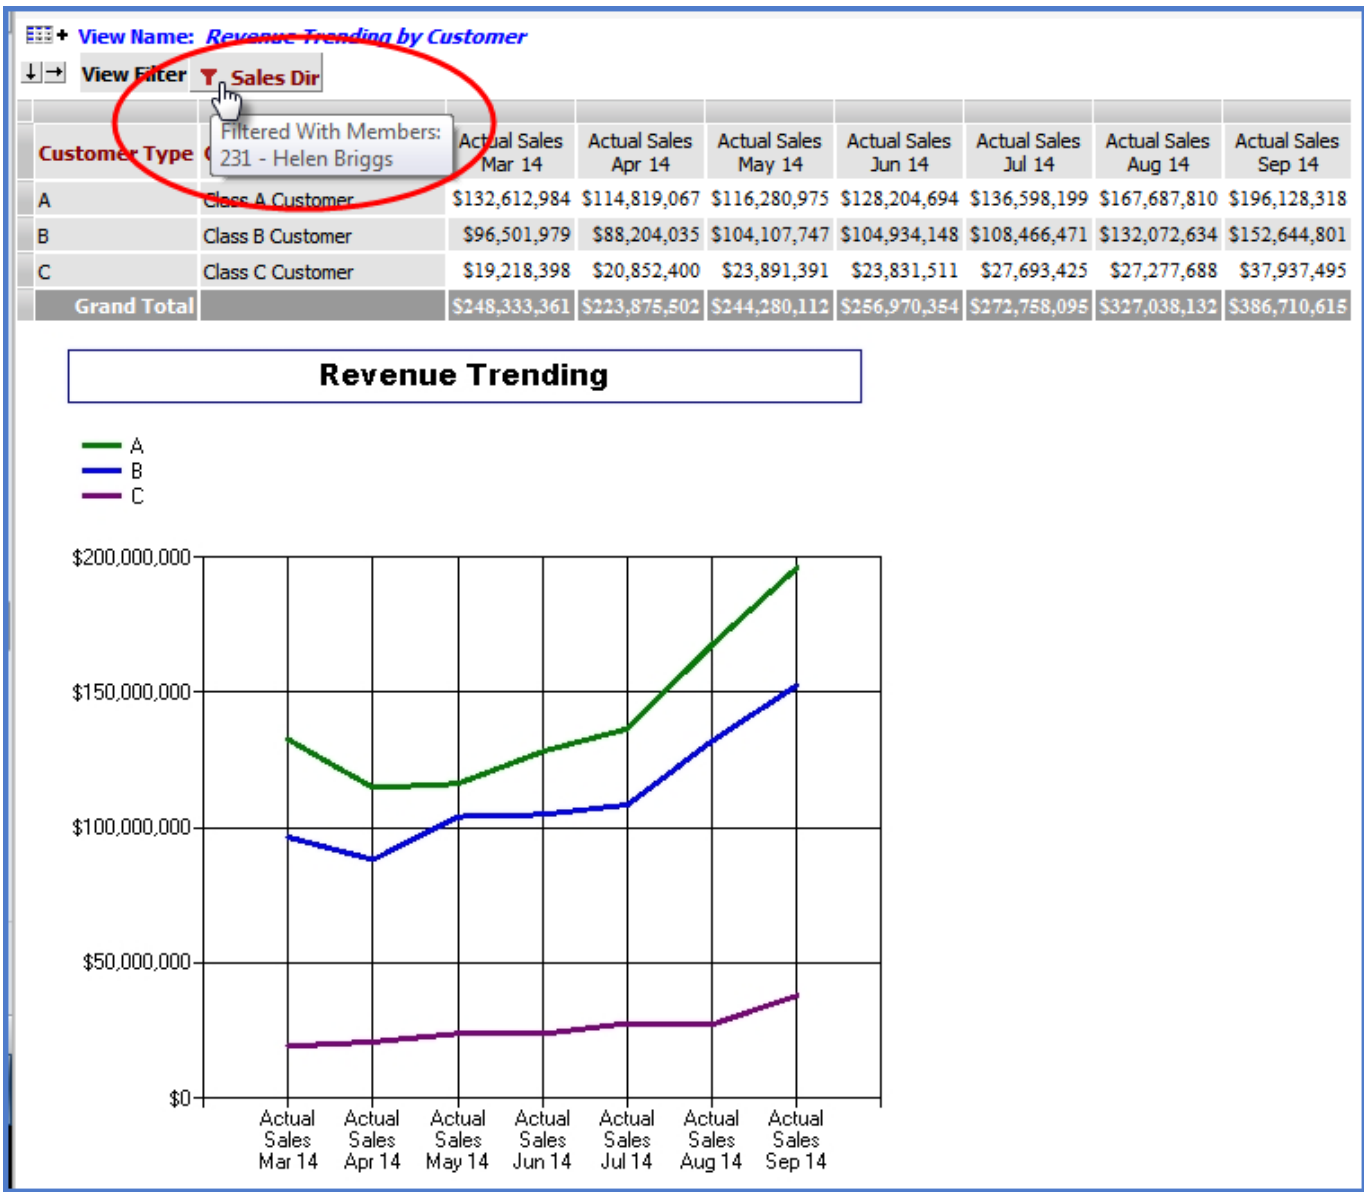

VIEW PROMPT [X]

Revenue Trending by Customer - Parameters

Sales Director Parameter

Choose a Sales Director [Y]

OK Cancel

Example 2

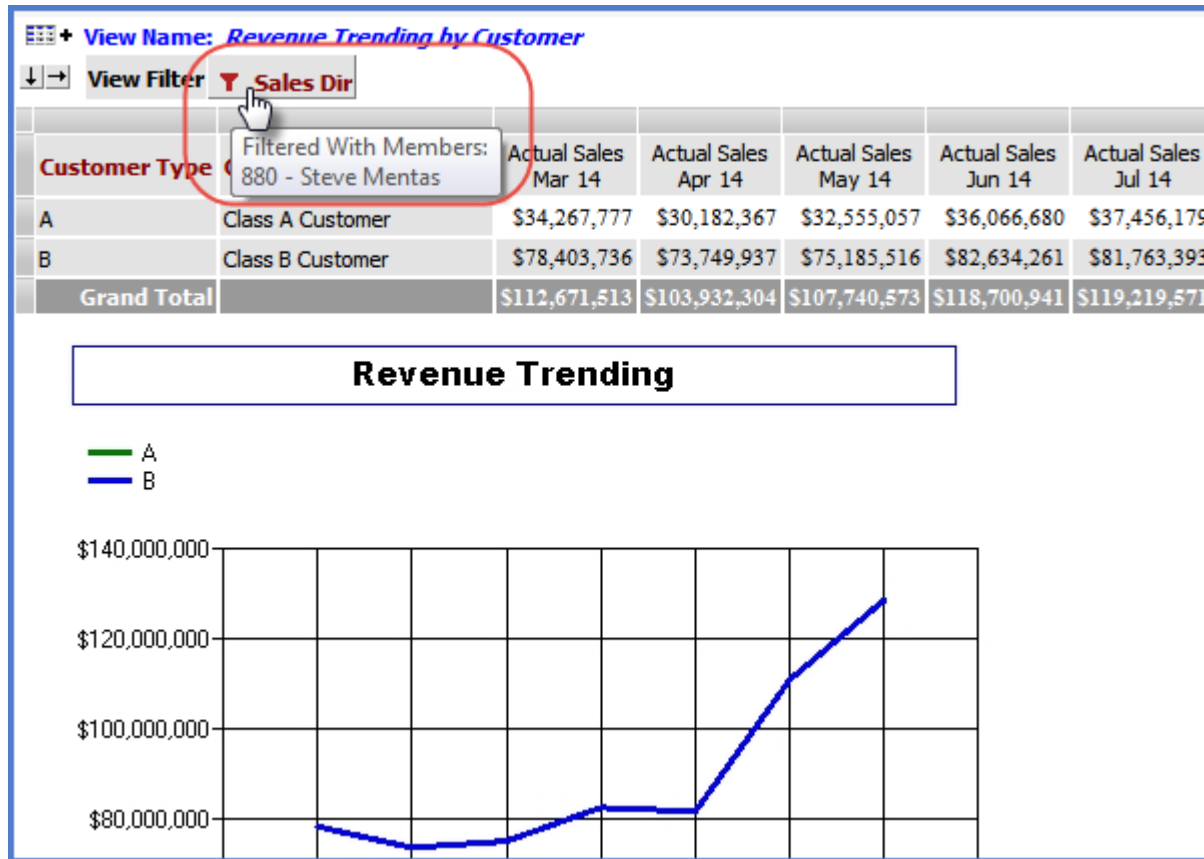

The previous expression is then adjusted to pass sales director information from the original view to the other view. The hyperlink will open the view and filter it for the sales director associated with the measure item value that was clicked.

" http://silvonxyz:60001/ViewWindow.aspx?ViewID=10391&vp:SalesDirector="+[Sales Director].[Sales Director].CurrentMember.name+ ""

The hyperlink is clicked for the measure item value of salesperson Steve Mentas.

Sales Dir	Product Category	PCat Long Description	Actual Sales Sales Amount Jan 14 to Sep 14	Budget Budget Amount Frozen Jan 14 to Sep 14
Helen Briggs	200	Fresh Vegetables	\$252,288,448	\$292,343,197
	201	Canned Fruit	\$1,592,446,315	\$1,911,515,291
	202	Pork	\$97,827,198	\$113,635,199
	203	Beef	\$82,317,494	\$95,124,551
	204	Fresh Fruit	\$174,091,318	\$203,061,692
	207	Frozen Fruit Products	\$62,914,286	\$73,351,506
	208	Frozen Prepared Dinners	\$163,326,546	\$193,111,782
	Helen Briggs Total		\$2,882,143,218	
Steve Mentas	200	Fresh Vegetables	\$185,042,551	\$216,193,890
	201	Canned Fruit	\$484,321,714	\$580,609,405
	202	Pork	\$62,803,320	\$74,025,994
	203	Beef	\$69,323,815	\$81,514,575
	204	Fresh Fruit	\$137,307,091	\$162,435,699
	207	Frozen Fruit Products	\$41,903,594	\$49,219,603

The trending view opens and is filtered for that particular sales director. No prompting to choose a parameter occurs because the hyperlink determines the sales director to use in the filter.

ViewGroups and ViewSets in the Stratum Storage Database

This topic briefly describes the concepts of Structure Codes, ViewSets, and ViewGroups in the Stratum storage database. Understanding these concepts can help you understand the measures, Time dimension, time hierarchies, and named sets that can be generated by Stratum.Connector for Viewer when your administrators set up the Stratum.Connector for Viewer Analysis Services cube and database for your Stratum.Viewer implementation.

Stratum Structure Codes

During the setup of a storage database for Stratum applications, a System Administrator sets up Structure Codes. Structure Codes determine the structure of warehouse data. When setting up Structure Codes, a Stratum System Administrator determines:

1. The dimensions.
2. How many buckets of time to accumulate data into for each Structure Code -- such as 64 (for information to be organized into a weekly structure) or 12 (for information to be accumulated into a monthly structure).

Once Structure Codes and related data tables are created, additional items are set up to determine how time can be analyzed in various Stratum applications. ViewGroups are associated with Structure Codes. ViewGroups, along with the ViewSets and ViewSetItems the groups are comprised of, determine how users will be able to analyze data in the Structure Codes. Buckets of information can be grouped together in a weekly, monthly, quarterly, or other fashion to give Stratum users flexibility in how they can analyze their data.

Examples of Structure Codes are shown below.

Structure Code:	Description:	Buckets:	Categories:
OR	Sales	64	Sales
IN	Inventory	64	Inventory
FC	Forecast	122	Forecast

Stratum.Connector for Viewer organizes this Stratum data into measure groups that get displayed in that application's Measure Group Selection window. A measure group is made up of partitions, dimensions, and measures based on Structure Code definitions. Examples of measure groups are Accounts Payable - Open, Actual Sales, Budget, Daily Sales, Forecast, Inventory, and Open Orders. Measure groups become the categories seen in places such as the Stratum.Viewer Role Maintenance window and [Insert Measure Item window](#).

Stratum ViewGroups and ViewSets

As described previously, ViewGroups are associated with Structure Codes to determine how users will be able to analyze their data -- such as in a weekly, monthly, or quarterly format.

ViewSets define the year and period definitions available in Stratum. ViewSetItems define the periods of time that make up each ViewSet. For example, a yearly ViewSet would be defined in terms of calendar years with ViewSetItems such as 2009, 2010, 2011, 2012, and so forth. A monthly ViewSet would be defined in terms of calendar months with ViewSetItems such as January, February, March, and so forth.

ViewSets can be either absolute or based. Absolute ViewSets are for specific periods of time. Examples are January 2014 or Week 5 of 2014. Based ViewSets are used to define time periods based on Absolute ViewSets. For example, Current Period of Current Year.

For the three Structure Codes described earlier in this topic, ViewSets such as the eight below could be set up in preparation for creating ViewGroups.

ViewSet:	ViewSetItems:
Year	2008, 2009, 2010, 2011, 2012, 2013, and 2014
Quarters	First Quarter, Second Quarter, Third Quarter, and Fourth Quarter
Months	January, February, March, April, and so forth
Weeks	Week 1, Week 2, Week 3, Week 4, and so forth
Year Based	2 Years Ago, Previous Year, Current Year, Next Year, and so forth
Quarters Based	2 Quarters Ago, Previous Quarter, Current Quarter, Next Quarter, and so forth
Months Based	2 Months Ago, Previous Month, Current Month, Next Month, and so forth
Weeks Based	2 Weeks Ago, Previous Week, Current Week, Next Week, and so forth

The ViewGroups can then be set up. A Weekly ViewGroup could be set up and then associated with the Sales and Inventory Structure Codes. A Monthly ViewGroup could be set up for the Forecast Structure Code.

ViewGroup:	ViewSets in the ViewGroup:
Weekly (created for use with the Sales and Inventory Structure Codes)	Year Quarters Months Weeks Year Based Quarters Based Months Based Weeks Based
Monthly (created for use with the Forecast Structure Codes)	Year Quarters Months Year Based Quarters Based Months Based

Stratum.Connector for Viewer uses this Stratum data along with the dimension and measure group selections you make in Stratum.Connector for Viewer to generate various elements of time for use in Stratum.Viewer. Those elements include a Time dimension, named sets, and [time range](#) properties (units of time, years, and periods).

Here is a summary of how ViewSets and ViewSetItems are used. See [Time Dimension Creation for Stratum.Viewer](#), [Stratum.Planner Influence on Time Range Properties for Measure Items](#), and [Stratum.Planner Influence on Caption Variables](#) for detailed information and examples.

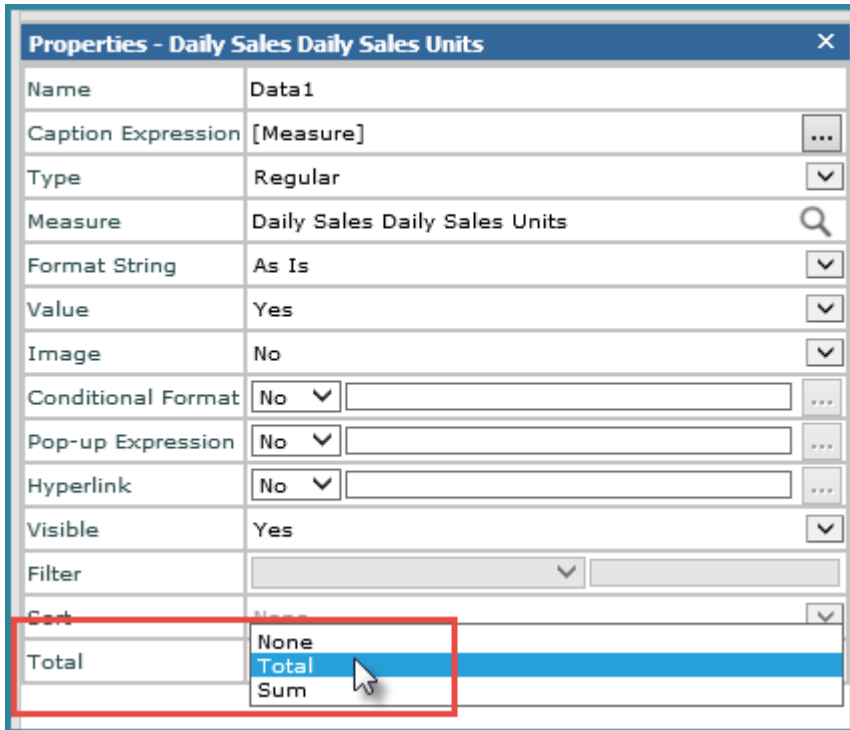

- ViewSets are used to create hierarchies, levels, and attribute relationships in the Time dimension. ViewSetItems of a ViewSet are used to create time members. The ViewSetItem long descriptions are used as the values for these members.
- The ViewGroup defined for a Structure Code determines the time units (quarters, months, etc.) available for each measure in the Stratum.Viewer [Insert](#) and [Edit Measure Item window](#). Each absolute periodic ViewSet becomes a time unit. The ViewSet priority determines the order in which they display in the Time Unit drop-down list. The ViewSetItems from the absolute and based year ViewSets associated with the selected measure are used to create the available To / From years for the time units. The ViewSetItems from the absolute and based periodic ViewSets associated with the measure are used to create the available To / From periods for each time unit. The based ViewSetItem marked as "Default" in Stratum.Planner will be used as the default year / period for the corresponding time unit.
- The short description, long description, and years (when applicable) of ViewSetItems are variables that can be used when setting up measure item captions. The variables are available when working with [regular measure items](#) that have time ranges.

When to Use the “Sum” Total Setting for Measure Items

A “Sum” type of total is one of three available Total settings for measure items in Stratum.Viewer (the other types are Total and None). A Sum total designation means that Viewer will generate totals by adding the values displayed in measure item detail cells. That summing will be used to generate the Grand Totals, sub-totals, and All Others.

The Sum type of total is intended for special cases where you don’t want any underlying calculations that Viewer performs to generate detail values applied when generating total values. You might choose to use a Sum total when a measure item calculation includes an IIF statement, such as a calculation with IF, Then, Else conditions.

Two examples follow. The first shows an example of when you would use the Total designation for a measure item. The second shows an example of using the Sum designation.

Example 1: Measure Item Set to “Total”

In most cases, the default “Total” setting for measure items will be appropriate for your views. A “Total” designation takes into account any underlying calculations for a measure item’s definition when generating Grand Totals, sub-totals, and All Others – such as calculations defined in a measure item expression or associated with a Stratum.Planner calculated value.

Here is an example where the Total designation is preferred over Sum. The Average Selling Price has an underlying expression that divides Actual Sales Amount by Actual Sales Units. With the Total designation, the Grand Total is calculated by dividing the Grand Total sales by the Grand Total units sold.

View Name: <i>Product Sales and ASP</i>			
View Filter			
Product	Actual Sales Amount Jan to Sep '14	Actual Sales Units Jan to Sep '14	Avg Selling Price
Apple Filling 106oz BR* 0A	\$9,483	130	\$72.97
Blackberries 106oz BR* 0A	\$7,061	83	\$85.28
Blueberry Filling 106oz BR* 0A	\$3,686	51	\$72.85
Cherry Filling 106 oz BR* 0A	\$10,824	148	\$72.96
Escalloped Apples 106 oz BR* 0A	\$10,975	145	\$75.74
FrtCktail HS 106 oz BR* 0A	\$1,750	23	\$76.11
Grand Total	\$43,778	580	\$75.53
	Total	Total	Total

If you had used a Sum total in this case, the Grand Total would be the sum of the Average Selling Price detail values displayed for the six Products in the view. The Total designation is more appropriate than a Sum designation in this case.

View Name: <i>Product Sales and ASP</i>			
View Filter			
Product	Actual Sales Amount Jan to Sep '14	Actual Sales Units Jan to Sep '14	Avg Selling Price
Apple Filling 106oz BR* 0A	\$9,483	130	\$72.97
Blackberries 106oz BR* 0A	\$7,061	83	\$85.28
Blueberry Filling 106oz BR* 0A	\$3,686	51	\$72.85
Cherry Filling 106 oz BR* 0A	\$10,824	148	\$72.96
Escalloped Apples 106 oz BR* 0A	\$10,975	145	\$75.74
FrtCktail HS 106 oz BR* 0A	\$1,750	23	\$76.11
Grand Total	\$43,778	580	\$455.90
	Total	Total	Sum

Example 2: Measure Item Set to “Sum”

Here is an example where the Sum designation is preferred over Total. The Maximum Sales Potential measure item in the following view is a calculated measure item with an If, Then, Else statement built into it. It displays the actual sales value for a Product if that Product’s sales are greater than its budgeted sales. Otherwise, the calculation displays the budgeted sales value for the Product. The calculation is not applied to generate the Grand Total for the measure item because it has been assigned a “Sum” total. The Grand Total is the sum of the Maximum Sales Potential detail values displayed for the six Products in the view.

View Name: <i>Product Sales vs Budget YTD Months</i>			
View Filter			
Product	Actual Sales Amount Jan to Sep '14	Budget Amount Frozen Jan to Sep '14	Maximum Sales Potential
Pear Hlvs LS 12 oz BR* 3A	\$4,197	\$3,456	\$4,197
Pear Hlvs LS 12 oz BR* 3B	\$8,395	\$6,913	\$8,395
Pear Hlvs LS 12 oz BR* 3C	\$4,617	\$3,802	\$4,617
Pear Hlvs LS 12 oz BR* 4A	\$11,842	\$16,013	\$16,013
Pear Hlvs LS 12 oz BR* 4B	\$23,684	\$32,026	\$32,026
Pear Hlvs LS 12 oz BR* 4C	\$13,026	\$17,614	\$17,614
Grand Total	\$65,761	\$79,824	\$82,862
	Total	Total	Sum

If you had used a Total designation in this case, the results for the Grand Total calculation would display the greater of Grand Total sales compared to Grand total budget. In this example, the Sum designation is more appropriate than a Total designation.

Frequently Asked Questions (FAQ's)

What Happened to a Measure Item that Used to be in my View?

Measure items can be removed when:

- [The Time Range property for the view changes](#). That change can impact measure items and time hierarchies.
- [Your administrator changes the role for your user profile](#) such that you no longer have permission to access the underlying measure for the measure item.
- The underlying measure was removed from your Stratum.Connector for Viewer environment and is no longer available to any users.

Example Time Range Property Changes

All measure items will be removed from a view if you [change the Time Range property](#). Changing the property to No lets you use time hierarchies in the view. In that case, all measure items (they will have time ranges) will be removed. Changing the property back to Yes lets you use measure items with time ranges in the view. In that case, all measure items (they will not have time ranges) and all time hierarchies will be removed from the view.

Here is a view that has a Time Range property of Yes and measure items with time ranges on rows.

The screenshot shows a software interface with a data table and two side panels. The table displays various measure items with numerical values. The View Explorer panel shows a tree structure of the view, with 'Measure Items' highlighted. The Properties - Measure Items panel shows the 'Time Range' property set to 'Yes'.

Example Role Changes

Your role determines which dimension members and measures you can access in views and other parts of Stratum.Viewer. Roles can be changed over time. If your administrator changes your role to remove access to a measure, then you will no longer see that measure or measure items that were based on it in views.

Here is a view run by a user with access to all Actual Sales and Budget measures.

View Name: <i>Ship-To Market Sales vs Budget</i>				
View Filter Product Family				
Ship-To Market	Actual Sales Amount Sep 2013 to Sep 2014	Actual Sales Units Sep 2013 to Sep 2014	Budget Amount Sep 2013 to Sep 2014	Budget Units Sep 2013 to Sep 2014

What is the Difference between Hiding a Measure Item and Hiding its Value?

Hiding a measure item means that the row(s) or column(s) for it will no longer display in the view grid. If you just hide the value for a measure item, then the cells for that measure item will remain in the grid and only the numeric values for it will be hidden. If the measure has a conditional format or an image defined for it, then those items will still display when the value is hidden. To hide a measure item, you set its Visible property to No. To hide just the value, you set the Value property to No.

See also [Why Would I want to Hide a Measure Item Value?](#)

Why don't Totals Display in a View?

Totals will not display if they have been disabled:

- Totals can be disabled for individual levels and measures via the Totals property in their properties windows. If totals for all measure items have been disabled, no totals will display even if totals are enabled for levels.
- Totals can be disabled for all levels on rows and/or columns via the Totals properties on the axis icon pop-up menus  .

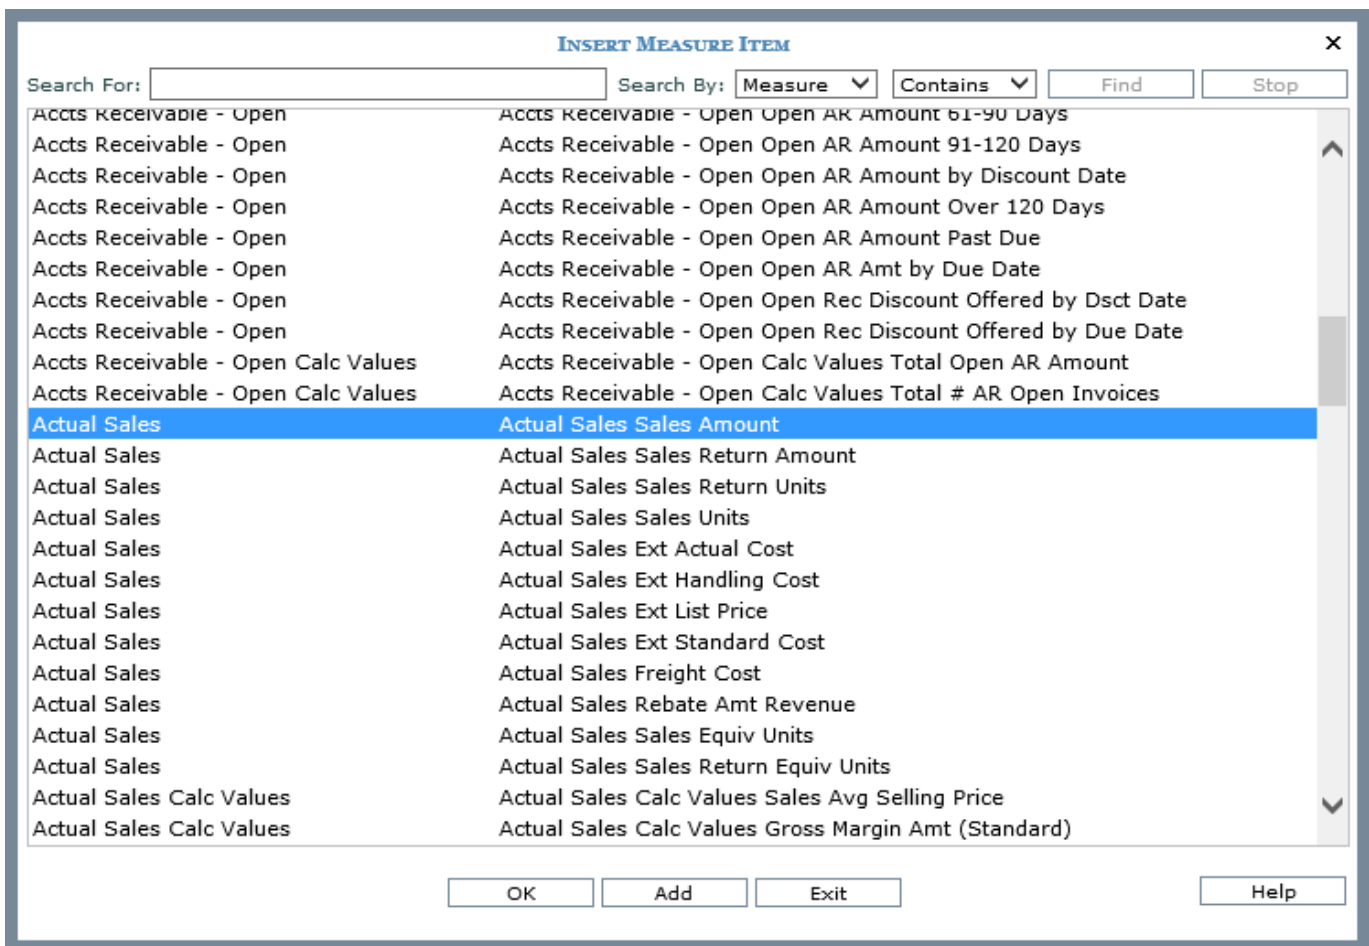

Why isn't there a Section for Time in the Insert/Edit Measure Item Window?

There won't be a section for time if the Time Range property for a view is set to No. The window containing that property is accessed by double-clicking the Measure Items folder in view explorer.

Example 1

Insert Measure Item window when Time Range = No:

Example 2

Insert Measure Item window when Time Range = Yes:

INSERT MEASURE ITEM [X]

Why Would I want to Hide a Measure Item Value?

A couple examples follow to show cases where you would choose to hide the measure item value.

In this first example, the user applied a conditional format to a measure item. The user only wants the conditional format indicators to show, so the Value property for the measure item was set to No. The user set up a pop-up label on the measure item that will show the measure item value when the indicator icon is hovered over with the cursor.

Calculated and Distinct Calculated Measure Item

Calculated measure items are based on expressions that you set up in the [Expression window](#). The measure items are calculations between pieces of data or groups of data. They can represent additions, subtractions, multiplications, divisions, etc. And, their expressions can be built using regular measure items, other calculated measure items, measures, members, named sets, and special functions such as an average, variances, and percent of total.

Calculations for a calculated measure item are executed for each member of a level. A calculated measure item with its Distinct property enabled is known as a distinct calculated data item, and the calculations for that type of measure item are executed once for each level rather than individually for each level member. In the following view, Var % YTD 2012 vs 2013 is a calculated measure item that is executed for Division F and G. The last measure item, % of Total 2013, is a distinct calculated measure item performed for the overall Division level.

Caption

The text that you see in view header cells for measure items are captions. Captions represent the rendered text of caption expressions, which are based on administrative defaults but can be [customized](#) by you. Other places that captions display are [view explorer](#), the [Edit Measure Item window](#), and the [Expression window](#).

Measure

Measures are the basic units of data for your dimensions, hierarchies, and levels. Measures are used to create and insert measure items into your views. They can also be used when building the expressions for calculated measure items.

The two measure items in the following view were created from two Daily Sales measures using the [Insert Measure Item window](#).

View Name: <i>Daily Sales by Customer Type</i>

Regular Measure Item

Regular measure items are items based on the measures in the Analysis Services database for your Stratum.Viewer environment. The [Insert Measure Item window](#) is used to create regular measure items within individual views.

Regular measure items can be created with or without time ranges, depending on the [Time Range property](#) for a view. If the Time Range property is Yes for a view, you can specify time ranges for its measure items. If the Time Range property is No, then time range functionality is disabled, but you can use time hierarchies in the view.

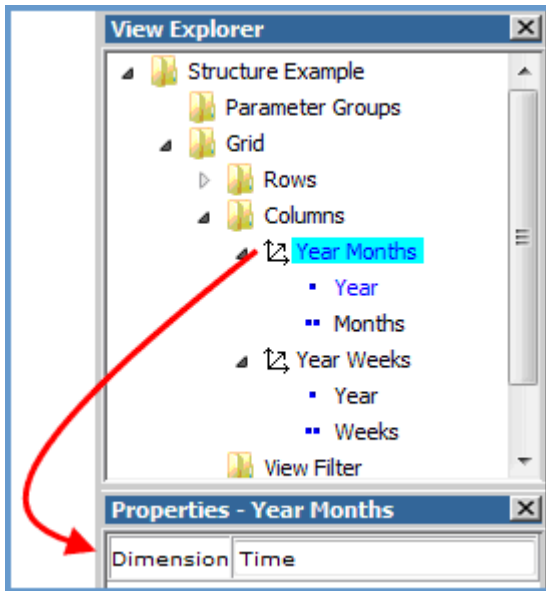

The regular measure items in the following view are based on Daily Sales measures and have a time range of Week 37 through 38 of 2014.

View Name: <i>Daily Sales by Customer Type</i>

Time Hierarchy

A time hierarchy is a hierarchy from the Time dimension. The Time dimension, its hierarchies, and its levels are a means of organizing the years and time periods (for example, days, weeks, months, and quarters) that will be available for use in setting up views. Stratum.Connector for Viewer creates the Time dimension, its hierarchies, and levels based on the Stratum.Server ViewGroups and View Sets associated with the measure groups selected for your Analysis Services database.

There are two time hierarchies in this example, and both belong to the Time dimension. The Year Months hierarchy (↕) has Year (▪) and Months (▪▪) levels. The Year Weeks hierarchy (↕) has Year (▪) and Weeks (▪▪) levels. Other examples of time hierarchies are Year Based Months Based, Rolling Year Based Months Based, and Months.

Time Range

Time ranges are slices of time that you can specify for measure items in your views. The Time Range property within each view controls whether or not time ranges will be available for use with the view measure items. The property within a view needs to be Yes for time range functionality to be enabled in the view. Time ranges consist of a time unit (period, days, weeks, months, etc.), a From Year and Period, a To Year and Period, and an [Offset property](#). A time range can span short or long units of time, for example, the current day, the months in the current year up to the current month, or multiple years.

The time range for the measure items in this example returns the sum of the Budget Amount and Units Frozen for the next 6 months -- the current month and next 5 months after it.

The screenshot shows a dialog box titled "INSERT MEASURE ITEM" with a search bar containing "budget". Below the search bar is a table with two columns: "Category" and "Measure". The table lists 12 items, with the first four highlighted in blue. Below the table is a pagination control showing "1 to 12 of 12" and navigation arrows. At the bottom of the dialog is a section for configuring the time range, which is highlighted with a red border. This section includes a "Time Unit" dropdown set to "Months", and two columns of "From Year", "To Year", "Period", and "Offset" fields. The "From Year" and "To Year" are both set to "Current Year", "Period" is "Current Month", and "Offset" is "0" for the left column and "5" for the right column. At the very bottom are buttons for "OK", "Add", "Exit", and "Help".
